This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

Preface

Oracle Application Express API Reference describes the Application Programming Interfaces, referred to as APIs, available when programming in the Oracle Application Express environment.

This preface contains these topics:

- Topic Overview
- Audience
- Documentation Accessibility
- Related Documents
- Conventions

Topic Overview

This document contains the following chapters:

Title	Description
APEX_UTIL	Use the APEX_UTIL package to get and set session state, get files, check authorizations for users, reset different states for users, and also to get and set preferences for users.
APEX_MAIL	Use the APEX_MAIL package to send an email from an Oracle Application Express application.
APEX_ITEM	Use the APEX_ITEM package to create form elements dynamically based on a SQL query instead of creating individual items page by page.
APEX_APPLICATION	Use the APEX_APPLICATION package to take advantage of a number of global variables.
APEX_CUSTOM_AUTH	Use the APEX_CUSTOM_AUTH package to perform various operations related to authentication and session management.
APEX_LDAP	Use APEX_LDAP to perform various operations related to Lightweight Directory Access Protocol (LDAP) authentication.
APEX_INSTANCE_ADMIN	Use the APEX_INSTANCE_ADMIN package to get and set email settings, wallet settings, report printing settings and to manage schema to workspace mappings.

Title	Description
APEX_UI_DEFAULT_UPDATE	You can use the APEX_UI_DEFAULT_UPDATE package to set the user interface defaults associated with a table within a schema. The package must be called from within the schema that owns the table you are updating.
JavaScript APIs	Use these JavaScript functions and objects to provide client-side functionality, such as showing and hiding page elements, or making XML HTTP Asynchronous JavaScript and XML (AJAX) requests.
APEX_PLSQL_JOB	Use APEX_PLSQL_JOB package to run PL/SQL code in the background of your application. This is an effective approach for managing long running operations that do not need to complete for a user to continue working with your application.
APEX_LANG	Use APEX_LANG API to translate messages.

Note: In release 2.2, Oracle Application Express APIs were renamed using the prefix APEX_. Note that API's using the previous prefix HTMLDB_ are still supported to provide backward compatibility. As a best practice, however, use the new API names for new applications unless you plan to run them in an earlier version of Oracle Application Express.

Audience

Oracle Application Express API Reference is intended for application developers who are building database-centric Web applications using Oracle Application Express. The guide describes the APIs available when programming in the Oracle Application Express environment.

To use this guide, you need to have a general understanding of relational database concepts as well as an understanding of the operating system environment under which you are running Oracle Application Express.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at

http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit

http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an

otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

For additional application examples, go to the Learning Library. Search for free online training content, including Oracle by Example (OBE), demos, and tutorials. To access the Oracle Learning Library, go to:

http://www.oracle.com/technetwork/tutorials/index.html

Printed documentation is available for sale in the Oracle Store at

```
http://shop.oracle.com/
```

If you already have a user name and password for OTN, then you can go directly to the documentation section of the OTN web site at

http://www.oracle.com/technology/documentation/

Conventions

For a description of PL/SQL subprogram conventions, refer to the *Oracle Database PL/SQL Language Reference*. This document contains the following information:

- Specifying subprogram parameter modes
- Specifying default values for subprogram parameters
- Overloading PL/SQL subprogram Names

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
italic	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

APEX_UTIL

The APEX_UTIL package provides utilities you can use when programming in the Oracle Application Express environment. You can use the APEX_UTIL package to get and set session state, get files, check authorizations for users, reset different states for users, get and purge cache information and also to get and set preferences for users.

Topics in this section include:

- CACHE_GET_DATE_OF_PAGE_CACHE Function
- CACHE_GET_DATE_OF_REGION_CACHE Function

CACHE_GET_DATE_OF_PAGE_CACHE Function

This function returns the date and time a specified application page was cached either for the user issuing the call, or for all users if the page was not set to be cached by user.

Syntax

```
APEX_UTIL.CACHE_GET_DATE_OF_PAGE_CACHE (
   p_application IN NUMBER,
   p_page IN NUMBER)
RETURN DATE;
```

Parameters

Table 1–1 describes the parameters available in the CACHE_GET_DATE_OF_PAGE_ CACHE procedure.

Table 1–1 CACHE_GET_DATE_OF_PAGE_CACHE Parameters

Parameter	Description
p_application	The identification number (ID) of the application.
p_page	The page number (ID).

Example

The following example demonstrates how to use the CACHE_GET_DATE_OF_PAGE_ CACHE function to retrieve the cache date and time for page 9 of the currently executing application. If page 9 has been cached, the cache date and time is output using the HTP package. The page could have been cached either by the user issuing the call, or for all users if the page was not to be cached by the user.

```
DECLARE
   1_cache_date DATE DEFAULT NULL;
BEGIN
   1_cache_date := APEX_UTIL.CACHE_GET_DATE_OF_PAGE_CACHE(
                       p_application => :APP_ID,
                       p_page => 9);
   IF l_cache_date IS NOT NULL THEN
       HTP.P('Cached on ' | TO_CHAR(l_cache_date, 'DD-MON-YY HH24:MI:SS'));
   END IF;
END;
```

CACHE_GET_DATE_OF_REGION_CACHE Function

This function returns the date and time a specified region was cached either for the user issuing the call, or for all users if the page was not set to be cached by user.

Syntax

```
APEX_UTIL.CACHE_GET_DATE_OF_REGION_CACHE (
    p_application IN NUMBER,
    p_page IN NUMBER,
    p_region_name IN VARCHAR2)
RETURN DATE;
```

Parameters

Table 1–2 describes the parameters available in the CACHE_GET_DATE_OF_REGION_CACHE function.

Table 1-2 CACHE_GET_DATE_OF_REGION_CACHE Parameters

Parameter	Description
p_application	The identification number (ID) of the application
p_page	The page number (ID)
p_region_name	The region name

Example

The following example demonstrates how to use the CACHE_GET_DATE_OF_REGION_CACHE function to retrieve the cache date and time for the region named Cached Region on page 13 of the currently executing application. If the region has been cached, the cache date and time is output using the HTP package. The region could have been cached either by the user issuing the call, or for all users if the page was not to be cached by user.

CACHE_PURGE_BY_APPLICATION Procedure

This procedure purges all cached pages and regions for a given application.

Syntax

```
APEX_UTIL.CACHE_PURGE_BY_APPLICATION (
   p_application IN NUMBER);
```

Parameters

Table 1-3 describes the parameters available in the CACHE_PURGE_BY_APPLICATION procedure.

Table 1–3 CACHE_PURGE_BY_APPLICATION Parameters

Parameter	Description
p_application	The identification number (ID) of the application.

Example

The following example demonstrates how to use the CACHE_PURGE_BY_ APPLICATION procedure to purge all the cached pages and regions for the application currently executing.

```
BEGIN
   APEX_UTIL.CACHE_PURGE_BY_APPLICATION(p_application => :APP_ID);
END;
```

CACHE_PURGE_BY_PAGE Procedure

This procedure purges the cache for a given application and page. If the page itself is not cached but contains one or more cached regions, then the cache for these will also be purged.

Syntax

```
APEX_UTIL.CACHE_PURGE_BY_PAGE (
    p_application IN NUMBER,
    p_page IN NUMBER,
    p_user_name IN VARCHAR2 DEFAULT NULL);
```

Parameters

Table 1–4 describes the parameters available in the CACHE_PURGE_BY_PAGE procedure.

Table 1-4 CACHE_PURGE_BY_PAGE Parameters

Parameter	Description
p_application	The identification number (ID) of the application.
p_page	The page number (ID).
p_user_name	The user associated with cached pages and regions.

Example

The following example demonstrates how to use the CACHE_PURGE_BY_PAGE procedure to purge the cache for page 9 of the application currently executing. Additionally, if the p_user_name parameter is supplied, this procedure would be further restricted by a specific users cache (only relevant if the cache is set to be by user).

CACHE_PURGE_STALE Procedure

This procedure deletes all cached pages and regions for a specified application that have passed the defined active time period. When you cache a page or region, you specify an active time period (or Cache Timeout). Once that period has passed, the cache will no longer be used, thus removing those unusable pages or regions from the cache.

Syntax 1 4 1

```
APEX_UTIL.CACHE_PURGE_STALE (
   p_application IN NUMBER);
```

Parameters

Table 1–5 describes the parameters available in the CACHE_PURGE_STALE procedure.

Table 1–5 CACHE_PURGE_STALE Parameters

Parameter	Description
p_application	The identification number (ID) of the application.

Example

The following example demonstrates how to use the CACHE_PURGE_STALE procedure to purge all the stale pages and regions in the application currently executing.

```
BEGIN
    APEX_UTIL.CACHE_PURGE_STALE(p_application => :APP_ID);
END;
```

CHANGE_CURRENT_USER_PW Procedure

This procedure changes the password of the currently authenticated user, assuming Application Express user accounts are in use.

Syntax

```
APEX_UTIL.CHANGE_CURRENT_USER_PW(
   p_new_password IN VARCHAR2);
```

Parameters

Table 1–6 describes the parameters available in the CHANGE_CURRENT_USER_PW procedure.

Table 1-6 CHANGE_CURRENT_USER_PW Parameters

Parameter	Description
p_new_password	The new password value in clear text

Example

The following example demonstrates how to use the CHANGE_CURRENT_USER_PW procedure to change the password for the user who is currently authenticated, assuming Application Express accounts are in use.

```
BEGIN
    APEX_UTIL.CHANGE_CURRENT_USER_PW ('secret99');
END;
```

See Also: "RESET_PW Procedure" on page 1-88

CHANGE_PASSWORD_ON_FIRST_USE Function

Enables a developer to check whether this property is enabled or disabled for an end user account. This function returns true if the account password must be changed upon first use (after successful authentication) after the password is initially set and after it is changed on the Administration Service, Edit User page. This function returns false if the account does not have this property.

This function may be run in a page request context by any authenticated user.

Syntax 1 4 1

```
APEX_UTIL.CHANGE_PASSWORD_ON_FIRST_USE (
    p_user_name IN VARCHAR2)
RETURN BOOLEAN;
```

Parameters

Table 1–7 describes the parameters available in the CHANGE_PASSWORD_ON_FIRST_ USE function.

Table 1–7 CHANGE_PASSWORD_ON_FIRST_USE Parameters

Parameter	Description
p_user_name	The user name of the user account

Example

The following example demonstrates how to use the CHANGE_PASSWORD_ON_FIRST_ USE function. Use this function to check if the password of an Application Express user account (workspace administrator, developer, or end user) in the current workspace must be changed by the user the first time it is used.

```
FOR c1 IN (SELECT user name FROM wwv flow users) LOOP
        IF APEX_UTIL.CHANGE_PASSWORD_ON_FIRST_USE(p_user_name => c1.user_name)
THEN
            htp.p('User:'||c1.user_name||' requires password to be changed the
first time it is used.');
       END IF;
    END LOOP;
END:
```

See Also: "PASSWORD_FIRST_USE_OCCURRED Function" on page 1-77

CLEAR_APP_CACHE Procedure

This procedure removes session state for a given application for the current session.

Syntax

Parameters

Table 1–8 describes the parameters available in the CLEAR_APP_CACHE procedure.

Table 1-8 CLEAR_APP_CACHE Parameters

Parameter	Description
p_app_id	The ID of the application for which session state will be cleared for current session

Example

The following example demonstrates how to use the CLEAR_APP_CACHE procedure to clear all the current sessions state for the application with an ID of 100.

```
BEGIN
    APEX_UTIL.CLEAR_APP_CACHE('100');
END;
```

CLEAR_PAGE_CACHE Procedure

This procedure removes session state for a given page for the current session.

Syntax

```
APEX_UTIL.CLEAR_PAGE_CACHE (
   p_page IN NUMBER DEFAULT NULL);
```

Parameters

Table 1–9 describes the parameters available in the CLEAR_PAGE_CACHE procedure.

Table 1–9 CLEAR_PAGE_CACHE Parameters

Parameter	Description
p_page	The ID of the page in the current application for which session state will be cleared for current session.

Example

The following example demonstrates how to use the CLEAR_PAGE_CACHE procedure to clear the current session s state for the page with an ID of 10.

```
BEGIN
   APEX_UTIL.CLEAR_PAGE_CACHE('10');
END;
```

CLEAR_USER_CACHE Procedure

This procedure removes session state and application system preferences for the current user's session. Run this procedure if you reuse session IDs and want to run applications without the benefit of existing session state.

Syntax

APEX_UTIL.CLEAR_USER_CACHE;

Parameters

None.

Example

The following example demonstrates how to use the CLEAR_USER_CACHE procedure to clear all session state and application system preferences for the current user's session.

```
BEGIN

APEX_UTIL.CLEAR_USER_CACHE;
END;
```

COUNT_CLICK Procedure

This procedure counts clicks from an application built in Application Builder to an external site. You can also use the shorthand version, procedure Z, in place of APEX_ UTIL.COUNT CLICK.

Syntax

```
APEX_UTIL.COUNT_CLICK (
   p_cat IN VARCHAR2,
p_id IN VARCHAR2 DEFAULT NULL,
p_user IN VARCHAR2 DEFAULT NULL,
   p_workspace IN VARCHAR2 DEFAULT NULL);
```

Parameters

Table 1–10 describes the parameters available in the COUNT_CLICK procedure.

Table 1–10 COUNT_CLICK Parameters

Parameter	Description
p_url	The URL to which to redirect
p_cat	A category to classify the click
p_id	Secondary ID to associate with the click (optional)
p_user	The application user ID (optional)
p_workspace	The workspace associated with the application (optional)

Example

The following example demonstrates how to use the COUNT_CLICK procedure to log how many user's click on the http://yahoo.com link specified. Note that once this information is logged, you can view it via the APEX_WORKSPACE_CLICKS view and in the reports on this view available to workspace and site administrators.

```
DECLARE
   1_url VARCHAR2(255);
    1_cat VARCHAR2(30);
   1_workspace_id VARCHAR2(30);
   l_url := 'http://yahoo.com';
   l_cat := 'yahoo';
   1_workspace_id := TO_CHAR(APEX_UTIL.FIND_SECURITY_GROUP_ID('MY_WORKSPACE'));
    HTP.P('<a href=APEX_UTIL.COUNT_CLICK?p_url=' || 1_url || '&p_cat=' || 1_cat ||
'&p_workspace=' || l_workspace_id || '>Click</a>');
END;
```

"FIND_SECURITY_GROUP_ID Function" on page 1-43 in this document and "Purging the External Click Count Log" in Oracle Application Express Administration Guide

CREATE_USER Procedure

This procedure creates a new account record in the Application Express user account table. To execute this procedure, the current user must have administrative privileges.

Syntax

-				
APEX_UTIL.CREATE_USER(
p_user_id	IN	NUMBER	DEFAULT	NULL,
p_user_name	IN	VARCHAR2,		
p_first_name	IN	VARCHAR2	DEFAULT	NULL,
p_last_name	IN	VARCHAR2	DEFAULT	NULL,
p_description	IN	VARCHAR2	DEFAULT	NULL,
p_email_address	IN	VARCHAR2	DEFAULT	NULL,
p_web_password	IN	VARCHAR2,		
p_web_password_format	IN	VARCHAR2	DEFAULT	'CLEAR_TEXT',
p_group_ids	IN	VARCHAR2	DEFAULT	NULL,
p_developer_privs	IN	VARCHAR2	DEFAULT	NULL,
p_default_schema	IN	VARCHAR2	DEFAULT	NULL,
<pre>p_allow_access_to_schemas</pre>	IN	VARCHAR2	DEFAULT	NULL,
p_account_expiry	IN	DATE	DEFAULT	TRUNC(SYSDATE),
p_account_locked	IN	VARCHAR2	DEFAULT	'N',
<pre>p_failed_access_attempts</pre>	IN	NUMBER	DEFAULT	0,
<pre>p_change_password_on_first_use</pre>	IN	VARCHAR2	DEFAULT	'Υ',
<pre>p_first_password_use_occurred</pre>	IN	VARCHAR2	DEFAULT	'N',
p_attribute_01	IN	VARCHAR2	DEFAULT	NULL,
p_attribute_02	IN	VARCHAR2	DEFAULT	NULL,
p_attribute_03	IN	VARCHAR2	DEFAULT	NULL,
p_attribute_04	IN	VARCHAR2	DEFAULT	NULL,
p_attribute_05	IN	VARCHAR2	DEFAULT	NULL,
p_attribute_06	IN	VARCHAR2	DEFAULT	NULL,
p_attribute_07	IN	VARCHAR2	DEFAULT	NULL,
p_attribute_08	IN	VARCHAR2	DEFAULT	NULL,
p_attribute_09	IN	VARCHAR2	DEFAULT	NULL,
p_attribute_10	IN	VARCHAR2	DEFAULT	NULL);

Parameters

Table 1–11 describes the parameters available in the CREATE_USER procedure.

Table 1–11 CREATE_USER Procedure Parameters

Parameter	Description
p_user_id	Numeric primary key of user account
p_user_name	Alphanumeric name used for login
p_first_name	Informational
p_last_name	Informational
p_description	Informational
p_email_address	Email address
p_web_password	Clear text password
p_web_password_format	If the value your passing for the p_web_password parameter is in clear text format then use CLEAR_TEXT, otherwise use HEX_ENCODED_DIGEST_V2.
p_group_ids	Colon separated list of numeric group IDs

Table 1-11 (Cont.) CREATE_USER Procedure Parameters

Parameter	Description
p_developer_privs	Colon separated list of developer privileges. The following are acceptable values for this parameter:
	null - To create an end user (a user who can only authenticate to developed applications).
	CREATE:DATA_LOADER:EDIT:HELP:MONITOR:SQL - To create a user with developer privilege.
	ADMIN:CREATE:DATA_ LOADER:EDIT:HELP:MONITOR:SQL - To create a user with full workspace administrator and developer privilege.
	Note: Currently this parameter is named inconsistently between the CREATE_USER, EDIT_USER and FETCH_USER APIs, although they all relate to the DEVELOPER_ROLE field stored in the named user account record. CREATE_USER uses p_developer_privs, EDIT_USER uses p_developer_roles and FETCH_USER uses p_developer_role.
p_default_schema	A database schema assigned to the user's workspace, used by default for browsing.
<pre>p_allow_access_to_ schemas</pre>	Colon separated list of schemas assigned to the user's workspace to which the user is restricted (leave null for all).
p_account_expiry	Date password was last updated, which will default to today's date on creation.
p_account_locked	'Y' or 'N' indicating if account is locked or unlocked.
<pre>p_failed_access_ attempts</pre>	Number of consecutive login failures that have occurred, defaults to 0 on creation.
<pre>p_change_password_on_ first_use</pre>	$^\prime Y^\prime$ or $^\prime N^\prime$ to indicate whether password must be changed on first use, defaults to $^\prime Y^\prime$ on creation.
<pre>p_first_password_use_ occurred</pre>	$^\prime \! Y^\prime$ or $^\prime \! N^\prime$ to indicate whether login has occurred since password change, defaults to $^\prime \! N^\prime$ on creation.
p_attribute_01	Arbitrary text accessible with an API
p_attribute_10	

Example 1

The following simple example creates an 'End User' called 'NEWUSER1' with a password of 'secret99'. Note an 'End User' can only authenticate to developed applications.

```
BEGIN
   APEX_UTIL.CREATE_USER(
      p_user_name => 'NEWUSER1',
       p_web_password => 'secret99');
END;
```

Example 2

The following example creates a 'Workspace Administrator' called 'NEWUSER2'. Where the user 'NEWUSER2':

Has full workspace administration and developer privilege (p_developer_ privs parameter set to 'ADMIN: CREATE: DATA_ LOADER: EDIT: HELP: MONITOR: SQL').

- Has access to 2 schemas, both their browsing default 'MY_SCHEMA' (p_default_schema parameter set to 'MY_SCHEMA') and also 'MY_SCHEMA2' (p_allow_access_to_schemas parameter set to 'MY_SCHEMA2').
- Does not have to change their password when they first login (p_change_password_on_first_use parameter set to 'N').
- Has their phone number stored in the first additional attribute (p_attribute_01 parameter set to '123 456 7890').

```
BEGIN
    APEX_UTIL.CREATE_USER(
        p_user_name
p_first_name
                                              => 'NEWUSER2',
                                             => 'FRANK',
         p_last_name
                                              => 'SMITH',
         p_description
        p_description => 'Description...',
p_email_address => 'frank@smith.com',
p_web_password => 'password',
p_developer_privs => 'ADMIN:CREATE:DATA
                                             => 'ADMIN:CREATE:DATA
LOADER: EDIT: HELP: MONITOR: SQL',
         p_default_schema => 'MY_SCHEMA',
p_allow_access_to_schemas => 'MY_SCHEMA2',
        p_default_schema
         p_change_password_on_first_use => 'N',
         p_attribute_01
                                              => '123 456 7890');
END;
```

See Also: "FETCH_USER Procedure Signature 3" on page 1-40, "EDIT_USER Procedure" on page 1-26, and "GET_GROUP_ID Function" on page 1-58

CREATE_USER_GROUP Procedure

Assuming you are using Application Express authentication, this procedure creates a user group. To execute this procedure, the current user must have administrative privileges in the workspace.

Syntax 1 4 1

```
APEX_UTIL.CREATE_USER_GROUP(
    X_UTIL.CKEATE_USER_GROOF,

p_id IN

p_group_name IN
                                                          NUMBER,
   p_id
                                                          VARCHAR2,
    p_group_name IN
p_security_group_id IN
p_group_desc IN
                                                          NUMBER,
                                                          VARCHAR2);
```

Parameter

Table 1–12 describes the parameters available in the CREATE_USER_GROUP procedure.

Table 1–12 CREATE_USER_GROUP Parameters

Parameter	Description
p_id	Primary key of group
p_group_name	Name of group
p_security_group_id	Workspace ID
p_group_desc	Descriptive text

Example

The following example demonstrates how to use the CREATE_USER_GROUP procedure to create a new group called 'Managers' with a description of 'text'. Pass null for the p_ id parameter to allow the database trigger to assign the new primary key value. Pass null for the p_security_group_id parameter to default to the current workspace ID.

```
BEGIN
   APEX_UTIL.CREATE_USER_GROUP (
      p_id => null, -- trigger will assign PK
p_group_name => 'Managers',
       p_security_group_id => null,
                                         -- defaults to current workspace ID
       p_group_desc => 'text');
END;
```

CURRENT_USER_IN_GROUP Function

This function returns a Boolean result based on whether or not the current user is a member of the specified group. You can use the group name or group ID to identify the group.

Syntax

Parameters

Table 1–13 describes the parameters available in the CURRENT_USER_IN_GROUP function.

Table 1–13 CURRENT_USER_IN_GROUP Parameters

Parameter	Description
p_group_name	Identifies the name of an existing group in the workspace
p_group_id	Identifies the numeric ID of an existing group in the workspace

Example

The following example demonstrates how to use the CURRENT_USER_IN_GROUP function to check if the user currently authenticated belongs to the group 'Managers'.

DOWNLOAD_PRINT_DOCUMENT Procedure Signature 1

This procedure initiates the download of a print document using XML based report data (as a BLOB) and RTF or XSL-FO based report layout.

Syntax

```
APEX_UTIL.DOWNLOAD_PRINT_DOCUMENT (
 p_content_disposition IN VARCHAR,
 p_report_layout_type IN VARCHAR2 default 'xsl-fo',
```

Parameters

Table 1–14 describes the parameters available in the DOWNLOAD_PRINT_DOCUMENT procedure for Signature 1.

Table 1–14 DOWNLOAD_PRINT_DOCUMENT Parameters

Parameter	Description
p_file_name	Defines the filename of the print document
p_content_disposition	Specifies whether to download the print document or display inline ("attachment", "inline")
p_report_data	XML based report data
p_report_layout	Report layout in XSL-FO or RTF format
p_report_layout_type	Defines the report layout type, that is "xsl-fo" or "rtf"
p_document_format	Defines the document format, that is "pdf", "rtf", "xls", "htm", or "xml"
p_print_server	URL of the print server. If not specified, the print server will be derived from preferences.

See Also: "Printing Report Regions" in *Oracle Application Express* Application Builder User's Guide.

DOWNLOAD_PRINT_DOCUMENT Procedure Signature 2

This procedure initiates the download of a print document using pre-defined report query and RTF and XSL-FO based report layout.

Syntax

Parameters

Table 1–15 describes the parameters available in the DOWNLOAD_PRINT_DOCUMENT function.

Table 1–15 DOWNLOAD_PRINT_DOCUMENT Parameters

Parameter	Description
p_file_name	Defines the filename of the print document
p_content_disposition	Specifies whether to download the print document or display inline ("attachment", "inline")
p_application_id	Defines the application ID of the report query
p_report_query_name	Name of the report query (stored under application's Shared Components)
p_report_layout	Report layout in XSL-FO or RTF format
p_report_layout_type	Defines the report layout type, that is "xsl-fo" or "rtf"
p_document_format	Defines the document format, that is "pdf", "rtf", "xls", "htm", or "xml"
p_print_server	URL of the print server. If not specified, the print server will be derived from preferences.

Example for Signature 2

The following example shows how to use the DOWNLOAD_PRINT_DOCUMENT using Signature 2 (Pre-defined report query and RTF or XSL-FO based report layout.). In this example, the data for the report is taken from a Report Query called 'ReportQueryAndXSL' stored in the current application's Shared Components > Report Queries. The report layout is taken from a value stored in a page item (P1_XSL).

```
BEGIN

APEX_UTIL.DOWNLOAD_PRINT_DOCUMENT (

p_file_name => 'mydocument',

p_content_disposition => 'attachment',

p_application_id => :APP_ID,

p_report_query_name => 'ReportQueryAndXSL',

p_report_layout => :P1_XSL,
```

```
p_report_layout_type => 'xsl-fo',
       p_document_format => 'pdf');
END;
```

See Also: "Printing Report Regions" in *Oracle Application Express* Application Builder User's Guide.

DOWNLOAD_PRINT_DOCUMENT Procedure Signature 3

This procedure initiates the download of a print document using pre-defined report query and pre-defined report layout.

Syntax

Parameters

Table 1–16 describes the parameters available in the DOWNLOAD_PRINT_DOCUMENT procedure for Signature 3.

Table 1–16 DOWNLOAD_PRINT_DOCUMENT Parameters

Parameter	Description
p_file_name	Defines the filename of the print document
p_content_disposition	Specifies whether to download the print document or display inline ("attachment", "inline")
p_application_id	Defines the application ID of the report query
p_report_query_name	Name of the report query (stored under application's Shared Components)
p_report_layout_name	Name of the report layout (stored under application's Shared Components)
p_report_layout_type	Defines the report layout type, that is "xsl-fo" or "rtf"
p_document_format	Defines the document format, that is "pdf", "rtf", "xls", "htm", or "xml"
p_print_server	URL of the print server. If not specified, the print server will be derived from preferences.

Example for Signature 3

The following example shows how to use the DOWNLOAD_PRINT_DOCUMENT using Signature 3 (Pre-defined report query and pre-defined report layout). In this example, the data for the report is taken from a Report Query called 'ReportQuery' stored in the current application's Shared Components > Report Queries. The report layout is taken from a Report Layout called 'ReportLayout' stored in the current application's Shared Components > Report Layouts. Note that if you wish to provision dynamic layouts, instead of specifying 'ReportLayout' for the p_report_layout_name parameter, you could reference a page item that allowed the user to select one of multiple saved Report Layouts. This example also provides a way for the user to specify how they wish to receive the document (as an attachment or inline), through passing the value of P1_CONTENT_DISP to the p_content_disposition

parameter. P1_CONTENT_DISP is a page item of type 'Select List' with the following List of Values Definition:

```
STATIC2:In Browser;inline, Save / Open in separate Window;attachment
   APEX_UTIL.DOWNLOAD_PRINT_DOCUMENT (
      p_file_name => 'myreport123',
      p_content_disposition => :P1_CONTENT_DISP,
      p_application_id => :APP_ID,
      p_report_query_name => 'ReportQuery',
      p_report_layout_name => 'ReportLayout',
       p_report_layout_type => 'rtf',
       p_document_format => 'pdf');
END;
```

See Also: "Printing Report Regions" in *Oracle Application Express* Application Builder User's Guide.

DOWNLOAD_PRINT_DOCUMENT Procedure Signature 4

This procedure initiates the download of a print document using XML based report data (as a CLOB) and RTF or XSL-FO based report layout.

Syntax

Parameters

Table 1–16 describes the parameters available in the DOWNLOAD_PRINT_DOCUMENT procedure for Signature 4.

Table 1–17 DOWNLOAD_PRINT_DOCUMENT Parameters

Parameter	Description
p_file_name	Defines the filename of the print document
p_content_disposition	Specifies whether to download the print document or display inline ("attachment", "inline")
p_report_data	XML based report data, must be encoded in UTF-8
p_report_layout	Report layout in XSL-FO or RTF format
p_report_layout_type	Defines the report layout type, that is "xsl-fo" or "rtf"
p_document_format	Defines the document format, that is "pdf", "rtf", "xls", "htm", or "xml"
p_print_server	URL of the print server. If not specified, the print server will be derived from preferences.

Example for Signature 4

The following example shows how to use the DOWNLOAD_PRINT_DOCUMENT using Signature 4 (XML based report data (as a CLOB) and RTF or XSL-FO based report layout). In this example both the report data (XML) and report layout (XSL-FO) are taken from values stored in page items.

See Also: "Printing Report Regions" in *Oracle Application Express Application Builder User's Guide.*

EDIT_USER Procedure

This procedure enables a user account record to be altered. To execute this procedure, the current user must have administrative privileges in the workspace.

Syntax

APEX_UTIL.EDIT_USER (
p_user_id	IN	NUMBER,		
p_user_name	IN	VARCHAR2,		
p_first_name	IN	VARCHAR2	DEFAULT	NULL,
p_last_name	IN	VARCHAR2	DEFAULT	NULL,
p_web_password	IN	VARCHAR2	DEFAULT	NULL,
p_new_password	IN	VARCHAR2	DEFAULT	NULL,
p_email_address	IN	VARCHAR2	DEFAULT	NULL,
p_start_date	IN	VARCHAR2	DEFAULT	NULL,
p_end_date	IN	VARCHAR2	DEFAULT	NULL,
p_employee_id	IN	VARCHAR2	DEFAULT	NULL,
p_allow_access_to_schemas	IN	VARCHAR2	DEFAULT	NULL,
<pre>p_person_type</pre>	IN	VARCHAR2	DEFAULT	NULL,
<pre>p_default_schema</pre>	IN	VARCHAR2	DEFAULT	NULL,
p_group_ids	IN	VARCHAR2	DEFAULT	NULL,
p_developer_roles	IN	VARCHAR2	DEFAULT	NULL,
p_description	IN	VARCHAR2	DEFAULT	NULL,
p_account_expiry	IN	DATE	DEFAULT	NULL,
p_account_locked	IN	VARCHAR2	DEFAULT	'N',
<pre>p_failed_access_attempts</pre>	IN	NUMBER	DEFAULT	0,
<pre>p_change_password_on_first_use</pre>	IN	VARCHAR2	DEFAULT	'Υ',
<pre>p_first_password_use_occurred</pre>	IN	VARCHAR2	DEFAULT	'N');

Parameters

Table 1–18 describes the parameters available in the EDIT_USER procedure.

Table 1–18 EDIT_USER Parameters

Parameter	Description
p_user_id	Numeric primary key of the user account
p_user_name	Alphanumeric name used for login.
	See Also: "SET_USERNAME Procedure" on page 1-103
p_first_name	Informational.
	See Also: "SET_FIRST_NAME Procedure" on page 1-95
p_last_name	Informational.
	See Also: "SET_LAST_NAME Procedure" on page 1-96
p_web_password	Clear text password. If using this procedure to update the password for the user, values for both p_web_ password and p_new_password must not be null and must be identical.
p_new_password	Clear text new password. If using this procedure to update the password for the user, values for both p_web_password and p_new_password must not be null and must be identical.
p_email_address	Informational.
	See Also: "SET_EMAIL Procedure" on page 1-94

Table 1–18 (Cont.) EDIT_USER Parameters

Parameter	Description
p_start_date	Unused
p_end_date	Unused
p_employee_id	Unused
p_allow_access_to_schemas	A list of schemas assigned to the user's workspace to which the user is restricted
p_person_type	Unused
p_default_schema	A database schema assigned to the user's workspace, used by default for browsing
p_group_ids	Colon-separated list of numeric group IDs
p_developer_roles	Colon-separated list of developer privileges. The following are acceptable values for this parameter:
	•null - To update the user to be an end user (a user who can only authenticate to developed applications)
	·CREATE:DATA_ LOADER:EDIT:HELP:MONITOR:SQL - To update the user to have developer privilege
	•ADMIN:CREATE:DATA_ LOADER:EDIT:HELP:MONITOR:SQL - To update the user to have full workspace administrator and developer privilege
	Note: Currently this parameter is named inconsistently between the CREATE_USER, EDIT_USER and FETCH_USER APIs, although they all relate to the DEVELOPER_ROLE field stored in the named user account record. CREATE_USER uses p_developer_privs, EDIT_USER uses p_developer_roles and FETCH_USER uses p_developer_role.
	See Also: "GET_USER_ROLES Function" on page 1-70
p_description	Informational
p_account_expiry	Date password was last updated.
	See Also: "EXPIRE_END_USER_ACCOUNT Procedure" on page 1-31, "EXPIRE_WORKSPACE_ACCOUNT Procedure" on page 1-32, "UNEXPIRE_END_USER_ACCOUNT Procedure" on page 1-111, "UNEXPIRE_WORKSPACE_ACCOUNT Procedure" on page 1-112
p_account_locked	'Y' or 'N' indicating if account is locked or unlocked.
	See Also: "LOCK_ACCOUNT Procedure" on page 1-76, "UNLOCK_ACCOUNT Procedure" on page 1-113
p_failed_access_attempts	Number of consecutive login failures that have occurred.
<pre>p_change_password_on_first_ use</pre>	'Y' or 'N' to indicate whether password must be changed on first use.
	See Also: "CHANGE_PASSWORD_ON_FIRST_USE Function" on page 1-10
<pre>p_first_password_use_ occurred</pre>	'Y' or 'N' to indicate whether login has occurred since password change.
	See Also: "PASSWORD_FIRST_USE_OCCURRED Function" on page 1-77

Example

The following example shows how to use the EDIT_USER procedure to update a user account. This example shows how you can use the EDIT_USER procedure to change the user 'FRANK' from a user with just developer privilege to a user with workspace administrator and developer privilege. Firstly, the FETCH_USER procedure is called to assign account details for the user 'FRANK' to local variables. These variables are then used in the call to EDIT_USER to preserve the details of the account, with the exception of the value for the p_developer_roles parameter, which is set to 'ADMIN: CREATE: DATA_LOADER: EDIT: HELP: MONITOR: SQL'.

```
DECLARE
                                      NUMBER;
    l_user_id
                                      VARCHAR2 (255);
    l_workspace
    l_user_name
                                      VARCHAR2 (100);
    l_first_name
                                    VARCHAR2 (255);
    l_last_name
                                    VARCHAR2 (255);
    l_web_password
                                    VARCHAR2 (255);
    l_email_address
                                    VARCHAR2(240);

    p_user_id
                                      => 1 user id.
```

=> l_user_name,

p_user_name

See Also: "FETCH_USER Procedure Signature 3" on page 1-40

END_USER_ACCOUNT_DAYS_LEFT Function

Returns the number of days remaining before a end user account password expires. This function may be run in a page request context by any authenticated user.

Syntax

```
APEX_UTIL.END_USER_ACCOUNT_DAYS_LEFT (
   p_user_name IN VARCHAR2)
RETURN NUMBER;
```

Parameters

Table 1–19 describes the parameters available in the END_USER_ACCOUNT_DAYS_ LEFT function.

Table 1–19 END_USER_ACCOUNT_DAYS_LEFT Parameters

Parameter	Description
p_user_name	The user name of the user account

Example

The following example shows how to use the END_USER_ACCOUNT_DAYS_LEFT function. Use this function to determine the number of days remaining before an Application Express end user account in the current workspace will expire.

```
DECLARE
   l_days_left NUMBER;
BEGIN
    FOR c1 IN (SELECT user_name from wwv_flow_users) LOOP
        1_days_left := APEX_UTIL.END_USER_ACCOUNT_DAYS_LEFT(p_user_name =>
c1.user_name);
       htp.p('End User Account:'||c1.user_name||' will expire in '||l_days_
left||' days.');
    END LOOP:
END;
```

See Also: "EXPIRE_END_USER_ACCOUNT Procedure" on page 1-31 and "UNEXPIRE_END_USER_ACCOUNT Procedure" on page 1-111

EXPIRE_END_USER_ACCOUNT Procedure

Expires the login account for use as a workspace end user. Must be run by an authenticated workspace administrator in a page request context.

Syntax

```
APEX_UTIL.EXPIRE_END_USER_ACCOUNT (
    p_user_name IN VARCHAR2
    );
```

Parameters

Table 1–21 describes the parameters available in the EXPIRE_END_USER_ACCOUNT procedure.

Table 1-20 EXPIRE END USER_ACCOUNT Parameters

Parameter	Description
p_user_name	The user name of the user account

Example

The following example shows how to use the EXPIRE_END_USER_ACCOUNT procedure. Use this procedure to expire an Oracle Application Express account (workspace administrator, developer, or end user) in the current workspace. This action specifically expires the account with respect to its use by end users to authenticate to developed applications, but it may also expire the account with respect to its use by developers or administrators to log in to a workspace.

Note that this procedure must be run by a user having administration privileges in the current workspace.

```
BEGIN
    FOR c1 IN (select user_name from wwv_flow_users) LOOP
        APEX_UTIL.EXPIRE_END_USER_ACCOUNT(p_user_name => c1.user_name);
        htp.p('End User Account:'||c1.user_name||' is now expired.');
        END LOOP;
END;
```

See Also: "UNEXPIRE_END_USER_ACCOUNT Procedure" on page 1-111

EXPIRE_WORKSPACE_ACCOUNT Procedure

Expires developer or workspace administrator login accounts. Must be run by an authenticated workspace administrator in a page request context.

Syntax

```
APEX_UTIL.EXPIRE_WORKSPACE_ACCOUNT (
    p_user_name IN VARCHAR2
    );
```

Parameters

Table 1–21 describes the parameters available in the EXPIRE_WORKSPACE_ACCOUNT procedure.

Table 1–21 EXPIRE_WORKSPACE_ACCOUNT Parameters

Parameter	Description
p_user_name	The user name of the user account

Example

The following example shows how to use the EXPIRE_WORKSPACE_ACCOUNT procedure. Use this procedure to expire an Application Express account (workspace administrator, developer, or end user) in the current workspace. This action specifically expires the account with respect to its use by developers or administrators to log in to a workspace, but it may also expire the account with respect to its use by end users to authenticate to developed applications.

```
BEGIN
    FOR c1 IN (SELECT user_name FROM wwv_flow_users) LOOP
        APEX_UTIL.EXPIRE_WORKSPACE_ACCOUNT(p_user_name => c1.user_name);
        htp.p('Workspace Account:'||c1.user_name||' is now expired.');
    END LOOP;
END:
```

See Also: "UNEXPIRE_WORKSPACE_ACCOUNT Procedure" on page 1-112

EXPORT_USERS Procedure

When called from a page, this procedure produces an export file of the current workspace definition, workspace users, and workspace groups. To execute this procedure, the current user must have administrative privilege in the workspace.

Syntax 1 4 1

```
APEX_UTIL.EXPORT_USERS(
   p_export_format IN VARCHAR2 DEFAULT 'UNIX');
```

Parameters

Table 1–22 describes the parameters available in the EXPORT_USERS procedure.

Table 1-22 EXPORT_USERS Parameters

Parameter	Description
p_export_format	Indicates how rows in the export file will be formatted. Specify 'UNIX' to have the resulting file contain rows delimited by line feeds. Specify 'DOS' to have the resulting file contain rows delimited by carriage returns and line feeds

Example

The following example shows how to use the EXPORT_USERS procedure. Call this procedure from a page to produce an export file containing the current workspace definition, list of workspace users and list of workspace groups. The file will be formatted with rows delimited by line feeds.

```
BEGIN
    APEX_UTIL.EXPORT_USERS;
END;
```

FETCH_APP_ITEM Function

This function fetches session state for the current or specified application in the current or specified session.

Syntax

```
APEX_UTIL.FETCH_APP_ITEM(
   p_item IN VARCHAR2,
            IN NUMBER DEFAULT NULL,
   p_session IN NUMBER DEFAULT NULL)
RETURN VARCHAR2;
```

Parameters

Table 1–23 describes the parameters available in the FETCH_APP_ITEM function.

Table 1-23 FETCH_APP_ITEM Parameters

Parameter	Description
p_item	The name of an application-level item (not a page item) whose current value is to be fetched
p_app	The ID of the application that owns the item (leave null for the current application)
p_session	The session ID from which to obtain the value (leave null for the current session)

Example

The following example shows how to use the FETCH_APP_ITEM function to obtain the value of the application item 'F300_NAME' in application 300. As no value is passed for p_session, this defaults to the current session state value.

```
DECLARE
   VAL VARCHAR2(30);
BEGIN
   VAL := APEX_UTIL.FETCH_APP_ITEM(
       p_item => 'F300_NAME',
       p_app => 300);
END;
```

FETCH_USER Procedure Signature 1

This procedure fetches a user account record. To execute this procedure, the current user must have administrative privileges in the workspace. Three overloaded versions of this procedure exist, each with a distinct set of allowed parameters or signatures.

Syntax for Signature 1

APEX_UTIL.FETCH_USER (
p_user_id	IN	NUMBER,
p_workspace	OUT	VARCHAR2,
p_user_name	OUT	VARCHAR2,
p_first_name	OUT	VARCHAR2,
p_last_name	OUT	VARCHAR2,
p_web_password	OUT	VARCHAR2,
p_email_address	OUT	VARCHAR2,
p_start_date	OUT	VARCHAR2,
p_end_date	OUT	VARCHAR2,
p_employee_id	OUT	VARCHAR2,
p_allow_access_to_schemas	OUT	VARCHAR2,
p_person_type	OUT	VARCHAR2,
p_default_schema	OUT	VARCHAR2,
p_groups	OUT	VARCHAR2,
p_developer_role	OUT	VARCHAR2,
p_description	OUT	VARCHAR2);

Parameters for Signature 1

Table 1–24 describes the parameters available in the FETCH_USER procedure for signature 1.

Table 1–24 Fetch_User Parameters Signature 1

Parameter	Description
p_user_id	Numeric primary key of the user account
p_workspace	The name of the workspace
p_user_name	Alphanumeric name used for login.
	See Also: "GET_USERNAME Function" on page 1-71
p_first_name	Informational.
	See Also: "GET_FIRST_NAME Function" on page 1-56
p_last_name	Informational.
	See Also: "GET_LAST_NAME Function" on page 1-60
p_web_password	Obfuscated account password
p_email_address	Email address.
	See Also: "GET_EMAIL Function" on page 1-52
p_start_date	Unused
p_end_date	Unused
p_employee_id	Unused
<pre>p_allow_access_to_ schemas</pre>	A list of schemas assigned to the user's workspace to which user is restricted
p_person_type	Unused

Table 1-24 (Cont.) Fetch_User Parameters Signature 1

Parameter	Description
p_default_schema	A database schema assigned to the user's workspace, used by default for browsing.
	See Also: "GET_DEFAULT_SCHEMA Function" on page 1-51
p_groups	List of groups of which user is a member.
	See Also : "GET_GROUPS_USER_BELONGS_TO Function" on page 1-57 and "CURRENT_USER_IN_GROUP Function" on page 1-19
p_developer_role	Colon-separated list of developer roles. The following are acceptable values for this parameter:
	null - Indicates an end user (a user who can only authenticate to developed applications).
	CREATE: DATA_LOADER: EDIT: HELP: MONITOR: SQL - Indicates a user with developer privilege.
	ADMIN: CREATE: DATA_LOADER: EDIT: HELP: MONITOR: SQL - Indicates a user with full workspace administrator and developer privilege.
	Note: Currently this parameter is named inconsistently between the CREATE_USER, EDIT_USER and FETCH_USER APIs, although they all relate to the DEVELOPER_ROLE field stored in the named user account record. CREATE_USER uses p_developer_privs, EDIT_USER uses p_developer_roles and FETCH_USER uses p_developer_role.
	See Also: "GET_USER_ROLES Function" on page 1-70
p_description	Informational

Example for Signature 1

The following example shows how to use the FETCH_USER procedure with Signature 1. This procedure is passed the ID of the currently authenticated user for the only IN parameter p_user_id. The code then stores all the other OUT parameter values in local variables.

```
DECLARE

        1_workspace
        VARCHAR2 (255);

        1_user_name
        VARCHAR2 (100);

        1_first_name
        VARCHAR2 (255);

        1_last_name
        VARCHAR2 (255);

        1_web_password
        VARCHAR2 (255);

        1_email_address
        VARCHAR2 (240);

        1_start_date
        DATE;

        1_end_date
        DATE;

        1_employee_id

FETCH_USER Procedure Signature 2

This procedure fetches a user account record. To execute this procedure, the current user must have administrative privileges in the workspace. Three overloaded versions of this procedure exist, each with a distinct set of allowed parameters or signatures.

Syntax for Signature 2

APEX_UTIL.FETCH_USER (
p_user_id	IN	NUMBER,
p_user_name	OUT	VARCHAR2,
p_first_name	OUT	VARCHAR2,
p_last_name	OUT	VARCHAR2,
p_email_address	OUT	VARCHAR2,
p_groups	OUT	VARCHAR2,
<pre>p_developer_role</pre>	OUT	VARCHAR2,
p_description	OUT	VARCHAR2);

Parameters for Signature 2

Table 1–25 describes the parameters available in the FETCH_USER procedure for signature 2.

Table 1-25 Fetch_User Parameters Signature 2

Parameter	Description
p_user_id	Numeric primary key of the user account
p_user_name	Alphanumeric name used for login.
	See Also: "GET_USERNAME Function" on page 1-71
p_first_name	Informational.
	See Also: "GET_FIRST_NAME Function" on page 1-56
p_last_name	Informational.
	See Also: "GET_LAST_NAME Function" on page 1-60
p_email_address	Email address.
	See Also: "GET_EMAIL Function" on page 1-52
p_groups	List of groups of which user is a member.
	See Also: "GET_GROUPS_USER_BELONGS_TO Function" on page 1-57 and "CURRENT_USER_IN_GROUP Function" on page 1-19

Table 1–25 (Cont.) Fetch_User Parameters Signature 2

Parameter	Description
p_developer_role	Colon-separated list of developer roles. The following are acceptable values for this parameter:
	null - Indicates an end user (a user who can only authenticate to developed applications).
	CREATE: DATA_LOADER: EDIT: HELP: MONITOR: SQL - Indicates a user with developer privilege.
	ADMIN: CREATE: DATA_LOADER: EDIT: HELP: MONITOR: SQL - Indicates a user with full workspace administrator and developer privilege.
	Note: Currently this parameter is named inconsistently between the CREATE_USER, EDIT_USER and FETCH_USER APIs, although they all relate to the DEVELOPER_ROLE field stored in the named user account record. CREATE_USER uses p_developer_privs, EDIT_USER uses p_developer_roles and FETCH_USER uses p_developer_role.
	See Also: "GET_USER_ROLES Function" on page 1-70
p_description	Informational

Example for Signature 2

The following example shows how to use the FETCH_USER procedure with Signature 2. This procedure is passed the ID of the currently authenticated user for the only IN parameter p_user_id. The code then stores all the other OUT parameter values in local variables.

See Also: "EDIT_USER Procedure" on page 1-26 and "GET_CURRENT_USER_ID Function" on page 1-50

FETCH_USER Procedure Signature 3

This procedure fetches a user account record. To execute this procedure, the current user must have administrative privileges in the workspace. Three overloaded versions of this procedure exist, each with a distinct set of allowed parameters or signatures.

Syntax for Signature 3

APEX_UTIL.FETCH_USER (
p_user_id	IN	NUMBER,
p_workspace	OUT	VARCHAR2,
p_user_name	OUT	VARCHAR2,
p_first_name	OUT	VARCHAR2,
p_last_name	OUT	VARCHAR2,
p_web_password	OUT	VARCHAR2,
p_email_address	OUT	VARCHAR2,
p_start_date	OUT	VARCHAR2,
p_end_date	OUT	VARCHAR2,
p_employee_id	OUT	VARCHAR2,
p_allow_access_to_schemas	OUT	VARCHAR2,
p_person_type	OUT	VARCHAR2,
p_default_schema	OUT	VARCHAR2,
p_groups	OUT	VARCHAR2,
p_developer_role	OUT	VARCHAR2,
p_description	OUT	VARCHAR2,
p_account_expiry	OUT	DATE,
p_account_locked	OUT	VARCHAR2,
p_failed_access_attempts	OUT	NUMBER,
<pre>p_change_password_on_first_use</pre>	OUT	VARCHAR2,
p_first_password_use_occurred	OUT	VARCHAR2);

Parameters for Signature 3

Table 1–26 describes the parameters available in the FETCH_USER procedure.

Table 1-26 Fetch_User Parameters Signature 3

Parameter	Description
p_user_id	Numeric primary key of the user account
p_workspace	The name of the workspace
p_user_name	Alphanumeric name used for login.
	See Also: "GET_USERNAME Function" on page 1-71
p_first_name	Informational.
	See Also : "GET_FIRST_NAME Function" on page 1-56
p_last_name	Informational.
	See Also : "GET_LAST_NAME Function" on page 1-60
p_web_password	Obfuscated account password
p_email_address	Email address.
	See Also: "GET_EMAIL Function" on page 1-52
p_start_date	Unused
p_end_date	Unused

Table 1–26 (Cont.) Fetch_User Parameters Signature 3

Parameter	Description
p_employee_id	Unused
p_allow_access_to_schemas	A list of schemas assigned to the user's workspace to which user is restricted
p_person_type	Unused
p_default_schema	A database schema assigned to the user's workspace, used by default for browsing.
	See Also: "GET_DEFAULT_SCHEMA Function" on page 1-51
p_groups	List of groups of which user is a member.
	See Also: "GET_GROUPS_USER_BELONGS_TO Function" on page 1-57 and "CURRENT_USER_IN_GROUP Function" on page 1-19
p_developer_role	Colon-separated list of developer roles. The following are acceptable values for this parameter:
	null - Indicates an end user (a user who can only authenticate to developed applications).
	CREATE: DATA_ LOADER: EDIT: HELP: MONITOR: SQL - Indicates a user with developer privilege.
	ADMIN: CREATE: DATA_ LOADER: EDIT: HELP: MONITOR: SQL - Indicates a user with full workspace administrator and developer privilege.
	Note: Currently this parameter is named inconsistently between the CREATE_USER, EDIT_USER and FETCH_USER APIs, although they all relate to the DEVELOPER_ROLE field stored in the named user account record. CREATE_USER uses p_developer_privs, EDIT_USER uses p_developer_roles and FETCH_USER uses p_developer_role.
	See Also: "GET_USER_ROLES Function" on
	page 1-70
p_description	Informational
p_account_expiry	Date account password was last reset. See Also: "END_USER_ACCOUNT_DAYS_LEFT Function" on page 1-30 and "WORKSPACE_ACCOUNT_DAYS_LEFT Function" on page 1-116
p_account_locked	Locked/Unlocked indicator Y or N.
	See Also: "GET_ACCOUNT_LOCKED_STATUS Function" on page 1-45
p_failed_access_attempts	Counter for consecutive login failures
<pre>p_change_password_on_first_ use</pre>	Setting to force password change on first use Y or N
p_first_password_use_occurred	Indicates whether login with password occurred ${\tt Y}$ or ${\tt N}$

Example for Signature 3

The following example shows how to use the FETCH_USER procedure with Signature 3. This procedure is passed the ID of the currently authenticated user for the only IN parameter p_user_id. The code then stores all the other OUT parameter values in local variables.

```
DECLARE
                | Number | N
                    l_workspace
                                                                                                                                                                                             VARCHAR2 (255);
                     1_change_password_on_first_use VARCHAR2(1);
                     1_first_password_use_occurred VARCHAR2(1);
BEGIN
                     APEX_UTIL.FETCH_USER(
                                     => APEX_UTIL.GET_CURRENT_USER_ID,
                                       p_user_id
                                          p_change_password_on_first_use => l_change_password_on_first_use,
                                           p_first_password_use_occurred => l_first_password_use_occurred);
END:
```

See Also: "EDIT_USER Procedure" on page 1-26 and "GET_ CURRENT_USER_ID Function" on page 1-50

FIND_SECURITY_GROUP_ID Function

This function returns the numeric security group ID of the named workspace.

Syntax

```
APEX_UTIL.FIND_SECURITY_GROUP_ID(
    p_workspace IN VARCHAR2)
RETURN NUMBER;
```

Parameters

Table 1–27 describes the parameters available in the FIND_SECURITY_GROUP_ID function.

Table 1–27 FIND_SECURITY_GROUP_ID Parameters

Parameter	Description
p_workspace	The name of the workspace

Example

The following example demonstrates how to use the FIND_SECURITY_GROUP_ID function to return the security group ID for the workspace called 'DEMOS'.

```
DECLARE
    VAL NUMBER;
BEGIN
    VAL := APEX_UTIL.FIND_SECURITY_GROUP_ID (p_workspace=>'DEMOS');
END;
```

FIND_WORKSPACE Function

This function returns the workspace name associated with a security group ID.

Syntax

```
APEX_UTIL.FIND_WORKSPACE(
  RETURN VARCHAR2;
```

Parameters

Table 1–28 describes the parameters available in the FIND_WORKSPACE function.

Table 1–28 FIND_WORKSPACE Parameters

Parameter	Description
p_security_group_id	The security group ID of a workspace

Example

The following example demonstrates how to use the FIND_WORKSPACE function to return the workspace name for the workspace with a security group ID of 20.

```
DECLARE
   VAL VARCHAR2(255);
BEGIN
   VAL := APEX_UTIL.FIND_WORKSPACE (p_security_group_id =>'20');
END;
```

GET_ACCOUNT_LOCKED_STATUS Function

Returns TRUE if the account is locked and FALSE if the account is unlocked. Must be run by an authenticated workspace administrator in a page request context.

Syntax

```
APEX_UTIL.GET_ACCOUNT_LOCKED_STATUS (
    p_user_name IN VARCHAR2
    ) RETURN BOOLEAN;
```

Parameters

Table 1–29 describes the parameters available in the GET_ACCOUNT_LOCKED_STATUS function.

Table 1-29 GET_ACCOUNT_LOCKED_STATUS Parameters

Parameter	Description
p_user_name	The user name of the user account

Example

The following example shows how to use the GET_ACCOUNT_LOCKED_STATUS function. Use this function to check if an Application Express user account (workspace administrator, developer, or end user) in the current workspace is locked.

See Also: LOCK_ACCOUNT Procedure on page 1-76 and UNLOCK_ACCOUNT Procedure on page 1-113.

GET_ATTRIBUTE Function

This function returns the value of one of the attribute values (1 through 10) of a named user in the Application Express accounts table. Please note these are only accessible via the APIs.

Syntax

```
APEX_UTIL.GET_ATTRIBUTE(
     p_username IN VARCHAR2,
p_attribute_number IN NUMBER)
JRN VARCHAR2.
RETURN VARCHAR2;
```

Parameters

Table 1–30 describes the parameters available in the GET_ATTRIBUTE function.

Table 1–30 GET_ATTRIBUTE Parameters

Parameter	Description
p_username	User name in the account.
p_attribute_number	Number of attributes in the user record (1 through 10)

Example

The following example shows how to use the GET_ATTTIBUTE function to return the value for the 1st attribute for the user 'FRANK'.

```
DECLARE
   VAL VARCHAR2 (4000);
BEGIN
   VAL := APEX_UTIL.GET_ATTRIBUTE (
      p_username => 'FRANK',
       p_attribute_number => 1);
END;
```

See Also: "SET_ATTRIBUTE Procedure" on page 1-91

GET_AUTHENTICATION_RESULT Function

Use this function to retrieve the authentication result of the current session. Any authenticated user can call this function in a page request context.

Syntax

APEX_UTIL.GET_AUTHENTICATION_RESULT RETURN NUMBER;

Parameters

None.

Example

The following example demonstrates how to use the post-authentication process of an application's authentication scheme to retrieve the authentication result code set during authentication.

APEX_UTIL.SET_SESSION_STATE('MY_AUTH_STATUS','Authentication result:'||APEX_UTIL.GET_AUTHENTICATION_RESULT);

See Also: "SET_AUTHENTICATION_RESULT Procedure" on page 1-92 and "SET_CUSTOM_AUTH_STATUS Procedure" on page 1-93

GET_BLOB_FILE_SRC Function

As an alternative to using the built-in methods of providing a download link, you can use the APEX_UTIL.GET_BLOB_FILE_SRC function. One advantage of this approach, is the ability to more specifically format the display of the image (with height and width tags). Please note that this approach is only valid if called from a valid Oracle Application Express session. Also, this method requires that the parameters that describe the BLOB to be listed as the format of a valid item within the application. That item is then referenced by the function.

See Also: "About BLOB Support in Forms and Reports" in *Oracle* Application Express Application Builder User's Guide

Syntax 1 4 1

```
APEX_UTIL.GET_BLOB_FILE_SRC (
   IN VARCHAR2 DEFAULT NULL, IN VARCHAR2 DEFAULT NULL,
   p_v1
   p_v2
   p_content_disposition IN VARCHAR2 DEFAULT NULL)
RETURN VARCHAR2;
```

Parameters

Table 1–31 describes the parameters available in GET_BLOB_FILE_SRC function.

Table 1–31 GET_BLOB_FILE_SRC Parameters

Parameter	Description
p_item_name	Name of valid application page ITEM that with type FILE that contains the source type of DB column.
p_v1	Value of primary key column 1.
p_v2	Value of primary key column 2.
p_content_disposition	Specify inline or attachment, all other values ignored

Example

As a PLSQL Function Body:

```
RETURN '<img src="'||APEX_UTIL.GET_BLOB_FILE_SRC('P2_ATTACHMENT',:P2_EMPNO)||'"
/>';
As a Region Source of type SQL:
SELECT ID, NAME, CASE WHEN NVL(dbms_lob.getlength(document),0) = 0
   THEN NULL
   ELSE CASE WHEN attach_mimetype like 'image%'
   THEN '<img src="'||apex_util.get_blob_file_src('P4_DOCUMENT',id)||'" />'
    '<a href="'||apex_util.get_blob_file_src('P4_DOCUMENT',id)||'">Download</a>'
   end
   END new_img
   FROM TEST_WITH_BLOB
```

The previous example illustrates how to display the BLOB within the report, if it can be displayed, and provide a download link, if it cannot be displayed.

See Also: "Running a Demonstration Application" in *Oracle Application Express Application Builder User's Guide.*

GET_CURRENT_USER_ID Function

This function returns the numeric user ID of the current user.

Syntax

```
APEX_UTIL.GET_CURRENT_USER_ID
RETURN NUMBER;
```

Parameters

None.

Example

This following example shows how to use the GET_CURRENT_USER_ID function. It returns the numeric user ID of the current user into a local variable.

```
DECLARE
   VAL NUMBER;
BEGIN
   VAL := APEX_UTIL.GET_CURRENT_USER_ID;
END;
```

GET_DEFAULT_SCHEMA Function

This function returns the default schema name associated with the current user.

Syntax

```
APEX_UTIL.GET_DEFAULT_SCHEMA RETURN VARCHAR2;
```

Parameters

None.

Example

The following example shows how to use the GET_DEFAULT_SCHEMA function. It returns the default schema name associated with the current user into a local variable.

```
DECLARE
     VAL VARCHAR2(30);
BEGIN
     VAL := APEX_UTIL.GET_DEFAULT_SCHEMA;
END;
```

GET_EMAIL Function

This function returns the email address associated with the named user.

Syntax

```
APEX_UTIL.GET_EMAIL(
  p_username IN VARCHAR2);
RETURN VARCHAR2;
```

Parameters

Table 1–32 describes the parameters available in GET_EMAIL function.

Table 1–32 GET_EMAIL Parameters

Parameter	Description
p_username	The user name in the account

Example

The following example shows how to use the GET_EMAIL function to return the email address of the user 'FRANK'.

```
DECLARE
   VAL VARCHAR2(240);
BEGIN
   VAL := APEX_UTIL.GET_EMAIL(p_username => 'FRANK');
END;
```

See Also: "SET_EMAIL Procedure" on page 1-94

GET_FILE Procedure

This procedure downloads files from the Oracle Application Express file repository. Please note if you are invoking this procedure during page processing, you must ensure that no page branch will be invoked under the same condition, as it will interfere with the file retrieval. This means that branches with any of the following conditions should not be set to fire:

- Branches with a 'When Button Pressed' attribute equal to the button that invokes the procedure.
- Branches with conditional logic defined that would succeed during page processing when the procedure is being invoked.
- As unconditional.

Syntax

Parameters

Table 1–33 describes the parameters available in GET_FILE procedure.

Table 1–33 GET_FILE Parameters

```
Parameter
                 Description
p_file_id
                 ID in APEX_APPLICATION_FILES of the file to be downloaded. APEX_
                 APPLICATION_FILES is a view on all files uploaded to your workspace.
                 The following example demonstrates how to use APEX_APPLICATION_
                 FILES:
                 DECLARE
                     1_file_id NUMBER;
                 BEGIN
                     SELECT id
                         INTO l_file_id
                         FROM APEX_APPLICATION_FILES
                         WHERE filename = 'myxml';
                         APEX_UTIL.GET_FILE(
                             p_file_id => l_file_id,
                             p_inline => 'YES');
                 END;
p_inline
                 Valid values include YES and NO. YES to display inline in a browser. NO to
                 download as attachment
```

Example

The following example shows how to use the GET_FILE function to return the file identified by the ID 8675309. This will be displayed inline in the browser.

```
BEGIN
   APEX_UTIL.GET_FILE(
       p_file_id => '8675309',
       p_inline => 'YES');
```

END;

See Also: "GET_FILE_ID Function" on page 1-55

GET_FILE_ID Function

This function obtains the primary key of a file in the Oracle Application Express file repository.

Syntax

```
APEX_UTIL.GET_FILE_ID (
  p_name IN VARCHAR2)
RETURN NUMBER;
```

Parameters

Table 1–34 describes the parameters available in GET_FILE_ID function.

Table 1–34 GET_FILE_ID Parameters

Parameter	Description
p_name	The NAME in APEX_APPLICATION_FILES of the file to be downloaded. APEX_APPLICATION_FILES is a view on all files uploaded to your workspace.

Example

The following example shows how to use the GET_FILE_ID function to retrieve the database ID of the file with a filename of 'F125.sql'.

```
DECLARE
    1_name VARCHAR2(255);
   1_file_id NUMBER;
BEGIN
    SELECT name
       INTO l_name
        FROM APEX_APPLICATION_FILES
       WHERE filename = 'F125.sql';
       l_file_id := APEX_UTIL.GET_FILE_ID(p_name => l_name);
END;
```

GET_FIRST_NAME Function

This function returns the FIRST_NAME field stored in the named user account record.

Syntax

```
APEX_UTIL.GET_FIRST_NAME
   p_username IN VARCHAR2)
RETURN VARCHAR2;
```

Parameters

Table 1–35 describes the parameters available in ${\tt GET_FIRST_NAME}$ function.

Table 1–35 GET_FIRST_NAME Parameters

Parameter	Description
p_username	Identifies the user name in the account

Example

The following example shows how to use the GET_FIRST_NAME function to return the FIRST_NAME of the user 'FRANK'.

```
DECLARE
   VAL VARCHAR2(255);
BEGIN
   VAL := APEX_UTIL.GET_FIRST_NAME(p_username => 'FRANK');
END;
```

See Also: "SET_FIRST_NAME Procedure" on page 1-95

GET_GROUPS_USER_BELONGS_TO Function

This function returns a comma then a space separated list of group names to which the named user is a member.

Syntax

```
APEX_UTIL.GET_GROUPS_USER_BELONGS_TO(
    p_username IN VARCHAR2)
RETURN VARCHAR2;
```

Parameters

Table 1–36 describes the parameters available in GET_GROUPS_USER_BELONGS_TO function.

Table 1–36 GET_GROUPS_USER_BELONGS_TO Parameters

Parameter	Description
p_username	Identifies the user name in the account

Example

The following example shows how to use the GET_GROUPS_USER_BELONGS_TO to return the list of groups to which the user 'FRANK' is a member.

```
DECLARE
    VAL VARCHAR2(32765);
BEGIN
    VAL := APEX_UTIL.GET_GROUPS_USER_BELONGS_TO(p_username => 'FRANK');
END;
```

See Also: "EDIT_USER Procedure" on page 1-26

GET_GROUP_ID Function

This function returns the numeric ID of a named group in the workspace.

Syntax

```
APEX_UTIL.GET_GROUP_ID(
   p_group_name IN VARCHAR2)
RETURN VARCHAR2;
```

Parameters

Table 1–37 describes the parameters available in GET_GROUP_ID function.

Table 1–37 GET_GROUP_ID Parameters

Parameter	Description
p_group_name	Identifies the user name in the account

Example

The following example shows how to use the GET_GROUP_ID function to return the ID for the group named 'Managers'.

```
DECLARE
   VAL NUMBER;
BEGIN
   VAL := APEX_UTIL.GET_GROUP_ID(p_group_name => 'Managers');
END;
```

GET_GROUP_NAME Function

This function returns the name of a group identified by a numeric ID.

Syntax

```
APEX_UTIL.GET_GROUP_NAME(
   p_group_id IN NUMBER)
RETURN VARCHAR2;
```

Parameters

Table 1–38 describes the parameters available in GET_GROUP_NAME function.

GET_GROUP_NAME Parameters

Parameter	Description
p_group_id	Identifies a numeric ID of a group in the workspace

Example

The following example shows how to use the GET_GROUP_NAME function to return the name of the group with the ID 8922003.

```
DECLARE
   VAL VARCHAR2(255);
BEGIN
    VAL := APEX_UTIL.GET_GROUP_NAME(p_group_id => 8922003);
END;
```

GET_LAST_NAME Function

This function returns the LAST_NAME field stored in the named user account record.

Syntax

```
APEX_UTIL.GET_LAST_NAME(
   p_username IN VARCHAR2)
RETURN VARCHAR2;
```

Parameters

Table 1–39 describes the parameters available in ${\tt GET_LAST_NAME}$ function.

Table 1–39 GET_LAST_NAME Parameters

Parameter	Description
p_username	The user name in the user account record

Example

The following example shows how to use the function to return the ${\tt LAST_NAME}$ for the user 'FRANK'.

```
DECLARE
   VAL VARCHAR2(255);
BEGIN
   VAL := APEX_UTIL.GET_LAST_NAME(p_username => 'FRANK');
END;
```

See Also: "SET_LAST_NAME Procedure" on page 1-96

GET_NUMERIC_SESSION_STATE Function

This function returns a numeric value for a numeric item. You can use this function in Oracle Application Express applications wherever you can use PL/SQL or SQL. You can also use the shorthand, function NV, in place of APEX_UTIL.GET_NUMERIC_ SESSION_STATE.

Syntax

Parameters

Table 1–40 describes the parameters available in GET_NUMERIC_SESSION_STATE function.

Table 1-40 GET_NUMERIC_SESSION_STATE Parameters

Parameter	Description
p_item	The case insensitive name of the item for which you want to have the session state fetched

Example

The following example shows how to use the function to return the numeric value stored in session state for the item 'my_item'.

See Also: "GET_SESSION_STATE Function" on page 1-68 and "SET_SESSION_STATE Procedure" on page 1-102

GET_PREFERENCE Function

This function retrieves the value of a previously saved preference for a given user.

Syntax

```
APEX_UTIL.GET_PREFERENCE (
  p_preference IN VARCHAR2 DEFAULT NULL,
  RETURN VARCHAR2;
```

Parameters

Table 1–41 describes the parameters available in the GET_PREFERENCE function.

Table 1-41 GET_PREFERENCE Parameters

Parameter	Description
p_preference	Name of the preference to retrieve the value
p_value	Value of the preference
p_user	User for whom the preference is being retrieved

Example

The following example shows how to use the GET_PREFERENCE function to return the value for the currently authenticated user's preference named 'default_view'.

```
DECLARE
   l_default_view VARCHAR2(255);
BEGIN
   l_default_view := APEX_UTIL.GET_PREFERENCE(
       p_preference => 'default_view',
       p_user => :APP_USER);
END;
```

See Also: "SET_PREFERENCE Procedure" on page 1-97, "REMOVE_ PREFERENCE Procedure" on page 1-84 and "Managing User Preferences" in *Oracle Application Express Administration Guide*.

This function returns a document as BLOB using XML based report data and RTF or XSL-FO based report layout.

Syntax

```
APEX_UTIL.GET_PRINT_DOCUMENT (
     p_report_data IN BLOB, p_report_layout IN CLOB,
     p_report_layout_type IN VARCHAR2 default 'xsl-fo',
p_document_format IN VARCHAR2 default 'pdf',
p_print_server IN VARCHAR2 default NULL)
RETURN BLOB;
```

Parameters

Table 1–42 describes the parameters available in the GET_PRINT_DOCUMENT function.

Table 1–42 GET_PRINT_DOCUMENT Parameters

Parameter	Description
p_report_data	XML based report data
p_report_layout	Report layout in XSL-FO or RTF format
p_report_layout_type	Defines the report layout type, that is "xsl-fo" or "rtf"
p_document_format	Defines the document format, that is "pdf", "rtf", "xls", "htm", or "xml"
p_print_server	URL of the print server. If not specified, the print server will be derived from preferences.

For a GET_PRINT_DOCUMENT example see "GET_PRINT_DOCUMENT Function Signature 4".

This function returns a document as BLOB using pre-defined report query and pre-defined report layout.

Syntax

```
APEX_UTIL.GET_PRINT_DOCUMENT (
  p_application_id IN NUMBER,
  p_report_layout_name IN VARCHAR2 default null,
  p_report_layout_type IN VARCHAR2 default 'xsl-fo',
  RETURN BLOB;
```

Parameters

Table 1-43 describes the parameters available in the GET_PRINT_DOCUMENT function.

Table 1–43 GET_PRINT_DOCUMENT Parameters

Parameter	Description
p_application_id	Defines the application ID of the report query
p_report_query_name	Name of the report query (stored under application's shared components)
p_report_layout_name	Name of the report layout (stored under application's Shared Components)
p_report_layout_type	Defines the report layout type, that is "xsl-fo" or "rtf"
p_document_format	Defines the document format, that is "pdf", "rtf", "xls", "htm", or "xml"
p_print_server	URL of the print server. If not specified, the print server will be derived from preferences.

For a GET_PRINT_DOCUMENT example see "GET_PRINT_DOCUMENT Function Signature 4".

This function returns a document as BLOB using a pre-defined report query and RTF or XSL-FO based report layout.

Syntax

```
APEX_UTIL.GET_PRINT_DOCUMENT (
    p_application_id IN NUMBER,
    p_report_query_name IN VARCHAR2, p_report_layout IN CLOB,
    p_report_layout_type IN VARCHAR2 default 'xsl-fo',
    p_document_format IN VARCHAR2 default 'pdf',
p_print_server IN VARCHAR2 default null)
RETURN BLOB;
```

Parameters

Table 1-44 describes the parameters available in the GET_PRINT_DOCUMENT function.

Table 1-44 GET_PRINT_DOCUMENT Parameters

Parameter	Description
p_application_id	Defines the application ID of the report query
p_report_query_name	Name of the report query (stored under application's shared components)
p_report_layout	Defines the report layout in XSL-FO or RTF format
p_report_layout_type	Defines the report layout type, that is "xsl-fo" or "rtf"
p_document_format	Defines the document format, that is "pdf", "rtf", "xls", "htm", or "xml"
p_print_server	URL of the print server. If not specified, the print server will be derived from preferences.

For a GET_PRINT_DOCUMENT example see "GET_PRINT_DOCUMENT Function Signature 4".

This function returns a document as BLOB using XML based report data and RTF or XSL-FO based report layout.

Syntax

```
APEX_UTIL.GET_PRINT_DOCUMENT (
  p_report_data IN CLOB, p_report_layout IN CLOB,
   p_report_layout_type IN VARCHAR2 default 'xsl-fo',
  RETURN BLOB;
```

Parameters

Table 1–45 describes the parameters available in the GET_PRINT_DOCUMENT function. for Signature 4

Table 1-45 GET_PRINT_DOCUMENT Parameters

Parameter	Description
p_report_data	XML based report data, must be encoded in UTF-8
p_report_layout	Report layout in XSL-FO or RTF format
p_report_layout_type	Defines the report layout type, that is "xsl-fo" or "rtf"
p_document_format	Defines the document format, that is "pdf", "rtf", "xls", "htm", or "xml"
p_print_server	URL of the print server. If not specified, the print server will be derived from preferences

Example for Signature 4

The following example shows how to use the GET_PRINT_DOCUMENT using Signature 4 (Document returns as a BLOB using XML based report data and RTF or XSL-FO based report layout). In this example, GET_PRINT_DOCUMENT is used in conjunction with APEX_MAIL.SEND and APEX_MAIL.ADD_ATTACHMENT to send an email with an attachment of the file returned by GET_PRINT_DOCUMENT. Both the report data and layout are taken from values stored in page items (P1_XML and P1_XSL).

```
DECLARE
   1_id number;
   1_document BLOB;
BEGIN
   1_document := APEX_UTIL.GET_PRINT_DOCUMENT (
       p_report_layout_type => 'xsl-fo',
       p_document_format => 'pdf');
  1_id := APEX_MAIL.SEND(
      p_to => :P35_MAIL_TO,
                => 'noreplies@oracle.com',
      p_from
      p_subj => 'sending PDF via print API',
p_body => 'Please review the attachment.',
      p_body_html => 'Please review the attachment');
```

```
APEX_MAIL.ADD_ATTACHMENT (
    p_mail_id => l_id,
    p_attachment => l_document,
    p_filename => 'mydocument.pdf',
    p_mime_type => 'application/pdf');
END;
```

GET_SESSION_STATE Function

This function returns the value for an item. You can use this function in your Oracle Application Express applications wherever you can use PL/SQL or SQL. You can also use the shorthand, function V, in place of APEX_UTIL.GET_SESSION_STATE.

Syntax 1 4 1

```
APEX_UTIL.GET_SESSION_STATE (
   p_item IN VARCHAR2)
RETURN VARCHAR2;
```

Parameters

Table 1–46 describes the parameters available in GET_SESSION_STATE function.

Table 1–46 GET_SESSION_STATE Parameters

Parameter	Description
p_item	The case insensitive name of the item for which you want to have the session state fetched

Example

The following example shows how to use the GET_SESSION_STATE function to return the value stored in session state for the item 'my_item'.

```
DECLARE
   1_item_value VARCHAR2(255);
BEGIN
   l_item_value := APEX_UTIL.GET_SESSION_STATE('my_item');
END;
```

See Also: "GET_NUMERIC_SESSION_STATE Function" on page 1-61 and "SET_SESSION_STATE Procedure" on page 1-102

GET_USER_ID Function

This function returns the numeric ID of a named user in the workspace.

Syntax

```
APEX_UTIL.GET_USER_ID(
   p_username IN VARCHAR2)
RETURN NUMBER;
```

Parameters

Table 1–47 describes the parameters available in GET_USER_ID function.

Table 1-47 GET_USER_ID Parameters

Parameter	Description
p_username	Identifies the name of a user in the workspace

Example

The following example shows how to use the GET_USER_ID function to return the ID for the user named 'FRANK'.

```
DECLARE
   VAL NUMBER;
BEGIN
   VAL := APEX_UTIL.GET_USER_ID(p_username => 'FRANK');
END;
```

GET_USER_ROLES Function

This function returns the DEVELOPER_ROLE field stored in the named user account record. Please note that currently this parameter is named inconsistently between the CREATE_USER, EDIT_USER and FETCH_USER APIs, although they all relate to the DEVELOPER_ROLE field. CREATE_USER uses p_developer_privs, EDIT_USER uses p_developer_roles and FETCH_USER uses p_developer_role.

Syntax

```
APEX_UTIL.GET_USER_ROLES(
  p_username IN VARCHAR2)
RETURN VARCHAR2;
```

Parameters

Table 1–48 describes the parameters available in GET_USER_ROLES function.

Table 1-48 GET_USER_ROLES Parameters

Parameter	Description
p_username	Identifies a user name in the account

Example

The following example shows how to use the GET_USER_ROLES function to return colon separated list of roles stored in the DEVELOPER_ROLE field for the user 'FRANK'.

```
DECLARE
    VAL VARCHAR2 (4000);
BEGIN
    VAL := APEX_UTIL.GET_USER_ROLES(p_username=>'FRANK');
END;
```

GET_USERNAME Function

This function returns the user name of a user account identified by a numeric ID.

Syntax

```
APEX_UTIL.GET_USERNAME(
    p_userid IN NUMBER)
RETURN VARCHAR2;
```

Parameters

Table 1–49 describes the parameters available in GET_USERNAME function.

Table 1-49 GET_USERNAME Parameters

Parameter	Description
p_userid	Identifies the numeric ID of a user account in the workspace

Example

The following example shows how to use the GET_USERNAME function to return the user name for the user with an ID of 228922003.

```
DECLARE
     VAL VARCHAR2(100);
BEGIN
     VAL := APEX_UTIL.GET_USERNAME(p_userid => 228922003);
END;
```

See Also: "SET_USERNAME Procedure" on page 1-103

IS_LOGIN_PASSWORD_VALID Function

This function returns a Boolean result based on the validity of the password for a named user account in the current workspace. This function returns true if the password matches and it returns false if the password does not match.

Syntax 1 4 1

```
APEX_UTIL.IS_LOGIN_PASSWORD_VALID(
   p_username IN VARCHAR2,
   p_password IN VARCHAR2)
RETURN BOOLEAN:
```

Parameters

Table 1–50 describes the parameters available in the IS_LOGIN_PASSWORD_VALID function.

Table 1–50 IS_LOGIN_PASSWORD_VALID Parameters

Parameter	Description
p_username	User name in account
p_password	Password to be compared with password stored in the account

Example

The following example shows how to use the IS_LOGIN_PASSWORD_VALID function to check if the user 'FRANK' has the password 'tiger'. TRUE will be returned if this is a valid password for 'FRANK', FALSE if not.

```
DECLARE
   VAL BOOLEAN;
BEGIN
   VAL := APEX_UTIL.IS_LOGIN_PASSWORD_VALID (
      p_username=>'FRANK',
       p_password=>'tiger');
END;
```

IS_USERNAME_UNIQUE Function

This function returns a Boolean result based on whether the named user account is unique in the workspace.

Syntax

```
APEX_UTIL.IS_USERNAME_UNIQUE(
    p_username IN VARCHAR2)
RETURN BOOLEAN;
```

Parameters

Table 1–51 describes the parameters available in IS_USERNAME_UNIQUE function.

Table 1–51 IS_USERNAME_UNIQUE Parameters

Parameter	Description
p_username	Identifies the user name to be tested

Example

The following example shows how to use the <code>IS_USERNAME_UNIQUE</code> function. If the user 'FRANK' already exists in the current workspace, <code>FALSE</code> will be returned, otherwise <code>TRUE</code> is returned.

KEYVAL_NUM Function

This function gets the value of the package variable (wwv_flow_utilities.g_val_ num) set by APEX_UTIL.SAVEKEY_NUM.

Syntax

```
APEX_UTIL.KEYVAL_NUM
RETURN NUMBER;
```

Parameters

None

Example

The following example shows how to use the KEYVAL_NUM function to return the current value of the package variable wwv_flow_utilities.g_val_num.

```
DECLARE
   VAL NUMBER;
BEGIN
   VAL := APEX_UTIL.KEYVAL_NUM;
END;
```

See Also: "SAVEKEY_NUM Function" on page 1-89

KEYVAL_VC2 Function

This function gets the value of the package variable (wwv_flow_utilities.g_val_vc2) set by APEX_UTIL.SAVEKEY_VC2.

Syntax

```
APEX_UTIL.KEYVAL_VC2;
```

Parameters

None.

Example

The following example shows how to use the KEYVAL_VC2 function to return the current value of the package variable wwv_flow_utilities.g_val_vc2.

```
DECLARE
     VAL VARCHAR2(4000);
BEGIN
     VAL := APEX_UTIL.KEYVAL_VC2;
END;
```

See Also: "SAVEKEY_VC2 Function" on page 1-90

LOCK_ACCOUNT Procedure

Sets a user account status to locked. Must be run by an authenticated workspace administrator in the context of a page request.

Syntax

```
APEX_UTIL.LOCK_ACCOUNT (
    p_user_name IN VARCHAR2);
```

Parameters

Table 1–52 describes the parameters available in the LOCK_ACCOUNT procedure.

Table 1-52 LOCK_ACCOUNT Parameters

Parameter	Description
p_user_name	The user name of the user account

Example

The following example shows how to use the LOCK_ACCOUNT procedure. Use this procedure to lock an Application Express account (workspace administrator, developer, or end user) in the current workspace. This action locks the account for use by administrators, developers, and end users.

```
BEGIN
   FOR c1 IN (SELECT user_name from wwv_flow_users) LOOP
       APEX_UTIL.LOCK_ACCOUNT(p_user_name => c1.user_name);
       htp.p('End User Account:'||c1.user_name||' is now locked.');
    END LOOP;
END;
```

See Also: "UNLOCK_ACCOUNT Procedure" on page 1-113 and "GET_ACCOUNT_LOCKED_STATUS Function" on page 1-45

PASSWORD_FIRST_USE_OCCURRED Function

Returns true if the account's password has changed since the account was created, an Oracle Application Express administrator performs a password reset operation that results in a new password being emailed to the account holder, or a user has initiated password reset operation. This function returns false if the account's password has not been changed since either of the events just described.

This function may be run in a page request context by any authenticated user.

Syntax

```
APEX_UTIL.PASSWORD_FIRST_USE_OCCURRED (
    p_user_name IN VARCHAR2)
RETURN BOOLEAN;
```

Parameters

Table 1–53 describes the parameters available in the PASSWORD_FIRST_USE_OCCURRED procedure.

Table 1–53 PASSWORD_FIRST_USE_OCCURRED Parameters

Parameter	Description
p_user_name	The user name of the user account

Example

The following example shows how to use the PASSWORD_FIRST_USE_OCCURRED function. Use this function to check if the password for an Application Express user account (workspace administrator, developer, or end user) in the current workspace has been changed by the user the first time the user logged in after the password was initially set during account creation, or was changed by one of the password reset operations described above.

This is meaningful only with accounts for which the CHANGE_PASSWORD_ON_FIRST_ USE attribute is set to **Yes**.

```
See Also: "CHANGE_PASSWORD_ON_FIRST_USE Function" on page 1-10
```

PREPARE_URL Function

The PREPARE_URL function serves two purposes:

- To return an f?p URL with the Session State Protection checksum argument (&cs=) if one is required.
- To return an f?p URL with the session ID component replaced with zero (0) if the zero session ID feature is in use and other criteria are met.

Note: The PREPARE_URL functions returns the f?p URL with &cs=<large hex value> appended. If you use this returned value, for example in JavaScript, it may be necessary to escape the ampersand in the URL in order to conform with syntax rules of the particular context. One place you may encounter this is in SVG chart SQL queries which might include PREPARE_URL calls.

Syntax 1 4 1

```
APEX_UTIL.PREPARE_URL (
  p_url IN VARCHAR2,
  p_checksum_type IN VARCHAR2 default null)
RETURN VARCHAR2;
```

Parameters

Table 1–54 describes the parameters available in the PREPARE_URL function.

Table 1-54 PREPARE_URL Parameters

Parameter	Description
p_url	An f?p relative URL with all substitutions resolved
p_url_charset	The character set name (for example, UTF-8) to use when escaping special characters contained within argument values
p_checksum type	Null or any of the following six values, SESSION or 3, PRIVATE_BOOKMARK or 2, or PUBLIC_BOOKMARK or 1

Example 1

The following example shows how to use the PREPARE_URL function to return a URL with a valid 'SESSION' level checksum argument. This URL sets the value of P1_ITEM page item to xyz.

```
DECLARE
    1_url varchar2(2000);
    l app number := v('APP ID');
   l_session number := v('APP_SESSION');
BEGIN
   1_url := APEX_UTIL.PREPARE_URL(
        p_url => 'f?p=' || l_app || ':1:'||l_session||'::NO::P1_ITEM:xyz',
        p_checksum_type => 'SESSION');
END;
```

Example 2

The following example shows how to use the PREPARE_URL function to return a URL with a zero session ID. In a PL/SQL Dynamic Content region that generates f?p URLs (anchors), call PREPARE_URL to ensure that the session ID will set to zero when the zero session ID feature is in use, when the user is a public user (not authenticated), and when the target page is a public page in the current application:

```
 \label{local_prepare_url} $$ $$ htp.p(APEX_UTIL.PREPARE_URL(p_url => 'f?p=' || :APP_ID || ':10:'|| :APP_SESSION || '::NO::P10_ITEM:ABC'); $$
```

When using PREPARE_URL for this purpose, the p_url_charset and p_checksum_type arguments can be omitted. However, it is permissible to use them when both the Session State Protection and Zero Session ID features are applicable.

See Also: "Facilitating Bookmarks by Using Zero as the Session ID" and "Understanding Session State Protection" in *Oracle Application Express Advanced Tutorials*

PUBLIC_CHECK_AUTHORIZATION Function

Given the name of a security scheme, this function determines if the current user passes the security check.

Syntax

```
APEX_UTIL.PUBLIC_CHECK_AUTHORIZATION (
   p_security_scheme IN VARCHAR2)
RETURN BOOLEAN;
```

Parameters

Table 1–55 describes the parameters available in PUBLIC_CHECK_AUTHORIZATION function.

Table 1–55 PUBLIC_CHECK_AUTHORIZATION Parameters

Parameter	Description
p_security_name	The name of the security scheme that determines if the user passes the security check

Example

The following example shows how to use the PUBLIC_CHECK_AUTHORIZATION function to check if the current user passes the check defined in the my_auth_scheme authorization scheme.

```
DECLARE
   l_check_security BOOLEAN;
   1_check_security := APEX_UTIL.PUBLIC_CHECK_AUTHORIZATION('my_auth_scheme');
END:
```

PURGE_REGIONS_BY_APP Procedure

Deletes all cached regions for an application.

Syntax

```
APEX_UTIL.PURGE_REGIONS_BY_APP (
    p_application IN NUMBER);
```

Parameters

Table 1–56 describes the parameters available in PURGE_REGIONS_BY_APP.

Table 1–56 PURGE_REGIONS_BY_APP Parameters

Parameter	Description
p_application	The identification number (ID) of the application.

Example

The following example show how to use APEX_UTIL.PURGE_REGIONS_BY_APP to delete all cached regions for application #123.

```
BEGIN
    APEX_UTILITIES.PURGE_REGIONS_BY_APP(p_application=>123);
END;
```

PURGE_REGIONS_BY_NAME Procedure

Deletes all cached values for a region identified by the application ID, page number and region name.

Syntax

```
APEX_UTIL.PURGE_REGIONS_BY_NAME (
    p_application IN NUMBER,
    p_page IN NUMBER,
    p_region_name IN VARCHAR2);
```

Parameters

Table 1–57 describes the parameters available in PURGE_REGIONS_BY_NAME.

Table 1–57 PURGE_REGIONS_BY_NAME Parameters

Parameter	Description
p_application	The identification number (ID) of the application.
p_page	The number of the page containing the region to be deleted.
p_region_name	The region name to be deleted.

Example

The following example shows how to use the PURGE_REGIONS_BY_NAME procedure to delete all the cached values for the region 'my_cached_region' on page 1 of the current application.

```
BEGIN
    APEX_UTIL.PURGE_REGIONS_BY_NAME(
       p_application => :APP_ID,
       p_page => 1,
       p_region_name => 'my_cached_region');
END:
```

PURGE_REGIONS_BY_PAGE Procedure

Deletes all cached regions by application and page.

Syntax

```
APEX_UTIL.PURGE_REGIONS_BY_PAGE (
    p_application IN NUMBER,
    p_page IN NUMBER);
```

Parameters

Table 1–58 describes the parameters available in PURGE_REGIONS_BY_PAGE.

Table 1–58 PURGE_REGIONS_BY_PAGE Parameters

Parameter	Description
p_application	The identification number (ID) of the application.
p_page	The identification number of page containing the region.

Example

The following example shows how to use the PURGE_REGIONS_BY_PAGE procedure to delete all the cached values for regions on page 1 of the current application.

```
APEX_UTIL.PURGE_REGIONS_BY_PAGE(
       p_application => :APP_ID,
       p_page => 1);
END;
```

REMOVE_PREFERENCE Procedure

This procedure removes the preference for the supplied user.

Syntax

```
APEX_UTIL.REMOVE_PREFERENCE(
 p_preference IN VARCHAR2 DEFAULT NULL,
```

Parameters

Table 1–59 describes the parameters available in the REMOVE_PREFERENCE procedure.

Table 1–59 REMOVE_PREFERENCE Parameters

Parameter	Description
p_preference	Name of the preference to remove
p_user	User for whom the preference is defined

Example

The following example shows how to use the REMOVE_PREFERENCE procedure to remove the preference default_view for the currently authenticated user.

```
APEX_UTIL.REMOVE_PREFERENCE(
      p_preference => 'default_view',
      p_user => :APP_USER);
END:
```

See Also: "GET_PREFERENCE Function" on page 1-62, "SET_ PREFERENCE Procedure" on page 1-97 and "Managing Session State and User Preferences" in Oracle Application Express Administration Guide.

REMOVE_SORT_PREFERENCES Procedure

This procedure removes the user's column heading sorting preference value.

Syntax

```
APEX_UTIL.REMOVE_SORT_PREFERENCES (
    p_user IN VARCHAR2 DEFAULT V('USER'));
```

Parameters

Table 1–60 describes the parameters available in REMOVE_SORT_PREFERENCES function.

Table 1–60 REMOVE_SORT_PREFERENCES Parameters

Parameter	Description
p_user	Identifies the user for whom sorting preferences will be removed

Example

The following example shows how to use the REMOVE_SORT_PREFERENCES procedure to remove the currently authenticated user's column heading sorting preferences.

```
BEGIN
    APEX_UTIL.REMOVE_SORT_PREFERENCES(:APP_USER);
END;
```

REMOVE_USER Procedure

This procedure removes the user account identified by the primary key or a user name. To execute this procedure, the current user must have administrative privilege in the workspace.

Syntax

```
APEX_UTIL.REMOVE_USER(
   p_user_id IN NUMBER,
    p_user_name IN VARCHAR2);
```

Parameters

Table 1–61 describes the parameters available in the REMOVE_USER procedure.

Table 1-61 REMOVE_USER Parameters

Parameter	Description
p_user_id	The numeric primary key of the user account record
p_user_name	The user name of the user account

Example

The following examples show how to use the REMOVE_USER procedure to remove a user account. Firstly, by the primary key (using the p_user_id parameter) and secondly by user name (using the p_user_name parameter).

```
BEGIN
    APEX_UTIL.REMOVE_USER(p_user_id=> 99997);
END;
BEGIN
   APEX_UTIL.REMOVE_USER(p_user_name => 'FRANK');
END;
```

RESET_AUTHORIZATIONS Procedure

To increase performance, Oracle Application Express caches the results of authorization schemes after they have been evaluated. You can use this procedure to undo caching, requiring each authorization scheme be revalidated when it is next encountered during page show or accept processing. You can use this procedure if you want users to have the ability to change their responsibilities (their authorization profile) within your application.

Syntax

APEX_UTIL.RESET_AUTHORIZATIONS;

Parameters

None.

Example

The following example shows how to use the RESET_AUTHORIZATIONS procedure to clear the authorization scheme cache.

```
BEGIN

APEX_UTIL.RESET_AUTHORIZATIONS;
END;
```

RESET_PW Procedure

This procedure resets the password for a named user and emails it in a message to the email address located for the named account in the current workspace. To execute this procedure, the current user must have administrative privilege in the workspace.

Syntax

```
APEX_UTIL.RESET_PW(
   p_user IN VARCHAR2,
    p_msg IN VARCHAR2);
```

Parameters

Table 1–62 describes the parameters available in the RESET_PW procedure.

Table 1-62 RESET_PW Parameters

Parameter	Description
p_user	The user name of the user account
p_msg	Message text to be mailed to a user

Example

The following example shows how to use the RESET_PW procedure to reset the password for the user 'FRANK'.

```
BEGIN
   APEX_UTIL.RESET_PW(
       p_user => 'FRANK',
       p_msg => 'Contact help desk at 555-1212 with questions');
END;
```

See Also: "CHANGE_CURRENT_USER_PW Procedure" on page 1-9

SAVEKEY_NUM Function

This function sets a package variable (wwv_flow_utilities.g_val_num) so that it can be retrieved using the function KEYVAL_NUM.

Syntax

```
APEX_UTIL.SAVEKEY_NUM(
   p_val IN NUMBER)
RETURN NUMBER;
```

Parameters

Table 1–63 describes the parameters available in the SAVEKEY_NUM procedure.

Table 1–63 SAVEKEY_NUM Parameters

Parameter	Description
p_val	The numeric value to be saved

Example

The following example shows how to use the SAVEKEY_NUM function to set the wwv_ flow_utilities.g_val_num package variable to the value of 10.

```
DECLARE
   VAL NUMBER;
BEGIN
   VAL := APEX_UTIL.SAVEKEY_NUM(p_val => 10);
END;
```

See Also: "KEYVAL_NUM Function" on page 1-74

SAVEKEY_VC2 Function

This function sets a package variable (wwv_flow_utilities.g_val_vc2) so that it can be retrieved using the function KEYVAL_VC2.

Syntax

```
APEX_UTIL.SAVEKEY_VC2(
   p_val IN VARCHAR2)
RETURN VARCHAR2;
```

Parameters

Table 1–64 describes the parameters available in the SAVEKEY_VC2 function.

Table 1–64 SAVEKEY_VC2 Parameters

Parameter	Description
p_val	The is the VARCHAR2 value to be saved

Example

The following example shows how to use the SAVEKEY_VC2 function to set the wwv_ flow_utilities.g_val_vc2 package variable to the value of 'XXX'.

```
DECLARE
   VAL VARCHAR2(4000);
BEGIN
   VAL := APEX_UTIL.SAVEKEY_VC2(p_val => 'XXX');
END;
```

See Also: "KEYVAL_VC2 Function" on page 1-75

SET_ATTRIBUTE Procedure

This procedure sets the value of one of the attribute values (1 through 10) of a user in the Application Express accounts table.

Syntax

```
APEX_UTIL.SET_ATTRIBUTE(

p_userid IN NUMBER,

p_attribute_number IN NUMBER,

p_attribute_value IN VARCHAR2);
```

Parameters

Table 1–65 describes the parameters available in the SET_ATTRIBUTE procedure.

Table 1-65 SET_ATTRIBUTE Parameters

Parameter	Description
p_userid	The numeric ID of the user account
p_attribute_number	Attribute number in the user record (1 through 10)
p_attribute_value	Value of the attribute located by p_attribute_number to be set in the user record

Example

The following example shows how to use the SET_ATTRIBUTE procedure to set the number 1 attribute for user 'FRANK' with the value 'foo'.

```
DECLARE
    VAL VARCHAR2(4000);
BEGIN
    APEX_UTIL.SET_ATTRIBUTE (
        p_userid => apex_util.get_user_id(p_username => 'FRANK'),
        p_attribute_number => 1,
        p_attribute_value => 'foo');
END;
```

See Also: "GET_ATTRIBUTE Function" on page 1-46

SET_AUTHENTICATION_RESULT Procedure

This procedure can be called from an application's custom authentication function (that is, credentials verification function). The status passed to this procedure is logged in the Login Access Log.

See Also: "Monitoring Activity within a Workspace" in *Oracle* Application Express Administration Guide

Syntax

```
APEX_UTIL.SET_AUTHENTICATION_RESULT(
    p_code IN NUMBER);
```

Parameters

Table 1–21 describes the parameters available in the SET_AUTHENTICATION_RESULT procedure.

Table 1-66 SET_AUTHENTICATION_RESULT Parameters

Parameter	Description
p_code	Any numeric value the developer chooses. After this value is set in the session using this procedure, it can be retrieved using the APEX_UTIL.GET_AUTHENTICATION_RESULT function.

Example

One way to use this procedure is to include it in the application authentication scheme. This example demonstrates how text and numeric status values can be registered for logging. In this example, no credentials verification is performed, it just demonstrates how text and numeric status values can be registered for logging.

Note that the status set using this procedure is visible in the apex_user_access_ log view and in the reports on this view available to workspace and site administrators.

```
CREATE OR REPLACE FUNCTION MY_AUTH(
   p_username IN VARCHAR2,
   p_password IN VARCHAR2)
RETURN BOOLEAN
IS
BEGIN
    APEX_UTIL.SET_CUSTOM_AUTH_STATUS(p_status=>'User:'||p_username||' is back.');
    IF UPPER(p_username) = 'GOOD' THEN
       APEX_UTIL.SET_AUTHENTICATION_RESULT(24567);
        RETURN TRUE;
        APEX_UTIL.SET_AUTHENTICATION_RESULT(-666);
        RETURN FALSE;
    END IF:
END;
```

See Also: "GET_AUTHENTICATION_RESULT Function" on page 1-47 and "SET_CUSTOM_AUTH_STATUS Procedure" on page 1-93

SET_CUSTOM_AUTH_STATUS Procedure

This procedure can be called from an application's custom authentication function (that is, credentials verification function). The status passed to this procedure is logged in the Login Access Log.

See Also: "Monitoring Activity within a Workspace" in *Oracle Application Express Administration Guide*

Syntax

```
APEX_UTIL.SET_CUSTOM_AUTH_STATUS(
    p_status IN VARCHAR2);
```

Parameters

Table 1–67 describes the parameters available in the SET_CUSTOM_AUTH_STATUS procedure.

Table 1-67 SET_CUSTOM_AUTH_STATUS Parameters

Parameter	Description
p_status	Any text the developer chooses to denote the result of the authentication attempt (up to 4000 characters).

Example

One way to use the SET_CUSTOM_AUTH_STATUS procedure is to include it in the application authentication scheme. This example demonstrates how text and numeric status values can be registered for logging. Note that no credentials verification is performed.

The status set using this procedure is visible in the apex_user_access_log view and in the reports on this view available to workspace and site administrators.

```
CREATE OR REPLACE FUNCTION MY_AUTH(
    p_username IN VARCHAR2,
    p_password IN VARCHAR2)

RETURN BOOLEAN
IS
BEGIN
    APEX_UTIL.SET_CUSTOM_AUTH_STATUS(p_status=>'User:'||p_username||' is back.');
    IF UPPER(p_username) = 'GOOD' THEN
                APEX_UTIL.SET_AUTHENTICATION_RESULT(24567);
                RETURN TRUE;
    ELSE
                APEX_UTIL.SET_AUTHENTICATION_RESULT(-666);
                 RETURN FALSE;
    END IF;
END;
```

See Also: "SET_AUTHENTICATION_RESULT Procedure" on page 1-92 and "GET_AUTHENTICATION_RESULT Function" on page 1-47

SET_EMAIL Procedure

This procedure updates a user account with a new email address. To execute this procedure, the current user must have administrative privileges in the workspace.

Syntax

```
APEX_UTIL.SET_EMAIL(
   p_userid IN NUMBER,
    p_email IN VARCHAR2);
```

Parameters

Table 1–68 describes the parameters available in the SET_EMAIL procedure.

Table 1–68 SET_EMAIL Parameters

Parameter	Description
p_userid	The numeric ID of the user account
p_email	The email address to be saved in user account

Example

The following example shows how to use the SET_EMAIL procedure to set the value of EMAIL to 'frank.scott@somewhere.com' for the user 'FRANK'.

```
BEGIN
    APEX_UTIL.SET_EMAIL(
       p_userid => APEX_UTIL.GET_USER_ID('FRANK'),
       p_email => 'frank.scott@somewhere.com');
END;
```

See Also: "GET_EMAIL Function" on page 1-52 and "GET_USER_ID Function" on page 1-69

SET_FIRST_NAME Procedure

This procedure updates a user account with a new FIRST_NAME value. To execute this procedure, the current user must have administrative privileges in the workspace.

Syntax

Parameters

Table 1–69 describes the parameters available in the SET_FIRST_NAME procedure.

Table 1–69 SET_FIRST_NAME Parameters

Parameter	Description	
p_userid	The numeric ID of the user account	
p_first_name	FIRST_NAME value to be saved in user account	

Example

The following example shows how to use the SET_FIRST_NAME procedure to set the value of FIRST_NAME to 'FRANK' for the user 'FRANK'.

```
BEGIN
   APEX_UTIL.SET_FIRST_NAME(
        p_userid => APEX_UTIL.GET_USER_ID('FRANK'),
        p_first_name => 'FRANK');
END;
```

See Also: "GET_FIRST_NAME Function" on page 1-56and "GET_USER_ID Function" on page 1-69

SET_LAST_NAME Procedure

This procedure updates a user account with a new LAST_NAME value. To execute this procedure, the current user must have administrative privileges in the workspace.

Syntax

```
APEX_UTIL.SET_LAST_NAME(
  p_userid IN NUMBER,
```

Parameters

Table 1–70 describes the parameters available in the SET_LAST_NAME procedure.

Table 1–70 SET_LAST_NAME Parameters

Parameter	Description	
p_userid	The numeric ID of the user account	
p_last_name	LAST_NAME value to be saved in the user account	

Example

The following example shows how to use the SET_LAST_NAME procedure to set the value of LAST_NAME to 'SMITH' for the user 'FRANK'.

```
BEGIN
   APEX_UTIL.SET_LAST_NAME(
      p_userid => APEX_UTIL.GET_USER_ID('FRANK'),
      p_last_name => 'SMITH');
END;
```

See Also: "GET_LAST_NAME Function" on page 1-60 and "GET_ USER_ID Function" on page 1-69

SET_PREFERENCE Procedure

This procedure sets a preference that will persist beyond the user's current session.

Syntax

```
APEX_UTIL.SET_PREFERENCE (

p_preference IN VARCHAR2 DEFAULT NULL,

p_value IN VARCHAR2 DEFAULT NULL,

p_user IN VARCHAR2 DEFAULT NULL);
```

Parameters

Table 1–71 describes the parameters available in the SET_PREFERENCE procedure.

Table 1–71 SET_PREFERENCE Parameters

Parameter	Description
p_preference	Name of the preference (case-sensitive)
p_value	Value of the preference
p_user	User for whom the preference is being set

Example

The following example shows how to use the SET_PREFERENCE procedure to set a preference called 'default_view' to the value 'WEEKLY' that will persist beyond session for the currently authenticated user.

See Also: "GET_PREFERENCE Function" on page 1-62 and "REMOVE_PREFERENCE Procedure" on page 1-84

SET_SESSION_LIFETIME_SECONDS Procedure

This procedure sets the current application's Maximum Session Length in Seconds value for the current session, overriding the corresponding application attribute. This allows developers to dynamically shorten or lengthen the session life based on criteria determined after the user authenticates.

Note: In order for this procedure to have any effect, the application's Maximum Session Length in Seconds attribute must have been set to a non-zero value in the application definition. This procedure will have no effect if that attribute was not set by the developer.

Syntax

```
APEX_UTIL.SET_SESSION_LIFETIME_SECONDS (
   p_seconds IN NUMEBER,
   p_scope IN VARCHAR2 DEFAULT 'SESSION');
```

Parameters

Table 1–72 describes the parameters available in the SET_SESSION_LIFETIME_ SECONDS procedure.

Table 1–72 SET_SESSION_LIFETIME_SECONDS Parameters

Parameter	Description
p_seconds	A positive integer indicating the number of seconds the session used by this application is allowed to exist.
p_scope	Defaults to 'SESSION' and may also be set to 'APPLICATION'. If 'SESSION', all applications using this session are affected. If 'APPLICATION', only the current application using the current session is affected.

Example 1

The following example shows how to use the SET SESSION LIFETIME SECONDS procedure to set the current application's Maximum Session Length in Seconds attribute to 7200 seconds (two hours). This API call will have no effect if the application's Maximum Session Length in Seconds attribute was not set by the developer to a non-zero value in the application definition.

By allowing the p_scope input parameter to use the default value of 'SESSION', the following example would actually apply to all applications using the current session. This would be the most common use case when multiple Application Express applications use a common authentication scheme and are designed to operate as a suite in a common session.

```
APEX_UTIL.SET_SESSION_LIFETIME_SECONDS(p_seconds => 7200);
END;
```

Example 2

The following example shows how to use the SET_SESSION_LIFETIME_SECONDS procedure to set the current application's Maximum Session Length in Seconds attribute to 3600 seconds (one hour). This API call will have no effect if the application's Maximum Session Length in Seconds attribute was not set by the developer to a non-zero value in the application definition.

By overriding the p_scope input parameter's default value and setting it to 'APPLICATION', the following example would actually apply to only to the current application using the current session even if other applications are using the same session.

```
BEGIN
   APEX_UTIL.SET_SESSION_LIFETIME_SECONDS(p_seconds => 3600,
   p_scope => 'APPLICATION');
END;
```

SET_SESSION_MAX_IDLE_SECONDS Procedure

Sets the current application's Maximum Session Idle Time in Seconds value for the current session, overriding the corresponding application attribute. This allows developers to dynamically shorten or lengthen the maximum idle time allowed between page requests based on criteria determined after the user authenticates.

Note: In order for this procedure to have any effect, the application's Maximum Session Idle Time in Seconds attribute must have been set to a non-zero value in the application definition. This procedure will have no effect if that attribute was not set by the developer.

Syntax

```
APEX_UTIL.SET_SESSION_MAX_IDLE_SECONDS (
   p_seconds IN NUMEBER,
   p_scope IN VARCHAR2 DEFAULT 'SESSION');
```

Parameters

Table 1–73 describes the parameters available in the SET_SESSION_MAX_IDLE_ SECONDS procedure.

Table 1–73 SET_SESSION_MAX_IDLE_SECONDS Parameters

Parameter	Description
p_seconds	A positive integer indicating the number of seconds allowed between page requests.
p_scope	Defaults to 'SESSION' and may also be set to 'APPLICATION'. If 'SESSION', this idle time applies to all applications using this session. If 'APPLICATION', this idle time only applies to the current application using the current session.

Example 1

The following example shows how to use the SET_SESSION_MAX_IDLE_SECONDS procedure to set the current application's Maximum Session Idle Time in Seconds attribute to 1200 seconds (twenty minutes). This API call will have no effect if the application's Maximum Session Idle Time in Seconds attribute was not set by the developer to a non-zero value in the application definition.

By allowing the p_scope input parameter to use the default value of 'SESSION', the following example would actually apply to all applications using the current session. This would be the most common use case when multiple Application Express applications use a common authentication scheme and are designed to operate as a suite in a common session.

```
BEGIN
   APEX_UTIL.SET_SESSION_MAX_IDLE_SECONDS(p_seconds => 1200);
END:
```

Example 2

The following example shows how to use the SET_SESSION_MAX_IDLE_SECONDS procedure to set the current application's Maximum Session Idle Time in Seconds

attribute to 600 seconds (ten minutes). This API call will have no effect if the application's Maximum Session Idle Time in Seconds attribute was not set by the developer to a non-zero value in the application definition.

By overriding the p_scope input parameter's default value and setting it to 'APPLICATION', the following example would actually apply to only to the current application using the current session even if other applications are using the same session.

```
BEGIN
    APEX_UTIL.SET_SESSION_MAX_IDLE_SECONDS(p_seconds => 600,
    p_scope => 'APPLICATION');
END;
```

SET_SESSION_STATE Procedure

This procedure sets session state for a current Oracle Application Express session.

Syntax

```
APEX_UTIL.SET_SESSION_STATE (
   p_name IN VARCHAR2 DEFAULT NULL,
   p_value IN VARCHAR2 DEFAULT NULL);
```

Parameters

Table 1–74 describes the parameters available in the SET_SESSION_STATE procedure.

Table 1–74 SET_SESSION_STATE Parameters

Parameter	Description
p_name	Name of the application-level or page-level item for which you are setting sessions state
p_value	Value of session state to set

Example

The following example shows how to use the SET_SESSION_STATE procedure to set the value of the item $\mbox{'my_item'}$ to $\mbox{'myvalue'}$ in the current session.

```
BEGIN
    APEX_UTIL.SET_SESSION_STATE('my_item','myvalue');
END;
```

See Also: "GET_SESSION_STATE Function" on page 1-68, "GET_ NUMERIC_SESSION_STATE Function" on page 1-61, and "Understanding Session State Management" in Oracle Application Express Application Builder User's Guide

SET_USERNAME Procedure

This procedure updates a user account with a new USER_NAME value. To execute this procedure, the current user must have administrative privileges in the workspace.

Syntax

Parameters

Table 1–75 describes the parameters available in the SET_USERNAME procedure.

Table 1–75 SET_USERNAME Parameters

Parameter	Description	
p_userid	The numeric ID of the user account	
p_username	USER_NAME value to be saved in the user account	

Example

The following example shows how to use the SET_USERNAME procedure to set the value of USERNAME to 'USER-XRAY' for the user 'FRANK'.

```
BEGIN
   APEX_UTIL.SET_USERNAME(
        p_userid => APEX_UTIL.GET_USER_ID('FRANK'),
        P_username => 'USER-XRAY');
END;
```

See Also: "GET_USERNAME Function" on page 1-71 and "GET_USER_ID Function" on page 1-69

STRONG_PASSWORD_CHECK Procedure

This procedure returns Boolean OUT values based on whether or not a proposed password meets the password strength requirements as defined by the Oracle Application Express site administrator.

Syntax 1 4 1

APEX_UTIL.STRONG_PASSWORD_CHECK(p_not_like_workspace_name_err OUT BOOLEAN, p_not_reusable_err OUT BOOLEAN);

Parameters

Table 1–76 describes the parameters available in the STRONG_PASSWORD_CHECK procedure.

STRONG_PASSWORD_CHECK Parameters Table 1-76

Parameter	Description
p_username	Username that identifies the account in the current workspace
p_password	Password to be checked against password strength rules
p_old_password	Current password for the account. Used only to enforce "new password must differ from old" rule
p_workspace_name	Current workspace name, used only to enforce "password must not contain workspace name" rule
p_use_strong_rules	Pass FALSE when calling this API
p_min_length_err	Result returns True or False depending upon whether the password meets minimum length requirement
<pre>p_new_differs_by_err</pre>	Result returns True or False depending upon whether the password meets "new password must differ from old" requirements
p_one_alpha_err	Result returns True or False depending upon whether the password meets requirement to contain at least one alphabetic character
p_one_numeric_err	Result returns True or False depending upon whether the password meets requirements to contain at least one numeric character

Table 1-76 (Cont.) STRONG_PASSWORD_CHECK Parameters

Parameter	Description
p_one_punctuation_err	Result returns True or False depending upon whether the password meets requirements to contain at least one punctuation character
p_one_upper_err	Result returns True or False depending upon whether the password meets requirements to contain at least one upper-case character
p_one_lower_err	Result returns True or False depending upon whether the password meets requirements to contain at least one lower-case character
<pre>p_not_like_username_ err</pre>	Result returns True or False depending upon whether the password meets requirements that it not contain the username
<pre>p_not_like_workspace_ name_err</pre>	Result returns True or False whether upon whether the password meets requirements that it not contain the workspace name
p_not_like_words_err	Result returns True or False whether the password meets requirements that it not contain specified simple words
p_not_reusable_err	Result returns True or False whether the password can be reused based on password history rules

Example

The following example shows how to use the STRONG_PASSWORD_CHECK procedure. It checks the new password 'foo' for the user 'SOMEBODY' meets all the password strength requirements defined by the Oracle Application Express site administrator. If any of the checks fail (the associated OUT parameter returns TRUE), then the example outputs a relevant message. For example, if the Oracle Application Express site administrator has defined that passwords must have at least one numeric character and the password 'foo' was checked, then the p_one_numeric_err OUT parameter would return TRUE and the message 'Password must contain at least one numeric character' would be output.

```
DECLARE
                                             varchar2(30);
     l_username
     1_password
                                             varchar2(30);
    1_old_password varchar2
1_workspace_name varchar2
1_min_length_err boolean;
1_new_differs_by_err boolean;

within the last '||l_password_history_days||' days.');
    END IF;
END;
```

See Also: "About Password Policies" in *Oracle Application Express Administration Guide*

STRONG_PASSWORD_VALIDATION Function

This function returns formatted HTML in a VARCHAR2 result based on whether or not a proposed password meets the password strength requirements as defined by the Oracle Application Express site administrator.

Syntax

```
FUNCTION STRONG_PASSWORD_VALIDATION(
     p_username IN VARCHAR2,
p_password IN VARCHAR2,
P_OLD_PASSWORD IN VARCHAR2 DEFAULT NULL,
P_WORKSPACE_NAME IN VARCHAR2)
RETURN VARCHAR2;
```

Parameters

Table 1–77 describes the parameters available in the STRONG_PASSWORD_ VALIDATION function.

Table 1–77 STRONG_PASSWORD_VALIDATION Parameters

Parameter	Description
p_username	Username that identifies the account in the current workspace
p_password	Password to be checked against password strength rules
p_old_password	Current password for the account. Used only to enforce "new password must differ from old" rule
p_workspace_name	Current workspace name, used only to enforce "password must not contain workspace name" rule

Example

The following example shows how to use the STRONG_PASSWORD_VALIDATION procedure. It checks the new password 'foo' for the user 'SOMEBODY' meets all the password strength requirements defined by the Oracle Application Express site administrator. If any of the checks fail, then the example outputs formatted HTML showing details of where the new password fails to meet requirements.

```
DECLARE
        RECIN
     l_username := 'SOMEBODY';
      1_password := 'foo';
     l_old_password := 'foo';
     1_workspace_name := 'XYX_WS';
      HTP.P(APEX_UTIL.STRONG_PASSWORD_VALIDATION(

        p_username
        => l_username,

        p_password
        => l_password,

        p_old_password
        => l_old_password,

        p_workspace_name
        => l_workspace_name

                                                      => 1_workspace_name));
END:
```

STRING_TO_TABLE Function

Given a string, this function returns a PL/SQL array of type APEX_APPLICATION_GLOBAL.VC_ARR2. This array is a VARCHAR2 (32767) table.

Syntax

Parameters

Table 1–78 describes the parameters available in the STRING_TO_TABLE function.

Table 1–78 STRING_TO_TABLE Parameters

Parameter	Description
p_string	String to be converted into a PL/SQL table of type APEX_APPLICATION_GLOBAL.VC_ARR2
p_separator	String separator. The default is a colon

Example

The following example shows how to use the STRING_TO_TABLE function. The function is passed the string 'One:Two:Three' in the p_string parameter and it returns a PL/SQL array of type APEX_APPLICATION_GLOBAL.VC_ARR2 containing 3 elements, the element at position 1 contains the value 'One', position 2 contains the value 'Two' and position 3 contains the value 'Three'. This is then output using the HTP.P function call.

See Also: "TABLE_TO_STRING Function" on page 1-110

TABLE_TO_STRING Function

Given a a PL/SQL table of type APEX_APPLICATION_GLOBAL.VC_ARR2, this function returns a delimited string separated by the supplied separator, or by the default separator, a colon (:).

Syntax 1 4 1

```
APEX_UTIL.TABLE_TO_STRING (
    p_table IN APEX_APPLICATION_GLOBAL.VC_ARR2,
p_string IN VARCHAR2 DEFAULT ':')
RETURN VARCHAR2:
```

Parameters

Table 1–79 describes the parameters available in the TABLE_TO_STRING function.

Table 1–79 TABLE_TO_STRING Parameters

Parameter	Description
p_string	String separator. Default separator is a colon (:)
p_table	PL/SQL table that is to be converted into a delimited string

Example

The following example shows how to use the TABLE_TO_STRING function. The example first calls STRING_TO_TABLE which is passed the string 'One:Two:Three' in the p_string parameter, and returns a PL/SQL array of type APEX_APPLICATION_ GLOBAL . VC_ARR2 containing 3 elements, the element at position 1 contains the value 'One', position 2 contains the value 'Two' and position 3 contains the value 'Three'. This array is then passed in to the TABLE_TO_STRING function in the p_string parameter, which then returns back the original string 'One:Two:Three'.

```
1_string VARCHAR2(255);
   1_vc_arr2 APEX_APPLICATION_GLOBAL.VC_ARR2;
   1_vc_arr2 := APEX_UTIL.STRING_TO_TABLE('One:Two:Three');
   1_string := APEX_UTIL.TABLE_TO_STRING(1_vc_arr2);
END:
```

See Also: "STRING_TO_TABLE Function" on page 1-109

UNEXPIRE_END_USER_ACCOUNT Procedure

Makes expired end users accounts and the associated passwords usable, enabling a end user to log in to developed applications.

Syntax

```
APEX_UTIL.UNEXPIRE_END_USER_ACCOUNT (
    p_user_name IN VARCHAR2);
```

Parameters

Table 1–80 describes the parameters available in the UNEXPIRE_END_USER_ACCOUNT procedure.

Table 1-80 UNEXPIRE_END_USER_ACCOUNT Parameters

Parameter	Description
p_user_name	The user name of the user account

Example

The following example shows how to use the UNEXPIRE_END_USER_ACCOUNT procedure. Use this procedure to renew (unexpire) an Application Express end user account in the current workspace. This action specifically renews the account for use by end users to authenticate to developed applications and may also renew the account for use by developers or administrators to log in to a workspace.

This procedure must be run by a user having administration privileges in the current workspace.

```
BEGIN
    FOR c1 IN (SELECT user_name from wwv_flow_users) LOOP
        APEX_UTIL.UNEXPIRE_END_USER_ACCOUNT(p_user_name => c1.user_name);
        htp.p('End User Account:'||c1.user_name||' is now valid.');
        END LOOP;
END;
```

See Also: "EXPIRE_END_USER_ACCOUNT Parameters" on page 1-31 and "END_USER_ACCOUNT_DAYS_LEFT Function" on page 1-30

UNEXPIRE_WORKSPACE_ACCOUNT Procedure

Unexpires developer and workspace administrator accounts and the associated passwords, enabling the developer or administrator to log in to a workspace.

Syntax

```
APEX_UTIL.UNEXPIRE_WORKSPACE_ACCOUNT (
    p_user_name IN VARCHAR2);
```

Parameters

Table 1–81 describes the parameters available in the UNEXPIRE_WORKSPACE_ ACCOUNT procedure.

Table 1–81 UNEXPIRE_WORKSPACE_ACCOUNT Parameters

Parameter	Description
p_user_name	The user name of the user account

Example

The following example shows how to use the UNEXPIRE_WORKSPACE_ACCOUNT procedure. Use this procedure to renew (unexpire) an Application Express workspace administrator account in the current workspace. This action specifically renews the account for use by developers or administrators to login to a workspace and may also renew the account with respect to its use by end users to authenticate to developed applications.

This procedure must be run by a user having administration privileges in the current workspace.

```
BEGIN
    FOR c1 IN (select user_name from wwv_flow_users) loop
        APEX UTIL.UNEXPIRE WORKSPACE ACCOUNT(p user name => c1.user name);
        htp.p('Workspace Account:'||c1.user_name||' is now valid.');
    END LOOP;
END:
```

See Also: "EXPIRE WORKSPACE ACCOUNT Procedure" on page 1-32 and "WORKSPACE_ACCOUNT_DAYS_LEFT Function" on page 1-116

UNLOCK_ACCOUNT Procedure

Sets a user account status to unlocked. Must be run by an authenticated workspace administrator in a page request context.

Syntax

```
APEX_UTIL.UNLOCK_ACCOUNT ( p_user_name IN VARCHAR2);
```

Parameters

Table 1–82 describes the parameters available in the UNLOCK_ACCOUNT procedure.

Table 1-82 UNLOCK_ACCOUNT Parameters

Parameter	Description
p_user_name	The user name of the user account

Example

The following example shows how to use the UNLOCK_ACCOUNT procedure. Use this procedure to unlock an Application Express account in the current workspace. This action unlocks the account for use by administrators, developers, and end users.

This procedure must be run by a user who has administration privileges in the current workspace

```
BEGIN
   FOR c1 IN (SELECT user_name from wwv_flow_users) LOOP
        APEX_UTIL.UNLOCK_ACCOUNT(p_user_name => c1.user_name);
        htp.p('End User Account:'||c1.user_name||' is now unlocked.');
        END LOOP;
END;
```

See Also: "LOCK_ACCOUNT Procedure" on page 1-76 and "GET_ACCOUNT_LOCKED_STATUS Function" on page 1-45

URL_ENCODE Function

The following special characters are encoded as follows:

Special	After
Characters	Encoding
8	%25
+	%2B
space	+
	%2E
*	%2A
?	%3F
\	%5C
\ / >	%2F
>	%3E
<	%3C
}	%7B
{	%7D
~	%7E
[%5B
]	%5D
,	%60
;	%3B
?	%3F
@	%40
&	%26
#	%23
	%7C
^	%5E
:	%3A
=	%3D
\$	%24

Syntax

```
APEX_UTIL.URL_ENCODE (
   p_url IN VARCHAR2)
   RETURN VARCHAR2;
```

Parameters

Table 1–83 describes the parameters available in the URL_ENCODE function.

Table 1–83 URL_ENCODE Parameters

Parameter	Description
p_url	The string to be encoded

Example

The following example shows how to use the URL_ENCODE function.

```
DECLARE
   1_url VARCHAR2(255);
   l_url := APEX_UTIL.URL_ENCODE('http://www.myurl.com?id=1&cat=foo');
END;
```

In this example, the following URL:

http://www.myurl.com?id=1&cat=foo

Would be returned as:

 $\verb|http%3A%2F%2Fwww%2Emyurl%2Ecom%3Fid%3D1%26cat%3Dfoo|\\$

WORKSPACE_ACCOUNT_DAYS_LEFT Function

Returns the number of days remaining before the developer or workspace administrator account password expires. This function may be run in a page request context by any authenticated user.

Syntax 1 4 1

```
APEX_UTIL.WORKSPACE_ACCOUNT_DAYS_LEFT (
   p_user_name IN VARCHAR2)
   RETURN NUMBER;
```

Parameters

Table 1–84 describes the parameters available in the WORKSPACE_ACCOUNT_DAYS_ LEFT procedure.

Table 1-84 WORKSPACE_ACCOUNT_DAYS_LEFT Parameters

Parameter	Description
p_user_name	The user name of the user account

Example

The following example shows how to use the WORKSPACE_ACCOUNT_DAYS_LEFT function. It can be used in to find the number of days remaining before an Application Express administrator or developer account in the current workspace expires.

```
DECLARE
    1_days_left NUMBER;
BEGIN
    FOR c1 IN (SELECT user_name from wwv_flow_users) LOOP
       l_days_left := APEX_UTIL.WORKSPACE_ACCOUNT_DAYS_LEFT(p_user_name =>
c1.user_name)
       htp.p('Workspace Account:'||c1.user_name||' will expire in '||l_days_
left||' days.');
   END LOOP;
END;
```

See Also: "EXPIRE_WORKSPACE_ACCOUNT Procedure" on page 1-32 and "UNEXPIRE_WORKSPACE_ACCOUNT Procedure" on page 1-112

APEX_MAIL

You can use the APEX_MAIL package to send an email from an Oracle Application Express application. This package is built on top of the Oracle supplied UTL_SMTP package. Because of this dependence, the UTL_SMTP package must be installed and functioning in order to use APEX_MAIL.

See Also: Oracle Database PL/SQL Packages and Types Reference for more information about the UTL_SMTP package

APEX_MAIL contains three procedures. Use APEX_MAIL.SEND to send an outbound email message from your application. Use APEX_MAIL.PUSH_QUEUE to deliver mail messages stored in APEX_MAIL_QUEUE. Use APEX_MAIL.ADD_ATTACHMENT to send an outbound email message from your application as an attachment.

This section contains the following topics:

- ADD_ATTACHMENT Procedure
- PUSH_QUEUE Procedure
- SEND Procedure

Note: The most efficient approach to sending email is to create a background job (using a DBMS_JOB package) to periodically send all mail messages stored in the active mail queue.

See Also: "Sending Email from an Application" in *Oracle Application Express Application Builder User's Guide*

ADD_ATTACHMENT Procedure

This procedure sends an outbound email message from an application as an attachment. To add multiple attachments to a single email, APEX_MAIL.ADD_ ATTACHMENT can be called repeatedly for a single email message.

Syntax 1 4 1

```
APEX_MAIL.ADD_ATTACHMENT(
     p_mail_id IN NUMBER,
p_attachment IN BLOB,
p_filename IN VARCHAR2,
p_mime_type IN VARCHAR2);
```

Parameters

Table 2–1 describes the parameters available in the ADD_ATTACHMENT procedure.

Table 2-1 ADD_ATTACHMENT Parameters

Parameter	Description
p_mail_id	The numeric ID associated with the email. This is the numeric identifier returned from the call to APEX_MAIL. SEND to compose the email body.
p_attachment	\boldsymbol{A} BLOB variable containing the binary content to be attached to the email message.
p_filename	The filename associated with the email attachment.
p_mime_type	A valid MIME type (or Internet media type) to associate with the email attachment.

Examples

The following example demonstrates how to access files stored in APEX_ APPLICATION_FILES and add them to an outbound email message

```
DECLARE
   1_id NUMBER;
BEGIN
   l_id := APEX_MAIL.SEND(
       p_to => 'fred@flintstone.com',
        p_from => 'barney@rubble.com',
        p_subj => 'APEX_MAIL with attachment',
p_body => 'Please review the attachment.',
        p_body_html => '<b>Please</b> review the attachment');
    FOR c1 IN (SELECT filename, blob_content, mime_type
        FROM APEX_APPLICATION_FILES
        WHERE ID IN (123,456)) LOOP
        APEX MAIL.ADD ATTACHMENT (
            p_mail_id => l_id,
            p_attachment => c1.blob_content,
            p_filename => c1.filename,
            p_mime_type => c1.mime_type);
        END LOOP;
    COMMIT:
END;
```

PUSH_QUEUE Procedure

Oracle Application Express stores unsent email messages in a table named APEX_ MAIL_QUEUE. You can manually deliver mail messages stored in this queue to the specified SMTP gateway by invoking the APEX_MAIL.PUSH_QUEUE procedure.

Oracle Application Express logs successfully submitted message in the table APEX_ MAIL_LOG with the timestamp reflecting your server's local time. Keep in mind, the most efficient approach to sending email is to create a background job (using a DBMS_ JOB package) to periodically send all mail messages stored in the active mail queue.

"Sending an Email from an Application" in *Oracle* Application Express Application Builder User's Guide

Syntax 1 4 1

```
APEX_MAIL.PUSH_QUEUE(
                         IN VARCHAR2 DEFAULT NULL.
   p_smtp_hostname
                      IN NUMBER DEFAULT NULL);
   p_smtp_portno
```

Parameters

Table 2–2 describes the parameters available in the PUSH_QUEUE procedure.

Table 2–2 PUSH_QUEUE Parameters

Parameters	Description
p_smtp_hostname	SMTP gateway host name
p_smtp_portno	SMTP gateway port number

Note that these parameter values are provided for backward compatibility, but their respective values are ignored. The SMTP gateway hostname and SMTP gateway port number are exclusively derived from values entered on the Manage Environment Settings when sending email.

See Also: "Configuring Email Settings" in *Oracle Application Express* Administration Guide

Example

The following example demonstrates the use of the APEX_MAIL.PUSH_QUEUE procedure using a shell script. This example only applies to UNIX/LINUX installations.

```
SQLPLUS / <<EOF
APEX_MAIL.PUSH_QUEUE;
DISCONNECT
EXTT
EOF
```

See Also: "Sending Email from an Application" in *Oracle Application* Express Application Builder User's Guide

SEND Procedure

This procedure sends an outbound email message from an application. Although you can use this procedure to pass in either a VARCHAR2 or a CLOB to p_body and p_ body_html, the data types must be the same. In other words, you cannot pass a CLOB to P_BODY and a VARCHAR2 to p_body_html.

When using APEX_MAIL.SEND, remember the following:

- No single line may exceed 1000 characters. The SMTP/MIME specification dictates that no single line shall exceed 1000 characters. To comply with this restriction, you must add a carriage return or line feed characters to break up your p_body or p_body_html parameters into chunks of 1000 characters or less. Failing to do so will result in erroneous email messages, including partial messages or messages with extraneous exclamation points.
- **Plain text and HTML email content.** Passing a value to p_body, but not p_ body_html results in a plain text message. Passing a value to p_body and p_ body_html yields a multi-part message that includes both plain text and HTML content. The settings and capabilities of the recipient's email client determine what displays. Although most modern email clients can read an HTML formatted email, remember that some users disable this functionality to address security issues.
- **Avoid images.** When referencing images in p_body_html using the tag, remember that the images must be accessible to the recipient's email client in order for them to see the image.

For example, suppose you reference an image on your network called hello.gif as follows:

```
<img src="http://someserver.com/hello.gif" alt="Hello" />]
```

In this example, the image is not attached to the email, but is referenced by the email. For the recipient to see it, they must be able to access the image using a Web browser. If the image is inside a firewall and the recipient is outside of the firewall, the image will not display. For this reason, avoid using images. If you must include images, be sure to include the ALT attribute to provide a textual description in the event the image is not accessible.

Syntax

```
APEX_MAIL.SEND(
                          IN VARCHAR2,
   p_to
   p_from
                          IN VARCHAR2,
                           IN [ VARCHAR2 | CLOB ],
   p_body
   p_body_html
                           IN [ VARCHAR2 | CLOB ] DEFAULT NULL,
   p_subj
                          IN VARCHAR2 DEFAULT NULL,
   p_cc
                          IN VARCHAR2 DEFAULT NULL,
   p_bcc
                          IN VARCHAR2 DEFAULT NULL,
   p_replyto
                          IN VARCHAR2);
```

Parameters

Table 2–3 describes the parameters available in the SEND procedure.

Table 2-3 SEND Parameters

Parameter	Description
p_to	Valid email address to which the email will be sent (required). For multiple email addresses, use a comma-separated list
p_from	Email address from which the email will be sent (required). This email address must be a valid address. Otherwise, the message will not be sent
p_body	Body of the email in plain text, not HTML (required). If a value is passed to p_body_html, then this is the only text the recipient sees. If a value is not passed to p_body_html, then this text only displays for email clients that do not support HTML or have HTML disabled. A carriage return or line feed (CRLF) must be included every 1000 characters.
p_body_html	Body of the email in HTML format. This must be a full HTML document including the html and <body> tags. A single line cannot exceed 1000 characters without a carriage return or line feed (CRLF)</body>
p_subj	Subject of the email
p_cc	Valid email addresses to which the email is copied. For multiple email addresses, use a comma-separated list
p_bcc	Valid email addresses to which the email is blind copied. For multiple email addresses, use a comma-separated list
p_replyto	Address of the Reply-To mail header. You can use this parameter as follows:
	■ If you omit the p_replyto parameter, the Reply-To mail header is set to the value specified in the p_from parameter
	■ If you include the p_replyto parameter, but provide a NULL value, the Reply-To mail header is set to NULL. This results in the suppression of automatic email replies
	■ If you include p_replyto parameter, but provide a non-null value (for example, a valid email address), you will send these messages, but the automatic replies will go to the value specified (for example, the email address)

Examples

The following example demonstrates how to use APEX_MAIL. SEND to send a plain text email message from an application.

```
-- Example One: Plain Text only message
DECLARE
   1_body
               CLOB;
BEGIN
   1_body := 'Thank you for your interest in the APEX_MAIL
package.'||utl_tcp.crlf||utl_tcp.crlf;
   1_body := 1_body ||' Sincerely,'||utl_tcp.crlf;
   1_body := 1_body ||' The APEX Dev Team'||utl_tcp.crlf;
   apex_mail.send(
       p_to => 'some_user@somewhere.com', -- change to your email address
       p_from => 'some_sender@somewhere.com', -- change to a real senders
email address
               => 1_body,
       p_body
                => 'APEX_MAIL Package - Plain Text message');
       p_subj
END;
```

The following example demonstrates how to use APEX_MAIL. SEND to send an HTML email message from an application. Remember, you must include a carriage return or line feed (CRLF) every 1000 characters. The example that follows uses ut1_ tcp.crlf.

```
-- Example Two: Plain Text / HTML message
DECLARE
    1 bodv
              CLOB;
   l_body_html CLOB;
BEGIN
    l_body := 'To view the content of this message, please use an HTML enabled
mail client.'||utl_tcp.crlf;
    1_body_html := '<html>
        <head>
           <style type="text/css">
               body{font-family: Arial, Helvetica, sans-serif;
                   font-size:10pt;
                   margin:30px;
                   background-color:#ffffff;}
                span.sig{font-style:italic;
                   font-weight:bold;
                   color:#811919;}
             </style>
         </head>
         <body>'||utl_tcp.crlf;
    1_body_html := 1_body_html ||'Thank you for your interest in the
<strong>APEX_MAIL</strong> package.'||utl_tcp.crlf;
    1_body_html := 1_body_html ||' Sincerely, <br />'||utl_tcp.crlf;
    l_body_html := l_body_html ||' <span class="sig">The APEX Dev Team</span><br
/>'||utl_tcp.crlf;
    apex_mail.send(
    p_to => 'some_user@somewhere.com', -- change to your email address
    p_from => 'some_sender@somewhere.com', -- change to a real senders email
address
   p body
              => 1_body,
    p_body_html => l_body_html,
   p_subj => 'APEX_MAIL Package - HTML formatted message');
END;
```

APEX_ITEM

You can use the APEX_ITEM package to create form elements dynamically based on a SQL query instead of creating individual items page by page.

This section contains the following topics:

- CHECKBOX Function
- DATE_POPUP Function
- DISPLAY_AND_SAVE Function
- HIDDEN Function
- MD5_CHECKSUM Function
- MD5_HIDDEN Function
- POPUP_FROM_LOV Function
- POPUP_FROM_QUERY Function
- POPUPKEY_FROM_LOV Function
- POPUPKEY_FROM_QUERY Function
- RADIOGROUP Function
- SELECT_LIST Function
- SELECT_LIST_FROM_LOV Function
- SELECT_LIST_FROM_LOV_XL Function
- SELECT_LIST_FROM_QUERY Function
- SELECT_LIST_FROM_QUERY_XL Function
- TEXT Function
- TEXTAREA Function
- TEXT_FROM_LOV Function
- TEXT_FROM_LOV_QUERY Function

CHECKBOX Function

This function creates check boxes.

Syntax

```
APEX_ITEM.CHECKBOX(
       p_idx IN NUMBER,
p_value IN VARCHAR2 DEFAULT NULL,
p_attributes IN VARCHAR2 DEFAULT NULL,
p_checked_values IN VARCHAR2 DEFAULT NULL,
       p_checked_values_delimitor IN VARCHAR2 DEFAULT NULL,
p_item_id IN VARCHAR2 DEFAULT ':',
p_item_label IN VARCHAR2 DEFAULT NULL)
RETURN VARCHAR2;
```

Parameters

Table 3–1 describes the parameters available in the CHECKBOX function.

Table 3-1 CHECKBOX Parameters

Parameter	Description
p_idx	Number that determines which APEX_APPLICATION global variable will be used. Valid range of values is 1 to 50. For example 1 creates F01 and 2 creates F02
p_value	Value of a check box, hidden field, or input form item
p_attributes	Controls HTML tag attributes (such as disabled)
p_checked_values	Values to be checked by default
p_checked_values_delimitor	Delimits the values in the previous parameter, p_checked_values
p_item_id	HTML attribute ID for the <input/> tag
p_item_label	Invisible label created for the item

Examples of Default Check Box Behavior

The following example demonstrates how to create a selected check box for each employee in the emp table.

```
SELECT APEX_ITEM.CHECKBOX(1,empno,'CHECKED') "Select",
   ename, job
FROM emp
ORDER BY 1
```

The following example demonstrates how to have all check boxes for employees display without being selected.

```
SELECT APEX_ITEM.CHECKBOX(1,empno) "Select",
   ename, job
FROM emp
ORDER BY 1
```

The following example demonstrates how to select the check boxes for employees who work in department 10.

```
SELECT APEX_ITEM.CHECKBOX(1,empno,DECODE(deptno,10,'CHECKED',NULL)) "Select",
   ename, job
FROM emp
ORDER BY 1
```

The next example demonstrates how to select the check boxes for employees who work in department 10 or department 20.

```
SELECT APEX_ITEM.CHECKBOX(1,deptno,NULL,'10:20',':') "Select",
   ename, job
FROM emp
ORDER BY 1
```

Creating an On-Submit Process

If you are using check boxes in your application, you might need to create an On Submit process to perform a specific type of action on the selected rows. For example, you could have a Delete button that utilizes the following logic:

```
SELECT APEX_ITEM.CHECKBOX(1,empno) "Select",
   ename, job
FROM emp
ORDER by 1
```

Consider the following sample on-submit process:

```
FOR I in 1..APEX_APPLICATION.G_F01.COUNT LOOP
   DELETE FROM emp WHERE empno = to number(APEX APPLICATION.G_F01(i));
END LOOP;
```

The following example demonstrates how to create unselected checkboxes for each employee in the emp table, with a unique ID. This is useful for referencing records from within JavaScript code:

```
SELECT APEX_ITEM.CHECKBOX(1,empno,NULL,NULL,'f01_#ROWNUM#') "Select",
   ename, job
FROM emp
ORDER BY 1
```

DATE_POPUP Function

Use this function with forms that include date fields. The DATE_POPUP function dynamically generates a date field that has a popup calendar button.

Syntax

```
APEX_ITEM.DATE_POPUP(
       p_idx
p_row
p_value
                                                                   IN NUMBER, IN NUMBER,
      p_value IN VARCHAR2 DEFAULT NULL,
p_date_format IN DATE DEFAULT 'DD-MON-YYYY',
p_size IN NUMBER DEFAULT 20,
p_maxlength IN NUMBER DEFAULT 2000,
p_attributes IN VARCHAR2 DEFAULT NULL,
p_item_id IN VARCHAR2 DEFAULT NULL,
p_item_label IN VARCHAR2 DEFAULT NULL)
RETURN VARCHAR2;
                                                                     IN VARCHAR2 DEFAULT NULL,
```

Parameters

Table 3–2 describes the parameters available in the DATE_POPUP function.

Table 3–2 DATE_POPUP Parameters

Parameter	Description
p_idx	Number that determines which APEX_APPLICATION global variable will be used. Valid range of values is 1 to 50. For example, 1 creates F01 and 2 creates F02
p_row	This parameter is deprecated. Anything specified for this value will be ignored
p_value	Value of a field item
p_date_format	Valid database date format
p_size	Controls HTML tag attributes (such as disabled)
p_maxlength	Determines the maximum number of enterable characters. Becomes the maxlength attribute of the <input/> HTML tag
p_attributes	Extra HTML parameters you want to add
p_item_id	HTML attribute ID for the <input/> tag
p_item_label	Invisible label created for the item

See Also: Oracle Database SQL Language Reference for information about the TO_CHAR or TO_DATE functions

The following example demonstrates how to use APEX_ITEM.DATE_POPUP to create popup calendar buttons for the hiredate column.

```
SELECT
    empno,
    APEX_ITEM.HIDDEN(1,empno) | |
    APEX_ITEM.TEXT(2,ename) ename,
```

```
APEX_ITEM.TEXT(3,job) job,
   mgr,
   APEX_ITEM.DATE_POPUP(4,rownum,hiredate,'dd-mon-yyyy') hd,
   APEX_ITEM.TEXT(5,sal) sal,
   APEX_ITEM.TEXT(6,comm) comm,
   deptno
FROM emp
ORDER BY 1
```

DISPLAY_AND_SAVE Function

Use this function to display an item as text, but save its value to session state.

Syntax

```
APEX_ITEM.DISPLAY_AND_SAVE(
   p_idx IN NUMBER,
p_value IN VARCHAR2 DEFAULT NULL,
p_item_id IN VARCHAR2 DEFAULT NULL,
    p_item_label IN VARCHAR2 DEFAULT NULL)
    RETURN VARCHAR2;
```

Parameters

Table 3–3 describes the parameters available in the DISPLAY_AND_SAVE function.

Table 3–3 DISPLAY_AND_SAVE Parameters

Parameter	Description
p_idx	Number that determines which APEX_APPLICATION global variable will be used. Valid range of values is 1 to 50. For example, 1 creates F01 and 2 creates F02
p_value	Current value
p_item_id	HTML attribute ID for the tag
p_item_label	Invisible label created for the item

Example

The following example demonstrates how to use the APEX_ITEM.DISPLAY_AND_ SAVE function.

```
SELECT APEX_ITEM.DISPLAY_AND_SAVE(10,empno) c FROM emp
```

HIDDEN Function

This function dynamically generates hidden form items.

Syntax

```
APEX_ITEM.HIDDEN(
 p_attributes IN VARCHAR2 DEFAULT NULL,
 p_item_id IN VARCHAR2 DEFAULT NULL,
  ) RETURN VARCHAR2;
```

Parameters

Table 3–4 describes the parameters available in the HIDDEN function.

Table 3-4 HIDDEN Parameters

Parameter	Description
p_idx	Number to identify the item you want to generate. The number will determine which G_FXX global is populated
	See Also: "APEX_APPLICATION" on page 4-1
p_value	Value of the hidden input form item
p_attributes	Extra HTML parameters you want to add
p_item_id	HTML attribute ID for the <input/> tag
p_item_label	Invisible label created for the item

Example

Typically, the primary key of a table is stored as a hidden column and used for subsequent update processing, for example:

```
SELECT
    empno.
    APEX_ITEM.HIDDEN(1,empno) | |
    APEX_ITEM.TEXT(2,ename) ename,
    APEX_ITEM.TEXT(3, job) job,
    APEX_ITEM.DATE_POPUP(4,rownum,hiredate,'dd-mon-yyyy') hiredate,
    APEX_ITEM.TEXT(5, sal) sal,
    APEX_ITEM.TEXT(6,comm) comm,
    deptno
FROM emp
ORDER BY 1
```

The previous query could use the following page process to process the results:

```
FOR i IN 1..APEX_APPLICATION.G_F01.COUNT LOOP
   UPDATE emp
        SET
            ename=APEX_APPLICATION.G_F02(i),
            job=APEX_APPLICATION.G_F03(i),
```

```
hiredate=to_date(APEX_APPLICATION.G_F04(i),'dd-mon-yyyy'),
                    sal=APEX_APPLICATION.G_F05(i),
                    comm=APEX_APPLICATION.G_F06(i)
        WHERE empno=to_number(APEX_APPLICATION.G_F01(i));
    END LOOP;
END;
```

Note that the G_F01 column (which corresponds to the hidden EMPNO) is used as the key to update each row.

MD5_CHECKSUM Function

This function is used for lost update detection. Lost update detection ensures data integrity in applications where data can be accessed concurrently.

This function produces hidden form field(s) with a name attribute equal to 'fcs' and includes 50 inputs. APEX_ITEM.MD5_CHECKSUM also produces an MD5 checksum using the Oracle database DBMS_OBFUSCATION_TOOLKIT:

```
UTL_RAW.CAST_TO_RAW(DBMS_OBFUSCATION_TOOLKIT.MD5())
```

An MD5 checksum provides data integrity through hashing and sequencing to ensure that data is not altered or stolen as it is transmitted over a network.

Syntax

```
APEX_ITEM.MD5_CHECKSUM(
   p_value01 IN VARCHAR2 DEFAULT NULL,
   p_value02 IN VARCHAR2 DEFAULT NULL,
   p_value03 IN VARCHAR2 DEFAULT NULL,
   p_value50 IN VARCHAR2 DEFAULT NULL,
   p_col_sep IN VARCHAR2 DEFAULT '|')
   RETURN VARCHAR2;
```

Parameters

Table 3–5 describes the parameters available in the MD5_CHECKSUM function.

Table 3-5 MD5_CHECKSUM Parameters

Parameter	Description
p_value01	Fifty available inputs. If no parameters are supplied, the default to NULL
p_value50	
p_col_sep	String used to separate p_value inputs. Defaults to the pipe symbol ()

Example

This function generates hidden form elements with the name 'fcs'. The values can subsequently be accessed via the APEX_APPLICATION.G_FCS array.

```
SELECT APEX_ITEM.MD5_CHECKSUM(ename, job, sal) md5_cks,
       ename, job, sal
FROM emp
```

MD5_HIDDEN Function

This function is used for lost update detection. Lost update detection ensures data integrity in applications where data can be accessed concurrently.

This function produces a hidden form field and includes 50 inputs. APEX_ITEM.MD5_ HIDDEN also produces an MD5 checksum using the Oracle database DBMS_ OBFUSCATION_TOOLKIT:

```
UTL_RAW.CAST_TO_RAW(DBMS_OBFUSCATION_TOOLKIT.MD5())
```

An MD5 checksum provides data integrity through hashing and sequencing to ensure that data is not altered or stolen as it is transmitted over a network

Syntax

```
APEX_ITEM.MD5_HIDDEN(
   p_idx IN NUMBER,
   p_value01 IN VARCHAR2 DEFAULT NULL,
   p_value02 IN VARCHAR2 DEFAULT NULL,
   p_value03 IN VARCHAR2 DEFAULT NULL,
   p_value50 IN VARCHAR2 DEFAULT NULL, p_col_sep IN VARCHAR2 DEFAULT '|')
   RETURN VARCHAR2;
```

Parameters

Table 3–6 describes the parameters available in the MD5_HIDDEN function.

Table 3-6 MD5_HIDDEN Parameters

Parameter	Description
p_idx	Indicates the form element to be generated. For example, 1 equals F01 and 2 equals F02. Typically the p_idx parameter is constant for a given column
p_value01	Fifty available inputs. Parameters not supplied default to NULL
p_value50	
p_col_sep	String used to separate p_value inputs. Defaults to the pipe symbol (\mid)

Example

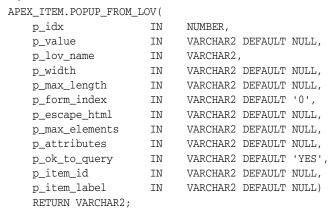

The p_idx parameter specifies the FXX form element to be generated. In the following example, 7 generates F07. Also note that an HTML hidden form element will be generated.

```
SELECT APEX_ITEM.MD5_HIDDEN(7,ename,job,sal)md5_h, ename, job, sal
FROM emp
```

POPUP_FROM_LOV Function

This function generates an HTML popup select list from an application shared list of values (LOV). Like other available functions in the APEX_ITEM package, POPUP_FROM_LOV function is designed to generate forms with F01 to F50 form array elements.

Syntax

Parameters

Table 3–7 describes the some parameters in the POPUP_FROM_LOV function.

Table 3-7 POPUP_FROM_LOV Parameters

Parameter	Description	
p_idx	Form element name. For example, 1 equals F01 and 2 equals F02. Typically, p_idx is a constant for a given column	
p_value	Form element current value. This value should be one of the values in the p_lov_name parameter	
p_lov_name	Named LOV used for this popup	
p_width	Width of the text box	
p_max_length	Maximum number of characters that can be entered in the text box	
p_form_index	HTML form on the page in which an item is contained. Defaults to 0 and rarely used.	
	Only use this parameter when it is necessary to embed a custom form in your page template (such as a search field that posts to a different Web site). If this form comes before the #FORM_OPEN# substitution string, then its index is zero and the form opened automatically by Oracle Application Express must be referenced as form 1. This functionality supports the JavaScript used in the popup LOV that passes a value back to a form element.	

Table 3–7 (Cont.) POPUP_FROM_LOV Parameters

Parameter	Description	
p_escape_html	Replacements for special characters that require an escaped equivalent:	
	■ < for <	
	<pre>> for ></pre>	
	• & for &	
	Range of values is YES and NO. If YES, special characters will be escaped. This parameter is useful if you know your query will return illegal HTML.	
p_max_elements	Limit on the number of rows that can be returned by your query. Limits the performance impact of user searches. By entering a value in this parameter, you force the user to search for a narrower set of results.	
p_attributes	Additional HTML attributes to use for the form item.	
p_ok_to_query	Range of values is YES and NO. If YES, a popup returns first set of rows for the LOV. If NO, a search is initiated to return rows.	
p_item_id	ID attribute of the form element.	
p_item_label	Invisible label created for the item.	

The following example demonstrates a sample query the generates a popup from an LOV named DEPT_LOV.

SELECT APEX_ITEM.POPUP_FROM_LOV (1,deptno,'DEPT_LOV') dt FROM emp

POPUP_FROM_QUERY Function

This function generates an HTML popup select list from a query. Like other available functions in the APEX_ITEM package, the POPUP_FROM_QUERY function is designed to generate forms with F01 to F50 form array elements.

Syntax

APEX_ITEM.POPUP_FROM_QUERY(

p_idx	IN	NUMBER,		
p_value	IN	VARCHAR2	DEFAULT	NULL,
p_lov_query	IN	VARCHAR2	,	
p_width	IN	VARCHAR2	DEFAULT	NULL,
p_max_length	IN	VARCHAR2	DEFAULT	NULL,
p_form_index	IN	VARCHAR2	DEFAULT	'0',
p_escape_html	IN	VARCHAR2	DEFAULT	NULL,
p_max_elements	IN	VARCHAR2	DEFAULT	NULL,
p_attributes	IN	VARCHAR2	DEFAULT	NULL,
p_ok_to_query	IN	VARCHAR2	DEFAULT	'YES',
p_item_id	IN	VARCHAR2	DEFAULT	NULL,
p_item_label	IN	VARCHAR2	DEFAULT	NULL)
RETURN VARCHAR2;				

Parameters

Table 3–8 describes the parameters in the ${\tt POPUP_FROM_QUERY}$ function.

Table 3–8 POPUP_FROM_QUERY Parameters

Parameter	Description	
p_idx	Form element name. For example, 1 equals F01 and 2 equals F02. Typically, p_idx is a constant for a given column.	
p_value	Form element current value. This value should be one of the values in the p_lov_query parameter.	
p_lov_query	SQL query that is expected to select two columns (a display column and a return column). For example:	
	SELECT dname, deptno FROM dept	
p_width	Width of the text box.	
p_max_length	Maximum number of characters that can be entered in the text box.	
p_form_index	HTML form on the page in which an item is contained. Defaults to 0 and rarely used.	
	Only use this parameter when it is necessary to embed a custom form in your page template (such as a search field that posts to a different Web site). If this form comes before the #FORM_OPEN# substitution string, then its index is zero and the form opened automatically by Oracle Application Express must be referenced as form 1. This functionality supports the JavaScript used in the popup LOV that passes a value back to a form element.	

Table 3–8 (Cont.) POPUP_FROM_QUERY Parameters

Parameter	Description	
p_escape_html	Replacements for special characters that require an escaped equivalent.	
	<pre>< for <</pre>	
	■ > for >	
	• & for &	
	Range of values is YES and NO. If YES, special characters will be escaped. This parameter is useful if you know your query will return illegal HTML.	
p_max_elements	Limit on the number of rows that can be returned by your query. Limits the performance impact of user searches. By entering a value in this parameter, you force the user to search for a narrower set of results.	
p_attributes	Additional HTML attributes to use for the form item.	
p_ok_to_query	Range of values is YES and NO. If YES, a popup returns the first set of rows for the LOV. If NO, a search is initiated to return rows.	
p_item_id	ID attribute of the form element.	
p_item_label	Invisible label created for the item.	

The following example demonstrates a sample query the generates a popup select list from the emp table.

SELECT APEX_ITEM.POPUP_FROM_QUERY (1,deptno,'SELECT dname, deptno FROM dept') dt FROM emp

POPUPKEY_FROM_LOV Function

This function generates a popup key select list from a shared list of values (LOV). Similar to other available functions in the APEX_ITEM package, the POPUPKEY_FROM_LOV function is designed to generate forms with F01 to F50 form array elements.

Syntax

```
APEX_ITEM.POPUPKEY_FROM_LOV(

p_idx IN NUMBER,

p_value IN VARCHAR2 DEFAULT NULL,

p_lov_name IN VARCHAR2,

p_width IN VARCHAR2 DEFAULT NULL,

p_max_length IN VARCHAR2 DEFAULT NULL,

p_form_index IN VARCHAR2 DEFAULT NULL,

p_escape_html IN VARCHAR2 DEFAULT NULL,

p_max_elements IN VARCHAR2 DEFAULT NULL,

p_attributes IN VARCHAR2 DEFAULT NULL,

p_ok_to_query IN VARCHAR2 DEFAULT NULL,

p_item_id IN VARCHAR2 DEFAULT NULL,

p_item_label IN VARCHAR2 DEFAULT NULL)

RETURN VARCHAR2;
```

Although the text field associated with the popup displays in the first column in the LOV query, the actual value is specified in the second column in the query.

Parameters

Table 3–9 describes the some parameters in the POPUPKEY_FROM_LOV function.

Table 3-9 POPUPKEY FROM LOV Parameters

Parameter	Description		
p_idx	Identifies a form element name. For example, 1 equals F01 and 2 equals F02. Typically, p_idx is a constant for a given column		
	Because of the behavior of POPUPKEY_FROM_QUERY, the next index value should be p_idx + 1. For example:		
	<pre>SELECT APEX_ITEM.POPUPKEY_FROM_LOV (1,deptno,'DEPT') dt, APEX_ITEM.HIDDEN(3,empno) eno</pre>		
p_value	Indicates the current value. This value should be one of the values in the P_LOV_NAME parameter.		
p_lov_name Identifies a named LOV used for this popup.			
p_width	Width of the text box.		
p_max_length	Maximum number of characters that can be entered in the text box.		
p_form_index	HTML form on the page in which an item is contained. Defaults to 0 and rarely used.		
	Only use this parameter when it is necessary to embed a custom form in your page template (such as a search field that posts to a different Web site). If this form comes before the #FORM_OPEN# substitution string, then its index is zero and the form opened automatically by Oracle Application Express must be referenced as form 1. This functionality supports the JavaScript used in the popup LOV that passes a value back to a form element.		

Table 3–9 (Cont.) POPUPKEY_FROM_LOV Parameters

Parameter	Description	
p_escape_html	Replacements for special characters that require an escaped equivalent.	
	■ < for <	
	<pre>> for ></pre>	
	■ & for &	
	This parameter is useful if you know your query will return illegal HTML.	
p_max_elements	Limit on the number of rows that can be returned by your query. Limits the performance impact of user searches. By entering a value in this parameter, you force the user to search for a narrower set of results.	
p_attributes	Additional HTML attributes to use for the form item.	
p_ok_to_query	Range of values is YES and NO. If YES, a popup returns the first set of rows for the LOV. If NO, a search is initiated to return rows.	
p_item_id	HTML attribute ID for the <input/> tag	
p_item_label	Invisible label created for the item	

The following example demonstrates how to generate a popup key select list from a shared list of values (LOV).

SELECT APEX_ITEM.POPUPKEY_FROM_LOV (1,deptno,'DEPT') dt FROM emp

POPUPKEY_FROM_QUERY Function

This function generates a popup key select list from a SQL query. Similar to other available functions in the APEX_ITEM package, the POPUPKEY_FROM_QUERY function is designed to generate forms with F01 to F50 form array elements.

Syntax

Parameters

Table 3–10 describes the some parameters in the POPUPKEY_FROM_QUERY function.

Table 3-10 POPUPKEY_FROM_QUERY Parameters

Parameter	Description			
p_idx	Form element name. For example, 1 equals F01 and 2 equals F02. Typically, p_idx is a constant for a given column.			
	Because of the behavior of POPUPKEY_FROM_QUERY, the next index value should be p_idx + 1. For example:			
	SELECT APEX_ITEM.POPUPKEY_FROM_QUERY (1,deptno,'SELECT dname, deptno FROM dept') dt, APEX_ITEM.HIDDEN(3,empno) eno			
p_value	Form element current value. This value should be one of the values in the P_LOV_QUERY parameter.			
p_lov_query	LOV query used for this popup.			
p_width	Width of the text box.			
p_max_length	Maximum number of characters that can be entered in the text box.			
p_form_index	HTML form on the page in which an item is contained. Defaults to 0 and rarely used.			
	Only use this parameter when it is necessary to embed a custom form in your page template (such as a search field that posts to a different Web site). If this form comes before the #FORM_OPEN# substitution string, then its index is zero and the form opened automatically by Oracle Application Express must be referenced as form 1. This functionality supports the JavaScript used in the popup LOV that passes a value back to a form element.			

Table 3–10 (Cont.) POPUPKEY_FROM_QUERY Parameters

Parameter	Description	
p_escape_html	Replacements for special characters that require an escaped equivalent.	
	• < for <	
	• > for >	
	<pre>& & amp; for &</pre>	
	This parameter is useful if you know your query will return illegal HTML.	
p_max_elements	Limit on the number of rows that can be returned by your query. Limits the performance impact of user searches. By entering a value in this parameter, you force the user to search for a narrower set of results.	
p_attributes	Additional HTML attributes to use for the form item.	
p_ok_to_query	Range of values is YES and NO. If YES, a popup returns first set of rows for the LOV. If NO, a search is initiated to return rows.	
p_item_id	ID attribute of the form element.	
p_item_label	Invisible label created for the item.	

The following example demonstrates how to generate a popup select list from a SQL query.

SELECT APEX_ITEM.POPUPKEY_FROM_QUERY (1,deptno,'SELECT dname, deptno FROM dept')

FROM emp

RADIOGROUP Function

This function generates a radio group from a SQL query.

Syntax

APEX_ITEM.RADIOGROUP(
p_idx	IN	NUMBER,	
p_value	IN	VARCHAR2 DEFAULT NULL,	
<pre>p_selected_value</pre>	IN	VARCHAR2 DEFAULT NULL,	
p_display	IN	VARCHAR2 DEFAULT NULL,	
p_attributes	IN	VARCHAR2 DEFAULT NULL,	
p_onblur	IN	VARCHAR2 DEFAULT NULL,	
p_onchange	IN	VARCHAR2 DEFAULT NULL,	
p_onfocus	IN	VARCHAR2 DEFAULT NULL,	
p_item_id	IN	VARCHAR2 DEFAULT NULL,	
p_item_label	IN	VARCHAR2 DEFAULT NULL)	
RETURN VARCHAR2;			

Parameters

Table 3–11 describes the parameters available in the RADIOGROUP function.

Table 3–11 RADIOGROUP Parameters

Parameter	Description
p_idx	Number that determines which APEX_APPLICATION global variable will be used. Valid range of values is 1 to 50.For example 1 creates F01 and 2 creates F02.
p_value	Value of the radio group.
p_selected_value	Value that should be selected.
p_display	Text to display next to the radio option.
p_attributes	Extra HTML parameters you want to add.
p_onblur	JavaScript to execute in the onBlur event.
p_onchange	JavaScript to execute in the onChange event.
p_onfocus	JavaScript to execute in the onFocus event.
p_item_id	HTML attribute ID for the <input/> tag
p_item_label	Invisible label created for the item

Example

The following example demonstrates how to select department 20 from the emp table as a default in a radio group.

```
SELECT APEX_ITEM.RADIOGROUP (1,deptno,'20',dname) dt FROM dept ORDER BY 1
```

SELECT_LIST Function

This function dynamically generates a static select list. Similar to other functions available in the APEX_ITEM package, these select list functions are designed to generate forms with F01 to F50 form array elements.

Syntax 1 4 1

```
APEX_ITEM.SELECT_LIST(
 p_list_values IN VARCHAR2 DEFAULT NULL,
 p_attributes IN VARCHAR2 DEFAULT NULL,
 p_show_null IN VARCHAR2 DEFAULT 'NO',
 p_null_value IN VARCHAR2 DEFAULT '%NULL%',
 p_item_id IN VARCHAR2 DEFAULT NULL,
 RETURN VARCHAR2;
```

Parameters

Table 3–12 describes the parameters available in the SELECT_LIST function.

Table 3-12 SELECT_LIST Parameters

Parameter	Description
p_idx	Form element name. For example, 1 equals F01 and 2 equals F02. Typically the P_IDX parameter is constant for a given column.
p_value	Current value. This value should be a value in the P_LIST_VALUES parameter.
p_list_values	List of static values separated by commas. Displays values and returns values that are separated by semicolons.
	Note that this is only available in the SELECT_LIST function.
p_attributes	Extra HTML parameters you want to add.
p_show_null	Extra select option to enable the NULL selection. Range of values is ${\tt YES}$ and ${\tt NO}.$
p_null_value	Value to be returned when a user selects the NULL option. Only relevant when p_show_null equals YES.
p_null_text	Value to be displayed when a user selects the NULL option. Only relevant when p_show_null equals YES.
p_item_id	HTML attribute ID for the <input/> tag.
p_item_label	Invisible lable created for the item.
p_show_extra	Shows the current value even if the value of p_value is not located in the select list.

Example

The following example demonstrates a static select list that displays Yes, returns Y, defaults to Y, and generates a F01 form item.

```
SELECT APEX_ITEM.SELECT_LIST(1,'Y','Yes;Y,No;N')yn
```

```
FROM emp
```

The following example demonstrates the use of APEX_ITEM.SELECT_LIST to generate a static select list where:

- A form array element F03 will be generated (p_idx parameter).
- The initial value for each element will be equal to the value for deptno for the row from emp (p_value parameter).
- The select list will contain 4 options (p_list_values parameter).
- The text within the select list will display in red (p_attributes parameter).
- A null option will be displayed (p_show_null) and this option will display -Select- as the text (p_null_text parameter).
- An HTML ID attribute will be generated for each row, where #ROWNUM# will be substituted for the current row rownum (p_item_id parameter). (So an ID of 'f03_4' will be generated for row 4.)
- A HTML label element will be generated for each row (p_item_label parameter).
- The current value for deptno will be displayed, even if it is not contained with the list of values passed in the p_list_values parameter (p_show_extra parameter).

```
SELECT empno "Employee #",
   ename "Name",
   APEX_ITEM.SELECT_LIST(
     p_idx => 3,
      p_value => deptno,
      p_list_values => 'ACCOUNTING; 10, RESEARCH; 20, SALES; 30, OPERATIONS; 40',
      p_attributes => 'style="color:red;"',
      p_show_null => 'YES',
      p_null_value => NULL,
      p_null_text
                    => '-Select-',
                    => 'f03_#ROWNUM#',
      p_item_id
      p_item_label => 'Label for f03_#ROWNUM#',
      p_show_extra => 'YES') "Department"
 FROM emp;
```

SELECT_LIST_FROM_LOV Function

This function dynamically generates select lists from a shared list of values (LOV). Similar to other functions available in the APEX_ITEM package, these select list functions are designed to generate forms with F01 to F50 form array elements.

Syntax 1 4 1

```
APEX_ITEM.SELECT_LIST_FROM_LOV(
  p_idx IN NUMBER,
 p_attributes IN VARCHAR2 DEFAULT NULL,
  p_show_null IN VARCHAR2 DEFAULT 'YES',
 p_null_value IN VARCHAR2 DEFAULT '%NULL%',
 p_item_id IN VARCHAR2 DEFAULT NULL,
 p_item_label IN VARCHAR2 DEFAULT NULL,
  RETURN VARCHAR2;
```

Parameters

Table 3–13 describes the parameters available in the SELECT_LIST_FROM_LOV function.

Table 3–13 SELECT_LIST_FROM_LOV Parameters

Parameter	Description
p_idx	Form element name. For example, 1 equals F01 and 2 equals F02. Typically, the p_idx parameter is constant for a given column.
p_value	Current value. This value should be a value in the p_lov parameter.
p_lov	Text name of an application list of values. This list of values must be defined in your application. This parameter is used only by the select_list_from_lov function.
p_attributes	Extra HTML parameters you want to add.
p_show_null	Extra select option to enable the NULL selection. Range of values is ${\tt YES}$ and ${\tt NO}.$
p_null_value	Value to be returned when a user selects the NULL option. Only relevant when p_show_null equals YES.
p_null_text	Value to be displayed when a user selects the NULL option. Only relevant when p_show_null equals YES.
p_item_id	HTML attribute ID for the <select> tag.</select>
p_item_label	Invisible label created for the item.
p_show_extra	Shows the current value even if the value of p_value is not located in the select list.

Example

The following example demonstrates a select list based on an LOV defined in the application.

```
SELECT APEX_ITEM.SELECT_LIST_FROM_LOV(2,job,'JOB_FLOW_LOV')job
FROM emp
```

SELECT_LIST_FROM_LOV_XL Function

This function dynamically generates very large select lists (greater than 32K) from a shared list of values (LOV). Similar to other functions available in the APEX_ITEM package, these select list functions are designed to generate forms with F01 to F50 form array elements. This function is the same as SELECT_LIST_FROM_LOV, but its return value is CLOB. This enables you to use it in SQL queries where you need to handle a column value longer than 4000 characters.

Syntax

```
APEX_ITEM.SELECT_LIST_FROM_LOV_XL(

p_idx IN NUMBER,

p_value IN VARCHAR2 DEFAULT NULL,

p_lov IN VARCHAR2,

p_attributes IN VARCHAR2 DEFAULT NULL,

p_show_null IN VARCHAR2 DEFAULT 'YES',

p_null_value IN VARCHAR2 DEFAULT '%NULL%',

p_null_text IN VARCHAR2 DEFAULT '%',

p_item_id IN VARCHAR2 DEFAULT NULL,

p_item_label IN VARCHAR2 DEFAULT NULL,

p_show_extra IN VARCHAR2 DEFAULT NULL,

RETURN CLOB;
```

Parameters

Table 3–14 describes the parameters available in the SELECT_LIST_FROM_LOV_XL function.

Table 3–14 SELECT_LIST_FROM_LOV_XL Parameters

Parameter	Description
p_idx	Form element name. For example, 1 equals F01 and 2 equals F02. Typically, the p_idx parameter is constant for a given column.
p_value	Current value. This value should be a value in the p_lov parameter.
p_lov	Text name of a list of values. This list of values must be defined in your application. This parameter is used only by the select_list_from_lov function.
p_attributes	Extra HTML parameters you want to add.
p_show_null	Extra select option to enable the NULL selection. Range of values is ${\tt YES}$ and ${\tt NO}.$
p_null_value	Value to be returned when a user selects the NULL option. Only relevant when p_show_null equals YES.
p_null_text	Value to be displayed when a user selects the NULL option. Only relevant when p_show_null equals YES.
p_item_id	HTML attribute ID for the <select> tag.</select>
p_item_label	Invisible label created for the item.
p_show_extra	Shows the current value even if the value of p_value is not located in the select list.

The following example demonstrates how to create a select list based on an LOV defined in the application.

SELECT APEX_ITEM.SELECT_LIST_FROM_LOV_XL(2,job,'JOB_FLOW_LOV')job FROM emp

SELECT_LIST_FROM_QUERY Function

This function dynamically generates a select list from a query. Similar to other functions available in the APEX_ITEM package, these select list functions are designed to generate forms with F01 to F50 form array elements.

Syntax

```
APEX_ITEM.SELECT_LIST_FROM_QUERY(

p_idx IN NUMBER,

p_value IN VARCHAR2 DEFAULT NULL,

p_query IN VARCHAR2,

p_attributes IN VARCHAR2 DEFAULT NULL,

p_show_null IN VARCHAR2 DEFAULT 'YES',

p_null_value IN VARCHAR2 DEFAULT '%NULL%',

p_null_text IN VARCHAR2 DEFAULT '%',

p_item_id IN VARCHAR2 DEFAULT NULL,

p_item_label IN VARCHAR2 DEFAULT NULL,

p_show_extra IN VARCHAR2 DEFAULT NULL,

RETURN VARCHAR2;
```

Parameters

Table 3–15 describes the parameters available in the SELECT_LIST_FROM_QUERY function.

Table 3–15 SELECT_LIST_FROM_QUERY Parameters

Parameter	Description	
p_idx	Form element name. For example, 1 equals F01 and 2 equals F02. Typically, the p_idx parameter is constant for a given column.	
p_value	Current value. This value should be a value in the p_query parameter.	
p_query	SQL query that is expected to select two columns, a display column, and a return column. For example:	
	SELECT dname, deptno FROM dept	
	Note that this is used only by the SELECT_LIST_FROM_QUERY function.	
	Also note, if only one column is specified in the select clause of this query, the value for this column will be used for both display and return purposes.	
p_attributes	Extra HTML parameters you want to add.	
p_show_null	Extra select option to enable the NULL selection. Range of values is ${\tt YES}$ and ${\tt NO}.$	
p_null_value	Value to be returned when a user selects the NULL option. Only relevant when p_show_null equals YES.	
p_null_text	Value to be displayed when a user selects the NULL option. Only relevant when p_show_null equals YES.	
p_item_id	HTML attribute ID for the <select> tag.</select>	
p_item_label	Invisible label created for the item.	
p_show_extra	Show the current value even if the value of p_value is not located in the select list.	

The following example demonstrates a select list based on a SQL query.

SELECT APEX_ITEM.SELECT_LIST_FROM_QUERY(3,job,'SELECT DISTINCT job FROM emp')job FROM emp

SELECT_LIST_FROM_QUERY_XL Function

This function is the same as SELECT_LIST_FROM_QUERY, but its return value is a CLOB. This allows its use in SQL queries where you need to handle a column value longer than 4000 characters. Similar to other functions available in the APEX_ITEM package, these select list functions are designed to generate forms with F01 to F50 form array elements.

Syntax

```
APEX_ITEM.SELECT_LIST_FROM_QUERY_XL(
p_idx IN NUMBER,
p_value IN VARCHAR2 DEFAULT NULL,
p_query IN VARCHAR2,
p_attributes IN VARCHAR2 DEFAULT NULL,
p_show_null IN VARCHAR2 DEFAULT 'YES',
p_null_value IN VARCHAR2 DEFAULT '%NULL%',
p_null_text IN VARCHAR2 DEFAULT '%',
p_item_id IN VARCHAR2 DEFAULT NULL,
p_item_label IN VARCHAR2 DEFAULT NULL,
p_show_extra IN VARCHAR2 DEFAULT NULL,
RETURN CLOB;
```

Parameters

Table 3–16 describes the parameters available in the SELECT_LIST_FROM_QUERY_XL function.

Table 3–16 SELECT_LIST_FROM_QUERY_XL Parameters

Parameter	Description
p_idx	Form element name. For example, 1 equals F01 and 2 equals F02. Typically the p_idx parameter is constant for a given column.
p_value	Current value. This value should be a value in the p_query parameter.
p_query	SQL query that is expected to select two columns, a display column, and a return column. For example:
	SELECT dname, deptno FROM dept
	Note that this is used only by the SELECT_LIST_FROM_QUERY_XL function.
	Also note, if only one column is specified in the select clause of this query, the value for this column will be used for both display and return purposes.
p_attributes	Extra HTML parameters you want to add.
p_show_null	Extra select option to enable the NULL selection. Range of values is ${\tt YES}$ and ${\tt NO}.$
p_null_value	Value to be returned when a user selects the NULL option. Only relevant when p_show_null equals YES.
p_null_text	Value to be displayed when a user selects the NULL option. Only relevant when p_show_null equals YES.
p_item_id	HTML attribute ID for the <select> tag.</select>
p_item_label	Invisible label created for the item.

Table 3–16 (Cont.) SELECT_LIST_FROM_QUERY_XL Parameters

Parameter	Description
p_show_extra	Show the current value even if the value of p_value is not located in the select list.

The following example demonstrates a select list based on a SQL query.

SELECT APEX_ITEM.SELECT_LIST_FROM_QUERY_XL(3,job,'SELECT DISTINCT job FROM emp')job FROM emp

TEXT Function

This function generates text fields (or text input form items) from a SQL query.

Syntax

```
APEX_ITEM.TEXT(

p_idx IN NUMBER,

p_value IN VARCHAR2 DEFAULT NULL,

p_size IN NUMBER DEFAULT NULL,

p_maxlength IN NUMBER DEFAULT NULL,

p_attributes IN VARCHAR2 DEFAULT NULL,

p_item_id IN VARCHAR2 DEFAULT NULL,

p_item_label IN VARCHAR2 DEFAULT NULL)

RETURN VARCHAR2;
```

Parameters

Table 3–17 describes the parameters available in the TEXT function.

Table 3-17 TEXT Parameters

Parameter	Description
p_idx	Number to identify the item you want to generate. The number will determine which G_FXX global is populated.
	See Also: "APEX_APPLICATION" on page 4-1
p_value	Value of a text field item.
p_size	Controls HTML tag attributes (such as disabled).
p_maxlength	Maximum number of characters that can be entered in the text box.
p_attributes	Extra HTML parameters you want to add.
p_item_id	HTML attribute ID for the <input/> tag.
p_item_label	Invisible label created for the item.

Example

The following sample query demonstrates how to generate one update field for each row. Note that the ename, sal, and comm columns use the APEX_ITEM.TEXT function to generate an HTML text field for each row. Also, notice that each item in the query is passed a unique p_idx parameter to ensure that each column is stored in its own array.

```
SELECT
empno,
APEX_ITEM.HIDDEN(1,empno) | |
APEX_ITEM.TEXT(2,ename) ename,
APEX_ITEM.TEXT(3,job) job,
mgr,
APEX_ITEM.DATE_POPUP(4,rownum,hiredate,'dd-mon-yyyy') hiredate,
APEX_ITEM.TEXT(5,sal) sal,
APEX_ITEM.TEXT(6,comm) comm,
deptno
FROM emp
ORDER BY 1
```

TEXTAREA Function

This function creates text areas.

Syntax

```
APEX_ITEM.TEXTAREA(
     p_idx IN NUMBER,
p_value IN VARCHAR2 DEFAULT NULL,
p_rows IN NUMBER DEAULT 40,
p_cols IN NUMBER DEFAULT 4,
      p_attributes IN VARCHAR2 DEFAULT NULL,
p_item_id IN VARCHAR2 DEFAULT NULL,
p_item_label IN VARCHAR2 DEFAULT NULL)
       RETURN VARCHAR2;
```

Parameters

Table 3–18 describes the parameters available in the <code>TEXTAREA</code> function.

Table 3-18 TEXTAREA Parameters

Parameter	Description
p_idx	Number to identify the item you want to generate. The number will determine which G_FXX global is populated.
	See Also: "APEX_APPLICATION" on page 4-1
p_value	Value of the text area item.
p_rows	Height of the text area (HTML rows attribute)
p_cols	Width of the text area (HTML column attribute).
p_attributes	Extra HTML parameters you want to add.
p_item_id	HTML attribute ID for the <textarea> tag.</td></tr><tr><td>p_item_label</td><td>Invisible label created for the item.</td></tr></tbody></table></textarea>

Example

The following example demonstrates how to create a text area based on a SQL query.

```
SELECT APEX_ITEM.TEXTAREA(3,ename,5,80) a
FROM emp
```

TEXT_FROM_LOV Function

Use this function to display an item as text, deriving the display value of the named LOV.

Syntax

```
APEX_ITEM.TEXT_FROM_LOV (

p_value IN VARCHAR2 DEFAULT NULL,

p_lov IN VARCHAR2,

p_null_text IN VARCHAR2 DEFAULT '%')

RETURN VARCHAR2;
```

Parameters

Table 3–19 describes the parameters available in the TEXT_FROM_LOV function.

Table 3-19 TEXT_FROM_LOV Parameters

Parameter	Description
p_value	Value of a field item.
	Note that if p_value is not located in the list of values, p_null_text is value displayed.
p_lov	Text name of a shared list of values. This list of values must be defined in your application.
p_null_text	Value displayed when the value of the field item is NULL.

Example

The following example demonstrates how to derive the display value from a named LOV (EMPNO_ENAME_LOV).

```
SELECT APEX_ITEM.TEXT_FROM_LOV(empno,'EMPNO_ENAME_LOV') c FROM emp
```

TEXT_FROM_LOV_QUERY Function

Use this function to display an item as text, deriving the display value from a list of values query.

Syntax

```
APEX_ITEM.TEXT_FROM_LOV_QUERY (
    p_value IN VARCHAR2 DEFAULT NULL,
p_query IN VARCHAR2,
p_null_text IN VARCHAR2 DEFAULT '%')
     RETURN VARCHAR2;
```

Parameters

Table 3–20 describes the parameters available in the TEXT_FROM_LOV_QUERY function.

Table 3–20 TEXT_FROM_LOV_QUERY Parameters

Parameter	Description
p_value	Value of a field item.
p_query	SQL query that is expected to select two columns, a display column and a return column. For example:
	SELECT dname, deptno FROM dept
	Note if only one column is specified in the select clause of this query, the value for this column will be used for both display and return purposes.
p_null_text	Value to be displayed when the value of the field item is NULL or a corresponding entry is not located for the value p_value in the list of values query.

Example

The following example demonstrates how to derive the display value from a query.

```
SELECT APEX_ITEM.TEXT_FROM_LOV_QUERY(empno,'SELECT ename, empno FROM emp') c from
```

APEX_APPLICATION

The APEX_APPLICATION package is a PL/SQL package that implements the Oracle Application Express rendering engine. You can use this package to take advantage of a number of global variables. Table 4–1 describes the global variables available in the APEX_APPLICATION package.

Table 4–1 Global Variables Available in APEX_APPLICATION

Global Variable	Description
G_USER	Specifies the currently logged in user.
G_FLOW_ID	Specifies the ID of the currently running application.
G_FLOW_STEP_ID	Specifies the ID of the currently running page.
G_FLOW_OWNER	Specifies the schema to parse for the currently running application.
G_REQUEST	Specifies the value of the request variable most recently passed to or set within the show or accept modules.
G_BROWSER_LANGUAGE	Refers to the Web browser's current language preference.
G_DEBUG	Refers to whether debugging is currently switched on or off. Valid values for the DEBUG flag are 'Yes' or 'No'. Turning debug on shows details about application processing.
G_HOME_LINK	Refers to the home page of an application. The Application Express engine will redirect to this location if no page is given and if no alternative page is dictated by the authentication scheme's logic.
G_LOGIN_URL	Can be used to display a link to a login page for users that are not currently logged in.
G_IMAGE_PREFIX	Refers to the virtual path the web server uses to point to the images directory distributed with Oracle Application Express.
G_FLOW_SCHEMA_OWNER	Refers to the owner of the Application Express schema.
G_PRINTER_FRIENDLY	Refers to whether or not the Application Express engine is running in print view mode. This setting can be referenced in conditions to eliminate elements not desired in a printed document from a page.
G_PROXY_SERVER	Refers to the application attribute 'Proxy Server'.
G_SYSDATE	Refers to the current date on the database server. this uses the DATE DATATYPE.
G_PUBLIC_USER	Refers to the Oracle schema used to connect to the database through the database access descriptor (DAD).
G_GLOBAL_NOTIFICATION	Specifies the application's global notification attribute.

Topics in this section include:

- Referencing Arrays
- Referencing Values Within an On Submit Process
- Converting an Array to a Single Value
- **HELP Procedure**

Referencing Arrays

Items are typically HTML form elements such as text fields, select lists, and check boxes. When you create a new form item using a wizard, the wizard uses a standard naming format. The naming format provides a handle so you can retrieve the value of the item later on.

If you need to create your own items, you can access them after a page is submitted by referencing APEX_APPLICATION.G_F01 to APEX_APPLICATION.G_F50 arrays. You can create your own HTML form fields by providing the input parameters using the format F01, F02, F03 and so on. You can create up to 50 input parameters ranging from F01 to F50, for example:

```
<INPUT TYPE="text" NAME="F01" SIZE="32" MAXLENGTH="32" VALUE="some value">
<TEXTAREA NAME="F02" ROWS=4 COLS=90 WRAP="VIRTUAL">this is the example of a text
area.</TEXTAREA>
<SELECT NAME="F03" SIZE="1">
<OPTION VALUE="abc">abc
<OPTION VALUE="123">123
</SELECT>
```

Because the F01 to F50 input items are declared as PL/SQL arrays, you can have multiple items named the same value. For example:

```
<INPUT TYPE="text" NAME="F01" SIZE="32" MAXLENGTH="32" VALUE="array element 1">
<INPUT TYPE="text" NAME="F01" SIZE="32" MAXLENGTH="32" VALUE="array element 2">
<INPUT TYPE="text" NAME="F01" SIZE="32" MAXLENGTH="32" VALUE="array element 3">
```

Note that following PL/SQL code produces the same HTML as show in the previous example.

```
FOR i IN 1..3 LOOP
APEX_ITEM.TEXT(P_IDX
                        => 1.
 p_value =>'array element '||i ,
  p_size
            =>32,
 p_maxlength =>32);
END LOOP;
```

Referencing Values Within an On Submit Process

You can reference the values posted by an HTML form using the PL/SQL variable APEX_APPLICATION.G_F01 to APEX_APPLICATION.G_F50. Because this element is an array, you can reference values directly, for example:

```
FOR i IN 1..APEX_APPLICATION.G_F01.COUNT LOOP
    htp.p('element '||I||' has a value of '||APEX_APPLICATION.G_F01(i));
END LOOP;
```

Note that check boxes displayed using APEX_ITEM. CHECKBOX will only contain values in the APEX_APPLICATION arrays for those rows which are checked. Unlike other items (TEXT, TEXTAREA, and DATE_POPUP) which can contain an entry in the corresponding APEX_APPLICATION array for every row submitted, a check box will only have an entry in the APEX_APPLICATION array if it is selected.

Converting an Array to a Single Value

You can also use Oracle Application Express public utility functions to convert an array into a single value. The resulting string value is a colon-separated list of the array element values. For example:

```
htp.p(APEX_UTIL.TABLE_TO_STRING(APEX_APPLICATION.G_F01));
```

This function enables you to reference G_F01 to G_F50 values in an application process that performs actions on data. The following sample process demonstrates how values are inserted into a table:

```
INSERT INTO my_table (my_column) VALUES
APEX_UTIL.TABLE_TO_STRING(APEX_APPLICATION.G_F01)
```

HELP Procedure

This function outputs page and item level help text as formatted HTML and can be used to customize how help information is displayed in your application.

Syntax

```
APEX_APPLICATION.HELP (
p_request IN VARCHAR2 DEFAULT NULL,
p_flow_id IN VARCHAR2 DEFAULT NULL,
 p_flow_step_id IN VARCHAR2 DEFAULT NULL,
 p_show_item_help IN VARCHAR2 DEFAULT 'YES',
```

Parameters

Table 4–2 describes the parameters available in the HELP procedure.

Table 4-2 HELP Parameters

Parameter	Description
p_request	Not used.
p_flow_id	The application ID that contains the page or item level help you want to output.
p_flow_step_id	The page ID that contains the page or item level help you want to display.
p_show_item_help	Flag to determine if item level help is output. If this parameter is supplied, the value must be either 'YES' or 'NO', if not the default value will be 'YES'.
p_show_regions	Flag to determine if region headers are output (for regions containing page items). If this parameter is supplied, the value must be either 'YES' or 'NO', if not the default value will be 'YES'.
p_before_page_html	Use this parameter to include HTML between the page level help text and item level help text.
p_after_page_html	Use this parameter to include HTML at the bottom of the output, after all other help.
p_before_region_html	Use this parameter to include HTML before every region section. Note this parameter is ignored if p_show_regions is set to 'NO'.
p_after_region_html	Use this parameter to include HTML after every region section. Note this parameter is ignored if p_show_regions is set to 'NO'.
p_before_prompt_html	Use this parameter to include HTML before every item label for item level help. Note this parameter is ignored if p_show_item_help is set to 'NO'.

Table 4-2 (Cont.) HELP Parameters

Parameter	Description
p_after_prompt_html	Use this parameter to include HTML after every item label for item level help. Note this parameter is ignored if p_show_item_help is set to 'NO'.
p_before_item_html	Use this parameter to include HTML before every item help text for item level help. Note this parameter is ignored if p_show_item_help is set to 'NO'.
p_after_item_html	Use this parameter to include HTML after every item help text for item level help. Note this parameter is ignored if p_show_item_help is set to 'NO'.

The following example shows how to use the APEX_APPLICATION. HELP procedure to customize how help information is displayed.

In this example, the p_flow_step_id parameter is set to :REQUEST, which means that a page ID specified in the REQUEST section of the URL will be used to control which page's help information to display (see note after example for full details on how this can be achieved).

Also, the help display has been customized so that the region sub-header now has a different color (through the p_before_region_html parameter) and also the ':' has been removed that appeared by default after every item prompt (through the p_ after_prompt_html parameter).

```
APEX APPLICATION.HELP(
   p_flow_id => :APP_ID,
   p_flow_step_id => :REQUEST,
   p_before_region_html => '<br/>
width="100%"><b>',
   p_after_prompt_html => '</b>&nbsp;&nbsp;');
```

In order to implement this type of call in your application, you can do the following:

- Create a page that will be your application help page.
- Create a region of type 'PL/SQL Dynamic Content' and add the APEX_ APPLICATION. HELP call as PL/SQL Source.
- Then you can add a 'Navigation Bar' link to this page, ensuring that the REQUEST value set in the link is &APP_PAGE_ID.

APEX_CUSTOM_AUTH

You can use the APEX_CUSTOM_AUTH package to perform various operations related to authentication and session management.

Topics in this section include:

- APPLICATION_PAGE_ITEM_EXISTS Function
- CURRENT_PAGE_IS_PUBLIC Function
- DEFINE_USER_SESSION Procedure
- GET_COOKIE_PROPS Procedure
- GET_LDAP_PROPS Procedure
- GET_NEXT_SESSION_ID Function
- GET_SECURITY_GROUP_ID Function
- GET_SESSION_ID Function
- GET_SESSION_ID_FROM_COOKIE Function
- **GET_USER** Function
- **GET_USERNAME** Function
- IS_SESSION_VALID Function
- **LOGIN Procedure**
- **LOGOUT Procedure**
- POST_LOGIN Procedure
- SESSION_ID_EXISTS Function
- SET_SESSION_ID Procedure
- SET_SESSION_ID_TO_NEXT_VALUE Procedure
- SET_USER Procedure

APPLICATION_PAGE_ITEM_EXISTS Function

This function checks for the existence of page-level item within the current page of an application. This function requires the parameter p_item_name. This function returns a Boolean value (true or false).

Syntax 1 4 1

```
APEX_CUSTOM_AUTH.APPLICATION_PAGE_ITEM_EXISTS(
   p_item_name IN VARCHAR2)
RETURN BOOLEAN;
```

Parameters

Table 5–1 describes the parameters available in the APPLICATION_PAGE_ITEM_ EXISTS function.

Table 5–1 APPLICATION_PAGE_ITEM_EXISTS Parameters

Parameter	Description
p_item_name	The name of the page-level item.

Example

The following example checks for the existance of a page-level item, ITEM_NAME, within the current page of the application.

```
DECLARE
   L VAL BOOLEAN;
BEGIN
   VAL := APEX_CUSTOM_AUTH.APPLICATION_PAGE_ITEM_EXISTS(:ITEM_NAME);
   IF L_VAL THEN
      htp.p('Item Exists');
       htp.p('Does not Exist');
   END IF;
END;
```

CURRENT_PAGE_IS_PUBLIC Function

This function checks whether the current page's authentication attribute is set to Page **Is Public** and returns a Boolean value (true or false)

See Also: "Editing Page Attributes" in *Oracle Application Express* Application Builder User's Guide.

Syntax

```
APEX_CUSTOM_AUTH.CURRENT_PAGE_IS_PUBLIC
RETURN BOOLEAN;
```

Example

The following example checks whether the current page in an application is public.

```
L_VAL BOOLEAN;
BEGIN
   L_VAL := APEX_CUSTOM_AUTH.CURRENT_PAGE_IS_PUBLIC;
    IF L_VAL THEN
       htp.p('Page is Public');
    ELSE
       htp.p('Page is not Public');
    END IF;
END;
```

DEFINE_USER_SESSION Procedure

This procedure combines the SET_USER and SET_SESSION_ID procedures to create one call.

Syntax

```
APEX_CUSTOM_AUTH.DEFINE_USER_SESSION(
   p_user IN VARCHAR2,
   p_session_id IN NUMBER);
```

Parameters

Table 5–2 describes the parameters available in the DEFINE_USER_SESSION procedure.

Table 5–2 DEFINE_USER_SESSION Parameters

Parameter	Description
p_user	Login name of the user.
p_session_id	The session ID.

Example

In the following example, a new session ID is generated and registered along with the current application user.

```
APEX_CUSTOM_AUTH.DEFINE_USER_SESSION (
    :APP_USER,
    APEX_CUSTOM_AUTH.GET_NEXT_SESSION_ID);
```

See Also: "SET_USER Procedure" on page 5-20 and "SET_SESSION_ ID Procedure" on page 5-18.

GET_COOKIE_PROPS Procedure

This procedure obtains the properties of the session cookie used in the current authentication scheme for the specified application. These properties can be viewed directly in the Application Builder by viewing the authentication scheme cookie attributes.

Syntax

```
APEX_CUSTOM_AUTH.GET_COOKIE_PROPS(
   p_app_id IN NUMBER,
    p_cookie_name OUT VARCHAR2,
p_cookie_path OUT VARCHAR2,
p_cookie_domain OUT VARCHAR2
p secure OUT BOOLEAN):
    p_secure
                                        OUT BOOLEAN);
```

Parameters

Table 5–3 describes the parameters available in the GET_COOKIE_PROPS procedure.

Table 5–3 GET_COOKIE_PROPS Parameters

Parameter	Description
p_app_id	An application ID in the current workspace.
p_cookie_name	The cookie name.
p_cookie_path	The cookie path.
p_cookie_domain	The cookie domain.
p_secure	Flag to set secure property of cookie.

Example

The following example retrieves the session cookie values used by the authentication scheme of the current application.

```
DECLARE
   1_cookie_name varchar2(256);
   1_cookie_path varchar2(256);
   1_cookie_domain varchar2(256);
   l_secure boolean;
BEGIN
   APEX_CUSTOM_AUTH.GET_COOKIE_PROPS(
      p_app_id => 2918,
       p _cookie_name => l_cookie_name,
       p _cookie_path => l_cookie_path,
       p _cookie_domain => l_cookie_domain,
       p_secure => 1_secure);
END;
```

GET_LDAP_PROPS Procedure

This procedure obtains the LDAP attributes of the current authentication scheme for the current application. These properties can be viewed directly in Application Builder by viewing the authentication scheme attributes.

Syntax 1 4 1

```
APEX_CUSTOM_AUTH.GET_LDAP_PROPS(
      p_ldap_host OUT VARCHAR2,
p_ldap_port OUT INTEGER,
p_ldap_dn OUT VARCHAR2,
p_ldap_edit_function OUT VARCHAR2);
```

Parameters

Table 5–4 describes the parameters available in the GET_LDAP_PROPS procedure.

Table 5–4 GET_LDAP_PROPS Parameters

Parameter	Description
p_ldap_host	LDAP host name.
p_ldap_port	LDAP port number.
p_ldap_dn	LDAP DN string.
p_ldap_edit_function	LDAP edit function name.

Example

The following example retrieves the LDAP attributes associated with the current application.

```
DECLARE
 1_ldap_edit_function VARCHAR2(256);
APEX_CUSTOM_AUTH.GET_LDAP_PROPS (
 p_ldap_edit_function => l_ldap_edit_function);
END;
```

GET_NEXT_SESSION_ID Function

This function generates the next session ID from the Oracle Application Express sequence generator. This function returns a number.

Syntax

```
APEX_CUSTOM_AUTH.GET_NEXT_SESSION_ID
RETURN NUMBER;
```

Example

The following example generates the next session ID and stores it into a variable.

```
DECLARE
    VAL NUMBER;
BEGIN
   VAL := APEX_CUSTOM_AUTH.GET_NEXT_SESSION_ID;
END;
```

GET_SECURITY_GROUP_ID Function

This function returns a number with the value of the security group ID that identifies the workspace of the current user.

Syntax

```
APEX_CUSTOM_AUTH.GET_SECURITY_GROUP_ID
RETURN NUMBER;
```

Example

The following example retrieves the Security Group ID for the current user.

```
VAL NUMBER;
BEGIN
   VAL := APEX_CUSTOM_AUTH.GET_SECURITY_GROUP_ID;
END;
```

GET_SESSION_ID Function

This function returns APEX_APPLICATION.G_INSTANCE global variable. GET_ SESSION_ID returns a number.

Syntax

```
APEX_CUSTOM_AUTH.GET_SESSION_ID
RETURN NUMBER;
```

Example

The following example retrieves the session ID for the current user.

```
VAL NUMBER;
BEGIN
   VAL := APEX_CUSTOM_AUTH.GET_SESSION_ID;
END;
```

GET_SESSION_ID_FROM_COOKIE Function

This function returns the Oracle Application Express session ID located by the session cookie in the context of a page request in the current browser session.

Syntax

```
APEX_CUSTOM_AUTH.GET_SESSION_ID_FROM_COOKIE
RETURN NUMBER;
```

Example

The following example retrieves the session ID from the current session cookie.

```
DECLARE
   VAL NUMBER;
BEGIN
   VAL := APEX_CUSTOM_AUTH.GET_SESSION_ID_FROM_COOKIE;
END;
```

GET_USER Function

This function returns the APEX_APPLICATION.G_USER global variable (VARCHAR2).

Syntax

```
APEX_CUSTOM_AUTH.GET_USER
RETURN VARCHAR2;
```

Examples

The following example retrieves the username associated with the current session.

```
DECLARE
   VAL VARCHAR2(256);
BEGIN
   VAL := APEX_CUSTOM_AUTH.GET_USER;
END;
```

GET_USERNAME Function

This function returns user name registered with the current Oracle Application Express session in the internal sessions table. This user name is usually the same as the authenticated user running the current page.

Syntax

```
APEX_CUSTOM_AUTH.GET_USERNAME
RETURN VARCHAR2;
```

Example

The following example retrieves the username registered with the current application session.

```
DECLARE
   VAL VARCHAR2(256);
BEGIN
   VAL := APEX_CUSTOM_AUTH.GET_USERNAME;
END;
```

IS_SESSION_VALID Function

This function is a Boolean result obtained from executing the current application's authentication scheme to determine if a valid session exists. This function returns the Boolean result of the authentication scheme's page sentry.

Syntax

```
APEX_CUSTOM_AUTH.IS_SESSION_VALID
RETURN BOOLEAN;
```

Example

The following example verifies whether the current session is valid.

```
DECLARE
    L_VAL BOOLEAN;
BEGIN
   L_VAL := APEX_CUSTOM_AUTH.IS_SESSION_VALID;
    IF L_VAL THEN
       htp.p('Valid');
    ELSE
       htp.p('Invalid');
   END IF;
END;
```

LOGIN Procedure

Also referred to as the "Login API," this procedure performs authentication and session registration.

Syntax

Parameter

Table 5–5 describes the parameters available in the LOGIN procedure.

Table 5–5 LOGIN Parameters

Parameter	Description
p_uname	Login name of the user.
p_password	Clear text user password.
p_session_id	Current Oracle Application Express session ID.
p_app_page	Current application ID. After login page separated by a colon (:).
p_entry_point	Internal use only.
p_preserve_case	If true, do not upper p_uname during session registration

The following example performs the user authentication and session registration.

```
APEX_CUSTOM_AUTH.LOGIN (
      p_uname => 'FRANK',
       p_password => 'secret99',
      p_session_id => V('APP_SESSION'),
      p_app_page => :APP_ID||':1');
END;
```

Note: Do not use bind variable notations for p_session_id argument.

LOGOUT Procedure

This procedure causes a logout from the current session by unsetting the session cookie and redirecting to a new location.

Syntax

Parameter

Table 5–6 describes the parameters available in the LOGOUT procedure.

Table 5-6 LOGOUT Parameters

Parameter	Description
p_this_app	Current application ID.
p_next_app_page_sess	Application and page number to redirect to. Separate multiple pages using a colon (:) and optionally followed by a colon (:) and the session ID (if control over the session ID is desired).
p_next_url	URL to redirect to (use this instead of p_next_app_page_sess).

Example

The following example causes a logout from the current session and redirects to page 99 of application 1000.

```
BEGIN
   APEX_CUSTOM_AUTH.LOGOUT (
     p_this_app => '1000',
     p_next_app_page_sess => '1000:99');
END;
```

POST_LOGIN Procedure

This procedure performs session registration, assuming the authentication step has been completed. It can be called only from within an Oracle Application Express application page context.

Syntax

```
APEX_CUSTOM_AUTH.POST_LOGIN(
      p_uname IN VARCHAR2 DEFAULT NULL,
p_session_id IN VARCHAR2 DEFAULT NULL,
p_app_page IN VARCHAR2 DEFAULT NULL,
p_preserve_case IN BOOLEAN DEFAULT FALSE);
```

Parameter

Table 5–7 describes the parameters available in the POST_LOGIN procedure.

Table 5–7 POST_LOGIN Parameters

Parameter	Description
p_uname	Login name of user.
p_session_id	Current Oracle Application Express session ID.
p_app_page	Current application ID and after login page separated by a colon (:).
p_preserve_case	If true, do not include p_uname in uppercase during session registration.

Example

The following example performs the session registration following a successful authentication.

```
BEGIN
   APEX_CUSTOM_AUTH.POST_LOGIN (
     p_uname => 'FRANK',
      p_session_id => V('APP_SESSION'),
      p_app_page => :APP_ID||':1');
END;
```

SESSION_ID_EXISTS Function

This function returns a Boolean result based on the global package variable containing the current Oracle Application Express session ID. Returns true if the result is a positive number and returns false if the result is a negative number.

Syntax

```
APEX_CUSTOM_AUTH.SESSION_ID_EXISTS
RETURN BOOLEAN;
```

Example

The following example checks whether the current session ID is valid and exists.

```
DECLARE
    L_VAL BOOLEAN;
BEGIN
   L_VAL := APEX_CUSTOM_AUTH.SESSION_ID_EXISTS;
   IF VAL THEN
       htp.p('Exists');
    ELSE
       htp.p('Does not exist');
   END IF;
END;
```

SET_SESSION_ID Procedure

This procedure sets APEX_APPLICATION.G_INSTANCE global variable. This procedure requires the parameter P_SESSION_ID (NUMBER) which specifies a session

Syntax

```
APEX_CUSTOM_AUTH.SET_SESSION_ID(
```

Parameters

Table 5–8 describes the parameters available in the SET_SESSION_ID procedure.

Table 5–8 SET_SESSION_ID Parameters

Parameter	Description
p_session_id	The session ID to be registered.

Example

In the following example, the session ID value registered is retrieved from the browser cookie.

APEX_CUSTOM_AUTH.SET_SESSION_ID(APEX_CUSTOM_AUTH.GET_SESSION_ID_FROM_COOKIE);

SET_SESSION_ID_TO_NEXT_VALUE Procedure

This procedure combines the operation of GET_NEXT_SESSION_ID and SET_ SESSION_ID in one call.

Syntax

APEX_CUSTOM_AUTH.SET_SESSION_ID_TO_NEXT_VALUE;

Example

In the following example, if the current session is not valid, a new session ID is generated and registered.

```
IF NOT APEX_CUSTOM_AUTH.SESSION_ID_EXISTS THEN
    APEX_CUSTOM_AUTH.SET_SESSION_ID_TO_NEXT_VALUE;
END IF;
```

SET_USER Procedure

This procedure sets the APEX_APPLICATION.G_USER global variable. SET_USER requires the parameter P_USER (VARCHAR2) which defines a user ID.

Syntax

```
APEX_CUSTOM_AUTH.SET_USER(
  p_user IN VARCHAR2);
```

Parameters

Table 5–9 describes the parameters available in the SET_USER procedure.

Table 5–9 SET_USER Parameters

Parameter	Description
p_user	The user ID to be registered.

Example

In the following example, if the current application user is **NOBODY**, then **JOHN.DOE** is registered as the application user.

```
IF V('APP_USER') = 'NOBODY' THEN
   APEX_CUSTOM_AUTH.SET_USER('JOHN.DOE');
END IF;
```

APEX_LDAP

You can use APEX_LDAP to perform various operations related to Lightweight Directory Access Protocol (LDAP) authentication.

Topics in this section include:

- **AUTHENTICATE Function**
- GET_ALL_USER_ATTRIBUTES Procedure
- GET_USER_ATTRIBUTES Procedure
- IS_MEMBER Function
- MEMBER_OF Function
- MEMBER_OF2 Function

AUTHENTICATE Function

The AUTHENTICATE function returns a boolean true if the user name and password can be used to perform a SIMPLE_BIND_S, call using the provided search base, host, and port.

Syntax

```
APEX_LDAP.AUTHENTICATE(
  p_search_base IN VARCHAR2,
  p_host IN VARCHAR2,
p_port IN VARCHAR2 DEFAULT 389)
RETURN BOOLEAN;
```

Parameters

Table 6–1 describes the parameters available in the AUTHENTICATE function.

Table 6-1 AUTHENTICATE Parameters

Parameter	Description
p_username	Login name of the user.
p_password	Password for p_username.
p_search_base	LDAP search base, for example, dc=users, dc=my, dc=org.
p_host	LDAP server host name.
p_port	LDAP server port number.

Example

The following example demostrates how to use the APEX_LDAP.AUTHENTICATE function to verify user credentials against an LDAP Server.

```
IF APEX_LDAP.AUTHENTICATE(
   p_username =>'firstname.lastname',
   p_password =>'abcdef',
   p_search_base => 'cn=user,l=amer,dc=my_company,dc=com',
   p_host => 'our_ldap_sever.my_company.com',
    p_port => 389) THEN
    dbms_output.put_line('authenticated');
   dbms_output.put_line('authentication failed');
END IF;
```

GET_ALL_USER_ATTRIBUTES Procedure

The GET_ALL_USER_ATTRIBUTES procedure returns two OUT arrays of user_ attribute names and values for the user name designated by p_username (with password if required) using the provided auth base, host, and port.

Syntax 1 4 1

```
APEX_LDAP.GET_ALL_USER_ATTRIBUTES(
    p_username IN VARCHAR2 DEFAULT NULL,
   p_pass IN VARCHAR2 DEFAULT NULL,
p_auth_base IN VARCHAR2 DEFAULT NULL,
p_host IN VARCHAR2,
    p_port
                         IN VARCHAR2 DEFAULT 389,
    p_port in varchar2 berauli 305,
p_attributes OUT wwv_flow_global.vc_arr2,
    p_attribute_values OUT wwv_flow_global.vc_arr2);
```

Parameters

Table 6–2 describes the parameters for the GET_ALL_USER_ATTRIBUTES procedure.

Table 6–2 GET_ALL_USER_ATTRIBUTES Parameters

Parameter	Description
p_username	Login name of the user.
p_pass	Password for p_username.
p_auth_base	LDAP search base, for example, dc=users, dc=my, dc=org.
p_host	LDAP server host name.
p_port	LDAP server port number.
p_attributes	An array of attribute names returned.
p_attribute_values	An array of values returned for each corresponding attribute name returned in p_attributes.

Example

The following example demonstrates how to use the APEX_LDAP.GET_ALL_USER_ ATTRIBUTES procedure to retrieve all attribute value's associated to a user.

```
DECLARE.
    L_ATTRIBUTES
                       wwv_flow_global.vc_arr2;
    L_ATTRIBUTE_VALUES wwv_flow_global.vc_arr2;
BEGIN
    APEX_LDAP.GET_ALL_USER_ATTRIBUTES(
       p_username => 'firstname.lastname',
        p_pass
                          => 'abcdef',
       p_pass => 'abcdef',
p_auth_base => 'cn=user,l=amer,dc=my_company,dc=com',
p_host => 'our_ldap_sever.my_company.com',
        p_port
                          => '389',
        p_attributes => L_ATTRIBUTES,
        p_attribute_values => L_ATTRIBUTE_VALUES);
     FOR i IN L_ATTRIBUTES.FIRST..L_ATTRIBUTES.LAST LOOP
         htp.p('attribute name: '||L_ATTRIBUTES(i));
         htp.p('attribute value: '||L_ATTRIBUTE_VALUES(i));
     END LOOP;
END:
```

GET_USER_ATTRIBUTES Procedure

The GET_USER_ATTRIBUTES procedure returns an OUT array of user_attribute values for the user name designated by p_username (with password if required) corresponding to the attribute names passed in p_attributes using the provided auth base, host, and port.

Syntax

```
APEX_LDAP.GET_USER_ATTRIBUTES(
      p_username IN VARCHAR2 DEFAULT NULL,
p_ass IN VARCHAR2 DEFAULT NULL,
p_auth_base IN VARCHAR2,
p_host IN VARCHAR2,
p_port IN VARCHAR2 DEFAULT 389,
p_attributes IN wwv_flow_global.vc_arr2,
       p_attribute_values OUT wwv_flow_global.vc_arr2);
```

Parameters

Table 6–3 describes the parameters available in the GET_USER_ATTRIBUTES procedure.

Table 6-3 GET USER ATTRIBUTES Parameters

Parameter	Description
p_username	Login name of the user.
p_pass	Password for p_username.
p_auth_base	LDAP search base, for example, dc=users, dc=my, dc=org.
p_host	LDAP server host name.
p_port	LDAP server port number.
p_attributes	An array of attribute names for which values are to be returned.
p_attribute_values	An array of values returned for each corresponding attribute name in p_attributes.

Example

The following example demonstrates how to use the APEX_LDAP.GET_USER_ ATTRIBUTES procedure to retrieve a specific attribute value associated to a user.

```
DECLARE
   L_ATTRIBUTES wwv_flow_global.vc_arr2;
   L_ATTRIBUTE_VALUES wwv_flow_global.vc_arr2;
   L_ATTRIBUTES(1) := 'xxxxxxxxxx'; /* name of the employee number attribute */
    APEX_LDAP.GET_USER_ATTRIBUTES(
       p_username => 'firstname.lastname',
       p_pass => NULL,
       p_auth_base => 'cn=user, l=amer, dc=my_company, dc=com',
       p_host => 'our_ldap_sever.my_company.com',
       p_port => '389',
       p_attributes => L_ATTRIBUTES,
        p_attribute_values => L_ATTRIBUTE_VALUES);
END;
```

IS_MEMBER Function

The IS_MEMBER function returns a boolean true if the user named by p_username (with password if required) is a member of the group specified by the p_group and p_group_base parameters using the provided auth base, host, and port.

Syntax 1 4 1

```
APEX_LDAP.IS_MEMBER(
  p_pass
  p_auth_base IN VARCHAR2,
  p_host IN VARCHAR2,
           IN VARCHAR2 DEFAULT 389,
  p_port
  p_group IN VARCHAR2,
  p_group_base IN VARCHAR2)
RETURN BOOLEAN;
```

Parameters

Table 6–4 describes the parameters available in the IS_MEMBER function.

Table 6-4 IS_MEMBER Parameters

Parameter	Description
p_username	Login name of the user.
p_pass	Password for p_username.
p_auth_base	LDAP search base, for example, dc=users, dc=my, dc=org.
p_host	LDAP server host name.
p_port	LDAP server port number.
p_group	Name of the group to be search for membership.
p_group_base	The base from which the search should be started.

Example

The following example demonstrates how to use the APEX_LDAP.IS_MEMBER function to verify whether a user is a member of a group against an LDAP server.

```
DECLARE
   L_VAL boolean;
BEGIN
   L_VAL := APEX_LDAP.IS_MEMBER(
       p_username =>'firstname.lastname',
       p_pass =>'abcdef',
       p_auth_base => 'cn=user, l=amer, dc=my_company, dc=com',
       p_host => 'our_ldap_sever.my_company.com',
       p_port => 389,
       p_group => 'group_name',
       p_group_base => 'group_base');
   IF L_VAL THEN
       htp.p('Is a member.');
       htp.p('Not a member.');
   END IF;
END;
```

MEMBER_OF Function

The MEMBER_OF function returns an array of groups the user name designated by p_ username (with password if required) belongs to, using the provided auth base, host, and port.

Syntax

```
APEX_LDAP.MEMBER_OF(
   p_pass IN VARCHAR2 DEFAULT NULL,
  p_auth_base IN VARCHAR2,
  p_host IN VARCHAR2,
p_port IN VARCHAR2 DEFAULT 389)
RETURN wwv_flow_global.vc_arr2;
```

Parameters

Table 6–5 describes the parameters available in the MEMBER_OF function.

Table 6–5 MEMBER_OF Parameters

Parameter	Description
p_username	Login name of the user.
p_pass	Password for p_username.
p_auth_base	LDAP search base, for example, dc=users, dc=my, dc=org.
p_host	LDAP server host name.
p_port	LDAP server port number.

Example

The following example demonstrates how to use the APEX_LDAP.MEMBER_OF function to retrieve all the groups designated by the specified username.

```
DECLARE
     L_MEMBERSHIP
                             wwv_flow_global.vc_arr2;
BEGIN
     L_MEMBERSHIP := APEX_LDAP.MEMBER_OF(
         p_username => 'firstname.lastname',
p_pass => 'abcdef',
p_auth_base => 'cn=user,l=amer,dc=my_company,dc=com',
p_host => 'our_ldap_sever.my_company.com',
p_port => '389');
     FOR i IN L_MEMBERSHIP.FIRST..L_MEMBERSHIP.LAST LOOP
         htp.p('Member of: '||L_MEMBERSHIP(i));
     END LOOP;
END;
```

MEMBER_OF2 Function

The MEMBER_OF2 function returns a VARCHAR2 colon delimited list of groups the user name designated by p_username (with password if required) belongs to, using the provided auth base, host, and port.

Syntax 1 4 1

```
APEX_LDAP.MEMBER_OF2(
  p_pass
  p_auth_base IN VARCHAR2,
  p_host IN VARCHAR2,
p_port IN VARCHAR2 DEFAULT 389)
RETURN VARCHAR2;
```

Parameters

Table 6–6 describes the parameters available in the MEMBER_OF2 function.

Table 6–6 MEMBER_OF2 Parameters

Parameter	Description
p_username	Login name of the user.
p_pass	Password for p_username.
p_auth_base	LDAP search base, for example, dc=users, dc=my, dc=org.
p_host	LDAP server host name.
p_port	LDAP server port number.

Example

The following example demonstrates how to use the APEX_LDAP.MEMBER_OF2 function to retreive all the groups designated by the specified username.

```
DECLARE
   L_VAL varchar2(4000);
BEGIN
   L_VAL := APEX_LDAP.MEMBER_OF2(
       p_username => 'firstname.lastname',
       p_pass => 'abcdef',
       p_auth_base => 'cn=user,l=amer,dc=my_company,dc=com',
       p_host => 'our_ldap_sever.my_company.com',
       p_port => 389);
   htp.p('Is Member of:'||L_VAL);
END;
```

APEX_INSTANCE_ADMIN

The APEX_INSTANCE_ADMIN package provides utilities for managing an Oracle Application Express runtime environment. You use the APEX_INSTANCE_ADMIN package to get and set email settings, wallet settings, report printing settings and to manage scheme to workspace mappings. APEX_INSTANCE_ADMIN can be executed by the SYS, SYSTEM, and APEX_030200 database users as well as any database user granted the role APEX_ADMINISTRATOR_ROLE.

Topics in this section include:

- ADD_SCHEMA Procedure
- ADD_WORKSPACE Procedure
- **GET_PARAMETER Function**
- **GET_SCHEMAS** Function
- REMOVE_SAVED_REPORTS Procedure
- REMOVE_SCHEMA Procedure
- REMOVE_WORKSPACE Procedure
- SET_PARAMETER Procedure
- **Available Parameter Values**

ADD_SCHEMA Procedure

The ADD_SCHEMA procedure adds a schema to a workspace to schema mapping.

Syntax

```
APEX_INSTANCE_ADMIN.ADD_SCHEMA(
    p_workspace IN VARCHAR2,
p_schema IN VARCHAR2);
```

Parameters

Table 7–1 describes the parameters available in the ADD_SCHEMA procedure.

Table 7–1 ADD_SCHEMA Parameters

Parameter	Description
p_workspace	The name of the workspace to which the schema mapping will be added.
p_schema	The schema to add to the schema to workspace mapping.

Example

The following example demonstrates how to use the ADD_SCHEMA procedure to map a schema mapped to a workspace.

```
BEGIN
    APEX_INSTANCE_ADMIN.ADD_SCHEMA('MY_WORKSPACE','FRANK');
END;
```

ADD_WORKSPACE Procedure

The ADD_WORKSPACE procedure adds a workspace to an Application Express Instance.

Syntax

```
APEX_INSTANCE_ADMIN.ADD_WORKSPACE(
    p_workspace_id IN NUMBER DEFAULT NULL,
p_workspace IN VARCHAR2,
p_primary_schema IN VARCHAR2,
     p_additional_schemas IN VARCHAR2 );
```

Parameters

Table 7–2 describes the parameters available in the ADD_WORKSPACE procedure.

Table 7-2 ADD_WORKSPACE Parameters

Parameter	Description
p_workspace_id	The ID to uniquely identify the workspace in an Application Express instance. This may be left null and a new unique ID will be assigned.
p_workspace	The name of the workspace to be added.
p_primary_schema	The primary database schema to associate with the new workspace.
p_additional_schemas	A colon delimited list of additional schemas to associate with this workspace.

Example

The following example demonstrates how to use the ADD_WORKSPACE procedure to add a new workspace named MY_WORKSPACE using the primary schema, SCOTT, along with additional schema mappings for HR and OE.

```
APEX_INSTANCE_ADMIN.ADD_WORKSPACE(8675309,'MY_WORKSPACE','SCOTT','HR:OE');
END;
```

GET_PARAMETER Function

The GET_PARAMETER function retrieves the value of a parameter used in administering a runtime environment.

Syntax

```
APEX_INSTANCE_ADMIN.GET_PARAMETER(
  RETURN VARCHAR2;
```

Parameters

Table 7–3 describes the parameters available in the GET_PARAMETER function.

Table 7–3 GET_PARAMETER Parameters

Parameter	Description
p_parameter	The instance parameter to be retrieved.
	See "Available Parameter Values" on page 7-10.

Example

The following example demonstrates how to use the GET_PARAMETER function to retrieve the SMTP_HOST_ADDRESS parameter currently defined for an Oracle Application Express instance.

```
DECLARE
   L_VAL VARCHAR2(4000);
BEGIN
   L_VAL :=APEX_INSTANCE_ADMIN.GET_PARAMETER('SMTP_HOST_ADDRESS');
    DBMS_OUTPUT.PUT_LINE('The SMTP Host Setting Is: '||L_VAL);
END;
```

GET_SCHEMAS Function

The GET_SCHEMAS function retrieves a comma-delimited list of schemas that are mapped to a given workspace.

Syntax

```
APEX_INSTANCE_ADMIN.GET_SCHEMAS(
   p_workspace IN VARCHAR2)
RETURN VARCHAR2;
```

Parameters

Table 7–4 describes the parameters available in the GET_SCHEMAS function.

Table 7–4 GET_SCHEMAS Parameters

Parameter	Description
p_workspace	The name of the workspace from which to retrieve the schema list.

Example

The following example demonstrates how to use the GET_SCHEMA function to retrieve the underlying schemas mapped to a workspace.

```
DECLARE
    L_VAL VARCHAR2(4000);
    L_VAL :=APEX_INSTANCE_ADMIN.GET_SCHEMAS('MY_WORKSPACE');
    {\tt DBMS\_OUTPUT.PUT\_LINE('The schemas for my workspace: '||L\_VAL);}
END;
```

REMOVE_SAVED_REPORTS Procedure

The REMOVE_SAVED_REPORTS procedure removes all user saved interactive report settings for a particular application or for the entire instance.

Syntax

```
APEX_INSTANCE_ADMIN.REMOVE_SAVED_REPORTS(
```

Parameters

Table 7–5 describes the parameters available in the REMOVE_SAVED_REPORTS procedure.

Table 7–5 REMOVE_SAVED_REPORTS Parameters

Parameter	Description
p_application_id	The ID of the application for which to remove user saved interactive report information. If this parameter is left null, all user saved interactive reports for the entire instance will be removed.

Example

The following example demonstrates how to use the REMOVE_SAVED_REPORTS procedure to remove user saved interactive report information for the application with an ID of 100.

```
BEGIN
   APEX_INSTANCE_ADMIN.REMOVE_SAVED_REPORTS(100);
END;
```

REMOVE_SCHEMA Procedure

This REMOVE_SCHEMA procedure removes a workspace to schema mapping.

Syntax

```
APEX_INSTANCE_ADMIN.REMOVE_SCHEMA(
    p_workspace IN VARCHAR2,
p_schema IN VARCHAR2);
```

Parameters

Table 7–6 describes the parameters available in the REMOVE_SCHEMA procedure.

Table 7–6 REMOVE_SCHEMA Parameters

Parameter	Description
p_workspace	The name of the workspace from which the schema mapping will be removed.
p_schema	The schema to remove from the schema to workspace mapping.

Example

The following example demonstrates how to use the REMOVE_SCHEMA procedure to remove the schema named Frank from the MY_WORKSPACE workspace to schema mapping.

```
BEGIN
    \verb|APEX_INSTANCE_ADMIN.REMOVE_SCHEMA| ( 'MY_WORKSPACE', 'FRANK') ; \\
END;
```

REMOVE_WORKSPACE Procedure

The REMOVE_WORKSPACE procedure removes a workspace from an Application Express instance.

Syntax

```
APEX_INSTANCE_ADMIN.REMOVE_WORKSPACE(
   p_workspace IN VARCHAR2,
p_drop_users IN VARCHAR2 DEFAULT 'N',
    p_drop_tablespaces IN VARCHAR2 DEFAULT 'N' );
```

Parameters

Table 7–7 describes the parameters available in the REMOVE_WORKSPACE procedure.

Table 7–7 REMOVE_WORKSPACE Parameters

Parameter	Description
p_workspace	The name of the workspace to be removed.
p_drop_users	${}^{_{}}{}^{_{}}{}^{_{}}{}^{_{}}$ to drop the database user associated with the workspace. The default is ${}^{_{}}{}^{_{}}{}^{_{}}$
p_drop_tablespaces	'Y' to drop the tablespace associated with the database user associated with the workspace. The default is 'N'.

Example

The following example demonstrates how to use the REMOVE_WORKSPACE procedure to remove an existing workspace named MY_WORKSPACE, along with the associated database users and tablespace.

```
APEX_INSTANCE_ADMIN.REMOVE_WORKSPACE('MY_WORKSPACE','Y','Y');
END;
```

SET_PARAMETER Procedure

The SET_PARAMETER procedure sets a parameter used in administering a runtime environment.

Syntax

```
APEX_INSTANCE_ADMIN.SET_PARAMETER(
    p_parameter IN VARCHAR2, p_value IN VARCHAR2 DEFAULT 'N');
```

Parameters

Table 7–8 describes the parameters available in the SET_PARAMETER procedure.

Table 7–8 SET_PARAMETER Parameters

Parameter	Description
p_parameter	The instance parameter to be set.
p_value	The value of the parameter.
	See "Available Parameter Values" on page 7-10.

Example

The following example demonstrates how to use the SET_PARAMETER procedure to set the SMTP_HOST_ADDRESS parameter for an Oracle Application Express instance.

```
APEX_INSTANCE_ADMIN.SET_PARAMETER('SMTP_HOST_ADDRESS', 'mail.mycompany.com');
END;
```

Available Parameter Values

Table 7–9 lists all the available parameter values you can set within the APEX_ INSTANCE_ADMIN package, including parameters for email, wallet, and reporting printing.

Table 7-9 Available Parameters

Parameter Name	Description
SMTP_FROM	Defines the "from" address for administrative tasks that generate email, such as approving a provision request or resetting a password.
	Enter a valid email address, for example:
	someone@somewhere.com
SMTP_HOST_ADDRESS	Defines the server address of the SMTP server. If you are using another server as an SMTP relay, change this parameter to that server's address.
	Default setting:
	localhost
SMTP_HOST_PORT	Defines the port the SMTP server listens to for mail requests. Default setting:
	25
WALLET_PATH	The path to the wallet on the file system, for example:
	file:/home/ <username>/wallets</username>
WALLET_PWD	The password associated with the wallet.
PRINT_BIB_LICENSED	Specify either standard support or advanced support. Advanced support requires an Oracle BI Publisher license. Valid values include:
	■ STANDARD
	ADVANCED
PRINT_SVR_PROTOCOL	Valid values include:
	■ http
	https
PRINT_SVR_HOST	Specifies the host address of the print server converting engine, for example, localhost. Enter the appropriate host address if the print server is installed at another location.
PRINT_SVR_PORT	Defines the port of the print server engine, for example 8888. Value must be a positive integer.
PRINT_SVR_SCRIPT	Defines the script that is the print server engine, for example:
	/xmlpserver/convert

See Also: "Configuring Email in a Runtime Environment", "Configuring a Wallet in a Runtime Environment", "Configuring Report Printing Settings in a Runtime Environment" in Oracle Application Express Administration Guide.

APEX_UI_DEFAULT_UPDATE

The APEX_UI_DEFAULT_UPDATE package provides procedures to access user interface defaults from within SQL Developer or SQL*Plus.

You can use this package to set the user interface defaults associated with a table within a schema. The package must be called from within the schema that owns the table you are updating.

User interface defaults enable you to assign default user interface properties to a table, column, or view within a specified schema. When you create a form or report using a wizard, the wizard uses this information to create default values for region and item properties. Utilizing user interface defaults can save valuable development time and has the added benefit of providing consistency across multiple pages in an application.

Topics in this section include:

- UPD_DISPLAY_IN_FORM Procedure
- UPD_DISPLAY_IN_REPORT Procedure
- UPD_FORM_REGION_TITLE Procedure
- UPD_ITEM_DISPLAY_HEIGHT Procedure
- UPD_ITEM_DISPLAY_WIDTH Procedure
- UPD_ITEM_FORMAT_MASK Procedure
- UPD ITEM HELP Procedure
- UPD LABEL Procedure
- UPD_REPORT_ALIGNMENT Procedure
- UPD_REPORT_FORMAT_MASK Procedure
- UPD_REPORT_REGION_TITLE Procedure

See Also: "Managing User Interface Defaults" in *Oracle Application* Express Application Builder User's Guide

UPD_DISPLAY_IN_FORM Procedure

The UPD_DISPLAY_IN_FORM procedure sets the display in form user interface defaults. This user interface default will be used by wizards when you select to create a form based upon the table. It controls whether the column will be included by default or not.

Syntax

```
APEX_UI_DEFAULT_UPDATE.UPD_DISPLAY_IN_FORM (
     p_table_name IN VARCHAR2,
p_column_name IN VARCHAR2,
p_display_in_form IN VARCHAR2);
```

Parameters

Table 8–1 describes the parameters available in the UPD_DISPLAY_IN_FORM procedure.

Table 8-1 UPD_DISPLAY_IN_FORM Parameters

Parameter	Description
p_table_name	Table name
p_column_name	Column name
p_display_in_form	Determines whether or not to display in the form by default, valid values are Y and N

Example

In the following example, when creating a Form against the DEPT table, the display option on the DEPTNO column would default to 'No'.

```
APEX_UI_DEFAULT_UPDATE.UPD_DISPLAY_IN_FORM(
   p_table_name => 'DEPT',
    p_column_name => 'DEPTNO',
    p_display_in_form => 'N');
```

UPD_DISPLAY_IN_REPORT Procedure

The UPD_DISPLAY_IN_REPORT procedure sets the display in report user interface default. This user interface default will be used by wizards when you select to create a report based upon the table and controls whether the column will be included by default or not.

Syntax

```
APEX_UI_DEFAULT_UPDATE.UPD_DISPLAY_IN_REPORT (
    p_table_name IN VARCHAR2,
p_column_name IN VARCHAR2,
p_display_in_report IN VARCHAR2);
```

Parameters

Table 8–2 describes the parameters available in the UPD_DISPLAY_IN_REPORT procedure.

Table 8-2 UPD_DISPLAY_IN_REPORT Parameters

Parameter	Description
p_table_name	Table name
p_column_name	Column name
p_display_in_report	Determines whether or not to display in the report by default, valid values are ${\tt Y}$ and ${\tt N}$

Example

In the following example, when creating a Report against the DEPT table, the display option on the DEPTNO column would default to 'No'.

```
APEX UI DEFAULT UPDATE. UPD DISPLAY IN REPORT (
  p_table_name => 'DEPT',
   p_column_name => 'DEPTNO',
   p_display_in_report => 'N');
```

UPD_FORM_REGION_TITLE Procedure

The UPD_FORM_REGION_TITLE procedure updates the Form Region Title user interface default. User interface defaults are used in wizards when you create a form based upon the specified table.

Syntax

```
APEX_UI_DEFAULT_UPDATE.UPD_FORM_REGION_TITLE (
  p_form_region_title IN VARCHAR2 DEFAULT NULL);
```

Parameters

Table 8–3 describes the parameters available in the UPD_FORM_REGION_TITLE procedure.

Table 8–3 APEX_UI_DEFAULT_UPDATE Parameters

Parameter	Description
p_table_name	Table name
p_form_region_title	Desired form region title

Example

This example demonstrates how to set the Forms Region Title user interface default on the DEPT table.

```
APEX_UI_DEFAULT_UPDATE.UPD_FORM_REGION_TITLE (
   p_table_name => 'DEPT',
   p_form_region_title => 'Deptartment Details');
```

UPD_ITEM_DISPLAY_HEIGHT Procedure

The UPD_ITEM_DISPLAY_HEIGHT procedure sets the item display height user interface default. This user interface default will be used by wizards when you select to create a form based upon the table and include the specified column. Display height controls if the item will be a text box or a text area.

Syntax

```
APEX_UI_DEFAULT_UPDATE.UPD_ITEM_DISPLAY_HEIGHT (
    p_table_name IN VARCHAR2,
p_column_name IN VARCHAR2,
p_display_height IN NUMBER);
```

Parameters

Table 8-4 describes the parameters available in the UPD_ITEM_DISPLAY_HEIGHT procedure.

Table 8-4 UPD_ITEM_DISPLAY_HEIGHT Parameters

Parameter	Description
p_table_name	Table name
p_column_name	Column name
p_display_height	Display height of any items created based upon this column

Example

The following example sets a default item height of 3 when creating an item on the DNAME column against the DEPT table.

```
APEX_UI_DEFAULT_UPDATE.UPD_ITEM_DISPLAY_HEIGHT(
  p_table_name => 'DEPT',
  p_column_name => 'DNAME',
  p_display_height => 3);
```

UPD_ITEM_DISPLAY_WIDTH Procedure

The UPD_ITEM_DISPLAY_WIDTH procedure sets the item display width user interface default. This user interface default will be used by wizards when you select to create a form based upon the table and include the specified column.n.

Syntax 1 4 1

```
APEX_UI_DEFAULT_UPDATE.UPD_ITEM_DISPLAY_WIDTH (
     p_table_name IN VARCHAR2,
p_column_name IN VARCHAR2,
p_display_width IN NUMBER);
```

Parameters

Table 8–5 describes the parameters available in the UPD_ITEM_DISPLAY_WIDTH procedure.

Table 8–5 UPD_ITEM_DISPLAY_WIDTH Parameters

Parameter	Description
p_table_name	Table name
p_column_name	Column name
p_display_width	Display width of any items created based upon this column

Example

The following example sets a default item width of 5 when creating an item on the DEPTNO column against the DEPT table.

```
APEX_UI_DEFAULT_UPDATE.UPD_ITEM_DISPLAY_WIDTH(
  p_table_name => 'DEPT',
  p_column_name => 'DEPTNO',
  p_display_width => 5);
```

UPD_ITEM_FORMAT_MASK Procedure

The UPD_ITEM_FORMAT_MASK procedure sets the item format mask user interface default. This user interface default will be used by wizards when you select to create a form based upon the table and include the specified column. Item format mask is typically used to format numbers and dates.

Syntax

```
APEX_UI_DEFAULT_UPDATE.UPD_ITEM_FORMAT_MASK (
    p_table_name IN VARCHAR2,
p_column_name IN VARCHAR2,
p_format_mask IN VARCHAR2 DEFAULT NULL);
```

Parameters

Table 8–6 describes the parameters available in the UPD_ITEM_FORMAT_MASK procedure.

Table 8–6 UPD_ITEM_FORMAT_MASK Parameters

Parameter	Description
p_table_name	Table name
p_column_name	Column name
p_format_mask	Format mask to be associated with the column

Example

In the following example, when creating a Form against the EMP table, the default item format mask on the HIREDATE column is set to 'DD-MON-YYYY'.

```
APEX_UI_DEFAULT_UPDATE.UPD_ITEM_FORMAT_MASK(
   p_table_name => 'EMP',
   p_column_name => 'HIREDATE',
   p_format_mask=> 'DD-MON-YYYY');
```

UPD_ITEM_HELP Procedure

The UPD_ITEM_HELP procedure updates the help text for the specified table and column. This user interface default will be used when you create a form based upon the table and select to include the specified column.

Syntax

```
APEX_UI_DEFAULT_UPDATE.UPD_ITEM_HELP (
     p_table_name IN VARCHAR2,
p_column_name IN VARCHAR2,
p_help_text IN VARCHAR2 DEFAULT NULL);
```

Parameters

Table 8–7 describes the parameters available in the UPD_ITEM_HELP procedure.

Table 8-7 UPD_ITEM_HELP Parameters

Parameter	Description
p_table_name	Table name
p_column_name	Column name
p_help_text	Desired help text

Example

This example demonstrates how to set the User Interface Item Help Text default for the DEPTNO column in the DEPT table.

```
APEX_UI_DEFAULT_UPDATE.UPD_ITEM_HELP(
  p_table_name => 'DEPT',
  p_column_name => 'DEPTNO',
  p_help_text => 'The number assigned to the department.');
```

UPD_LABEL Procedure

The UPD_LABEL procedure sets the label used for items. This user interface default will be used when you create a form or report based on the specified table and include a specific column.

Syntax

```
APEX_UI_DEFAULT_UPDATE.UPD_ITEM_LABEL (
    p_table_name IN VARCHAR2,
p_column_name IN VARCHAR2,
p_label IN VARCHAR2 DEFAULT NULL);
```

Parameters

Table 8–8 describes the parameters available in the UPD_LABEL procedure.

Table 8-8 UPD_LABEL Parameters

Parameter	Description
p_table_name	Table name
p_column_name	Column name
p_label	Desired item label

Example

This example demonstrates how to set the User Interface Item Label default for the DEPTNO column in the DEPT table.

```
APEX_UI_DEFAULT_UPDATE.UPD_LABEL(
   p_table_name => 'DEPT',
  p_column_name => 'DEPTNO',
  p_label => 'Department Number');
```

UPD_REPORT_ALIGNMENT Procedure

The UPD_REPORT_ALIGNMENT procedure sets the report alignment user interface default. This user interface default will be used by wizards when you select to create a report based upon the table and include the specified column and determines if the report column should be left, center, or right justified.

Syntax

```
APEX_UI_DEFAULT_UPDATE.UPD_REPORT_ALIGNMENT (
     p_table_name IN VARCHAR2,
p_column_name IN VARCHAR2,
p_report_alignment IN VARCHAR2);
```

Parameters

Table 8–9 describes the parameters available in the UPD_REPORT_ALIGNMENT procedure.

Table 8–9 UPD_REPORT_ALIGNMENT Parameters

Parameter	Description
p_table_name	Table name.
p_column_name	Column name.
p_report_alignment	Defines the alignment of the column in a report. Valid values are L (left), C (center) and R (right).

Example

In the following example, when creating a Report against the DEPT table, the default column alignment on the DEPTNO column is set to Right justified.

```
APEX_UI_DEFAULT_UPDATE.UPD_REPORT_ALIGNMENT(
   p_table_name => 'DEPT',
    p_column_name => 'DEPTNO',
    p_report_alignment => 'R');
```

UPD_REPORT_FORMAT_MASK Procedure

The UPD_REPORT_FORMAT_MASK procedure sets the report format mask user interface default. This user interface default will be used by wizards when you select to create a report based upon the table and include the specified column. Report format mask is typically used to format numbers and dates.

Syntax

```
APEX_UI_DEFAULT_UPDATE.UPD_REPORT_FORMAT_MASK (
   p_table_name IN VARCHAR2,
p_column_name IN VARCHAR2,
p_format_mask IN VARCHAR2 DEFAULT NULL);
```

Parameters

Table 8–10 describes the parameters available in the UPD_REPORT_FORMAT_MASK procedure.

Table 8–10 UPD_REPORT_FORMAT_MASK Parameters

Parameter	Description
p_table_name	Table name
p_column_name	Column name
p_format_mask	Format mask to be associated with the column whenever it is included in a report

Example

In the following example, when creating a Report against the EMP table, the default format mask on the HIREDATE column is set to 'DD-MON-YYYY'.

```
APEX_UI_DEFAULT_UPDATE.UPD_REPORT_FORMAT_MASK(
   p_table_name => 'EMP',
   p_column_name => 'HIREDATE',
   p_format_mask=> 'DD-MON-YYYY');
```

UPD_REPORT_REGION_TITLE Procedure

The UPD_REPORT_REGION_TITLE procedure sets the Report Region Title. User interface defaults are used in wizards when a report is created on a table.

Syntax

```
APEX_UI_DEFAULT_UPDATE.UPD_REPORT_REGION_TITLE (
  p_table_name IN VARCHAR2,
```

Parameters

Table 8–11 describes the parameters available in the UPD_REPORT_REGION_TITLE procedure.

Table 8–11 UPD_REPORT_REGION_TITLE Parameters

Parameter	Description
p_table_name	Table name
p_report_region_title	Desired report region title

Example

This example demonstrates how to set the Reports Region Title user interface default on the DEPT table.

```
APEX_UI_DEFAULT_UPDATE.UPD_REPORT_REGION_TITLE (
   p_table_name => 'DEPT',
   p_report_region_title => 'Deptartments');
```

JavaScript APIs

This section describes JavaScript functions and objects included with Oracle Application Express and available on every page. You can use these functions and objects to provide client-side functionality, such as showing and hiding page elements, or making XML HTTP Asynchronous JavaScript and XML (AJAX) requests.

Topics in this section include:

- x(pNd)
- \$v(pNd)
- \$s(pNd, pValue)
- \$u_Carray(pNd)
- \$u_Narray(pNd)
- \$nvl(pTest, pDefault)
- doSubmit(pRequest)
- confirmDelete(pMessage, pRequest)
- \$x_Style(pNd, pStyle, pString)
- $x_Hide(pNd)$
- \$x_Show(pNd)
- \$x_Toggle(pNd)
- $x_Remove(pNd)$
- \$x_Value(pNd,pValue)
- \$x_UpTill(pNd, pToTag)
- \$x_ItemRow(pNd,pFunc)
- \$x_HideItemRow(pNd)
- \$x_ShowItemRow(pNd)
- \$x_ToggleItemRow(pNd)
- \$x_HideAllExcept(pNd,pNdArray)
- \$x_HideSiblings(pNd)
- \$x_ShowSiblings(pNd)
- \$x_Class(pNd,pClass)
- \$x_SetSiblingsClass(pNd, pClass, pNdClass)

- \$x_ByClass(pClass, pNd, pTag)
- \$x_ShowAllByClass(pNd, pClass, pTag)
- \$x_ShowChildren(pNd)
- \$x_HideChildren(pNd)
- \$x_disableItem(pNd, pTest)
- \$f_get_emptys(pNd, pClassFail, pClass)
- \$v_Array(pNd)

- returnInput(p_R, p_D)
- setReturn(p_R,p_D)
- \$f_First_field(pNd)
- GetCookie (pName)
- SetCookie (pName,pValue)

\$x(pNd)

Given a DOM node or string ID (pNd), this function returns a DOM node if the element is on the page, or returns false if it is not.

Return Value

(DOM Node | false)

Parameters

pNd (DOM Node | string ID)

\$v(pNd)

Given a DOM node or string ID (pNd), this function returns the value of an Application Express item in the same format as it would be posted.

Parameters

pNd (DOM Node | string ID)

\$s(pNd, pValue)

Given a DOM node or string ID (pNd), this function sets the Application Express item value taking into account what type of item it is.

Parameters

```
pNd (DOM Node | string ID)
pValue (String | Array)
```

\$u_Carray(pNd)

Given a DOM node or string ID or an array (pNd), this function returns an array. Used for creating DOM based functionality that can accept a single or multiple DOM nodes.

Return Value

pNd (DOM Node | string ID | Array)

Parameters

Array

\$u_Narray(pNd)

Given a DOM node or string ID or an array (pNd), this function returns a single value, if an pNd is an array but only has one element the value of that element will be returned otherwise the array will be returned. Used for creating DOM based functionality that can accept a single or multiple DOM nodes.

Return Value

Array (DOM Node | string ID | Array)

Parameters

Array or first value

\$nvl(pTest, pDefault)

If pTest is empty or false return pDefault otherwise return pTest.

Return Value

(string | Array)

Parameters

pTest (String | Array) pDefault (String | Array)

doSubmit(pRequest)

Submits the page setting the Application Express Request value (pRequest).

Parameters

pRequest (String)

confirmDelete(pMessage, pRequest)

Displays a confirmation showing a message (pMessage) and depending on user's choice, submits a page setting request value (pRequest) or cancels page submit.

Parameters

pMessage (string) pRequest (string)

\$x_Style(pNd, pStyle, pString)

Sets a specific style property (pStyle) to given value (pString) of a DOM node or DOM node Array (pNd).

Return Value

```
(DOM node | DOM Array)
```

Parameters

```
pNd (DOM node | string ID | DOM node Array )
pStyle (String)
pString (String)
```

\$x_Hide(pNd)

Hides a DOM node or array of DOM nodes (pNd).

Return Value

(DOM node | Array)

Parameters

pNd (DOM node | string ID | DOM node Array)

\$x_Show(pNd)

Shows a DOM node or array of DOM nodes (pNd).

Return Value

(DOM node | Array)

Parameters

pNd (DOM node | string ID | DOM node Array)

\$x_Toggle(pNd)

Toggles a DOM node or array of DOM nodes (pNd).

Return Value

(DOM node | Array)

Parameters

pNd (DOM node | string ID | Array)

\$x_Remove(pNd)

Removes a DOM node or array of DOM nodes.

Return Value

(DOM Node | Array)

Parameters

pNd (DOM node | string ID | DOM node Array)

\$x_Value(pNd,pValue)

Sets the value (pValue) of a DOM node or array of DOM nodes (pNd).

Return Value

Not applicable.

Parameters

pNd (DOM node | string ID | DOM node Array) pValue (String)

\$x_UpTill(pNd, pToTag)

Starting from a DOM node (pNd), this function cascades up the DOM tree until the tag of node name (pToTag) is found.

Return Value

(DOM Node | false)

Parameters

pNd (DOM Node | string ID) String (pToTag) String (pToClass)

\$x_ItemRow(pNd,pFunc)

Given DOM node or array of DOM nodes, this function (shows, hides, or toggles) the entire row that contains the DOM node or array of DOM nodes. This is most useful when using Page Items.

Return Value

Not applicable.

Parameters

```
pNd (DOM Node | string ID | Dom node Array)
pFunc ['TOGGLE','SHOW','HIDE'] (String )
```

\$x_HideItemRow(pNd)

Given a page item name, this function hides the entire row that holds the item. In most cases, this will be the item and its label.

Return Value

Not applicable.

Parameters

pNd (DOM Node | string ID | DON node Array)

\$x_ShowItemRow(pNd)

Given a page item name, this function shows the entire row that holds the item. In most cases, this will be the item and its label.

Return Value

Not applicable.

Parameters

pNd (DOM node | string ID | DOM note Array)

\$x_ToggleItemRow(pNd)

Given a page item name (pNd), this function toggles the entire row that holds the item. In most cases, this will be the item and its label.

Return Value

Not applicable.

Parameters

pNd (DOM node | string ID | DOM node ray)

\$x_HideAllExcept(pNd,pNdArray)

Hides all DOM nodes referenced in pNdArray and then shows the DOM node referenced by pNd. This is most useful when pNd is also a node in pNdArray.

Return Value

(DOM node | DOM Array)

Parameters

pNd (DOM node | string ID | DOM node Array) pNdArray (DOM node | String | Array)

\$x_HideSiblings(pNd)

Hides all sibling nodes of given pNd.

Return Value

(DOM node)

Parameters

pNd (DOM node | string ID)

\$x_ShowSiblings(pNd)

Shows all sibling DOM nodes of given DOM nodes (pNd).

Return Value

(DOM node)

Parameters

pNd (DOM node | string ID)

\$x_Class(pNd,pClass)

Sets a DOM node or array of DOM nodes to a single class name.

Return Value

Not applicable.

Parameters

pNd (DOM node | string ID | DOM node Array) pClass (String)

\$x_SetSiblingsClass(pNd, pClass, pNdClass)

Sets the class (pClass) of all DOM node siblings of a node (pNd). If pNdClass is not null the class of pNd is set to pNdClass.

Return Value

(DOM node | false)

Parameters

pNd (DOM Nnde | string ID) pClass (String) pThisClass (String)

\$x_ByClass(pClass, pNd, pTag)

Returns an array of DOM nodes by a given class name (pclass). If the pNd parameter is provided, then the returned elements will be all be children of that DOM node. Including the pTag parameter further narrows the list to just return nodes of that tag type.

Return Value

(Array)

Parameters

pClass (String) pNd (DOM node | string ID) pTag (String)

\$x_ShowAllByClass(pNd, pClass, pTag)

Show all the DOM node children of a DOM node (pNd) that have a specific class (pClass) and tag (pTag).

Return Value

Not applicable.

Parameters

pNd (DOM node | string ID) pClass (String) pTag (String)

\$x_ShowChildren(pNd)

Show all DOM node children of a DOM node (pNd).

Return Value

Not applicable.

Parameters

pNd (DOM node | string ID)

\$x_HideChildren(pNd)

Hide all DOM node children of a DOM node (pNd).

Return Value

Not applicable.

Parameters

pNd (DOM node | string ID)

\$x_disableItem(pNd, pTest)

Disables or enables an item or array of items based on (pTest).

Return Value

Not applicable.

```
pNd (DOM node | string ID | DOM node array)
a (true | false)
```

\$f_get_emptys(pNd, pClassFail, pClass)

Checks an item or an array of items to see if any are empty, set the class of all items that are empty to pClassFail, set the class of all items that are not empty to pClass.

Return Value

false, Array of all items that are empty (false | Array)

Parameters

pNd (DOM node | string ID | DOM node Array) Sting (pClassFail) Sting (pClass)

\$v_Array(pNd)

Returns an item value as an array. Useful for multiselects and checkboxes.

Return Value

(Array)

Parameters

pId (DOM Node | string ID)

\$f_ReturnChecked(pNd)

Returns an item value as an array. Useful for radio items and check boxes.

Return Value

(Array)

Parameters

pId (DOM node | string ID)

\$d_ClearAndHide(pNd)

Clears the content of an DOM node or array of DOM nodes and hides them.

Return Value

Not applicable.

Parameters

pNd (DOM node | string ID | DOM node array)

\$f_SelectedOptions(pNd)

Returns the DOM nodes of the selected options of a select item (pNd).

Return Value

(DOM Array)

Parameters

pNd (DOM node | string ID)

\$f_SelectValue(pNd)

Returns the values of the selected options of a select item (pNd).

Return Value

(DOM Array | String)

Parameters

pNd (DOM node | string ID)

\$u_ArrayToString(pArray, pDelim)

Given an array (pArray) return a string with the values of the array delimited with a given delimiter character (pDelim).

Return Value

Not applicable.

Parameters

pArray (pArray) pDelim (String)

\$x_CheckImageSrc(pld,pSearch)

Checks an image (pId) source attribute for a substring (pSearch). The function returns true if a substring (pSearch) is found. It returns false if a substring (pSearch) is not found.

Return Value

(true | false)

Parameters

pId (DOM Node | String) pSearch (pSearch)

\$v_CheckValueAgainst(pThis, pValue)

Checks an page item's (pThis) value against a set of values (pValue). This function returns true if any value matches.

Return Value

(true | false)

Parameters

pThis (DOM node | string ID) pValue (Number | String | Array)

\$f_Hide_On_Value_Item(pThis, pThat, pValue)

Checks an page item's (pThis) value against a value (pValue). If it matches, a DOM node (pThat) is set to hidden. If it does not match, then the DOM node (pThat) is set to visible.

Return Value

(true | false)

```
pThis (DOM node | string ID)
pThat (DOM node | string ID | DOM node Array )
pValue (Number | String | Array)
```

\$f_Show_On_Value_Item(pThis, pThat, pValue)

Checks an page item's (pThis) value against a value (pValue). If it matches, a DOM node (pThat) is set to hidden. If it does not match, then the DOM node (pThat) is set to visible.

Return Value

(true | false)

```
pThis (DOM node | string ID)
pThat (DOM node | string ID | DOM node Array )
pValue (Number | String | Array)
```

\$f_Hide_On_Value_Item_Row(pThis, pThat, pValue)

Checks the value (pValue) of an item (pThis). If it matches, this function hides the table row that holds (pThat). If it does not match, then the table row is shown.

Return Value

```
(true | false)
```

```
pThis (DOM node | string ID)
pThat (DOM node | string ID | DOM node Array )
pValue (Number | String | Array)
```

\$f_Show_On_Value_Item_Row(pThis, pThat, pValue)

Checks the value (pValue) of an item (pThis). If it matches, this function hides the table row that holds (pThat). If it does not match, then the table row is shown.

Return Value

```
(true | false)
```

```
pThis (DOM node | string ID)
pThat (DOM node | string ID | DOM node Array )
pValue (Number | String | Array)
```

\$f_DisableOnValue(pThis, pValue, pThat)

Checks the value (pValue) of an item (pThis). If it matches, this function disables the item or array of items (pThat). If it does not match, then the item is enabled.

Return Value

```
(true | false)
```

```
pThis (DOM node | string ID)
pValue (String)
pThat (DOM node | string ID | DOM node Array )
```

\$x_ClassByClass(pNd, pClass, pTag, pClass2)

Sets a class attribute of an array of nodes that are selected by class.

Return Value

(DOM node | DOM node Array)

Parameters

pNd (DOM node | string ID) pClass (String) pTag (String) pClass2 (String)

\$f_ValuesToArray(pThis, pClass, pTag)

Collects the values of form items contained within DOM node (pThis) of class attribute (pClass) and nodeName (pTag) and returns an array.

Return Value

No applicable.

Parameters

pThis (DOM node | string ID) pCLass (String) pTag (String)

\$x_FormItems(pNd, pType)

Returns all form input items contained in a DOM node (pThis) of a certain type (рТуре).

Return Value

DOM node Array

Parameters

pNd (DOM node | string ID) pType (String)

\$f_CheckAll(pThis, pCheck, pArray)

Check or uncheck (pCheck) all check boxes contained within a DOM node (pThis). If an array of checkboxes DOM nodes (pArray) is provided, use that array for affected check boxes.

Return Value

Not applicable.

Parameters

pThis (DOM node | string ID) pCheck (true | fales) pArray (DOM node array)

\$f_CheckFirstColumn(pNd)

This function sets all checkboxes located in the first column of a table based on the checked state of the calling checkbox (pNd), useful for tabular forms.

Return Value

DOM node Array

Parameters

pNd (DOM node | String)

\$v_PopupReturn(pValue, pThat)

Sets the value of the item in the parent window (pThat), with (pValue) and then closes the popup window.

Return Value

Not applicable.

Parameters

pValue (string) pThat (DOM node | string ID)

\$x_ToggleWithImage(pThis,pNd)

Given an image element (pThis) and a DOM node (pNd), this function toggles the display of the DOM node (pNd). The src attribute of the image element (pThis) will be rewritten. The image src will have any plus substrings replaced with minus substrings or minus substrings will be replaced with plus substrings.

Return Value

(DOM Node)

```
pThis (DOM Node | string ID)
pNd (DOM Nnde | string iD | DOM node Array)
```

\$x_SwitchImageSrc(pNd, pSearch, pReplace)

Checks an image (pId) src attribute for a substring (pSearch). If a substring is found, this function replaces the image entire src attribute with (pReplace).

Return Value

(DOM node | false)

Parameters

pNd (DOM node | string ID) pSearch (String) pReplace (String)

\$x_CheckImageSrc(pNd, pSearch)

Checks an image (pNd) source attribute for a substring (pSearch). The function returns true if a substring (pSearch) is found. It returns false if a substring (pSearch) is not found.

Return Value

(true | fales)

Parameters

pNd (DOM node | string ID) pSearch (String)

\$u_SubString(pText,pMatch)

Returns a true or false if a string (pText) contains a substring (pMatch).

Return Value

(true | false)

Parameters

pText (String) pMatch (String)

html_RemoveAllChildren(pNd)

Use DOM methods to remove all DOM children of DOM node (pND).

Return Value

Not applicable.

Parameters

pNd (DOM node | string ID)

\$v_IsEmpty(pThis)

Returns true or false if a form element is empty, this will consider any whitespace including a space, a tab, a form-feed, as empty.

Return Value

[true | false]

Parameters

pThis (DOM Node | String)

html_SetSelectValue(pld,pValue)

Sets the value (pValue) of a select item (pId). If the value is not found, this functions selects the first option (usually the NULL selection).

Return Value

Not applicable.

Parameters

pId (DOM node | String) pValue (String)

addLoadEvent(pFunction)

Adds an onload function (func) without overwriting any previously specified onload functions.

Return Value

Not applicable.

Parameters

pFunction (Javascript Function)

\$f_Swap(pThis,pThat)

Swaps the form values of two form elements (pThis,pThat).

Return Value

Not applicable.

Parameters

```
pThis (DOM Node | String)
pThat (DOM Node | String)
```

submitEnter(pNd,e)

Submits a page when ENTER is pressed in a text field, setting the request value to the ID of a DOM node (pNd).

Usage is onkeypress="submitEnter(this, event)"

Return Value

Not applicable.

Parameters

pNd (DOM node | String | Array)

\$f_SetValueSequence(pArray,pMultiple)

Sets array of form item (pArray) to sequential number in multiples of (pMultiple).

Return Value

Not applicable.

Parameters

pArray (Array) pMultiple (Number)

\$dom_AddTag(pThis, pTag, pText)

Inserts the html element (pTag) as a child node of a DOM node (pThis) with the innerHTML set to (pText).

Return Value

DOM node

Parameters

```
pThis (DOM node | string ID )
pTag (String)
pText (String)
```

\$tr_AddTD(pThis,pText)

Appends a table cell to a table row (pThis). And sets the content to (pText).

Return Value

(DOM node)

Parameters

pThis (DOM node | string ID) pText (String)

\$tr_AddTH(pThis,pText)

Appends a table cell to a table row (pThis). And sets the content to (pText).

Return Value

DOM node

Parameters

pThis (DOM node | string ID) pTest (String)

\$dom_AddInput(pThis,pType,pId,pName,pValue)

Inserts the html form input element (pType) as a child node of a DOM node (pThis) with an id (pId) and name (pName) value set to pValue.

Return Value

(DOM node)

Parameters

pThis (DOM node | string ID) pType (String) pId (String) pName (String) pValue (String)

\$dom_MakeParent(p_Node,p_Parent)

Takes a DOM node (p_Node) and makes it a child of DOM node (p_Parent) and then returns the DOM node (pNode).

Return Value

(DOM node)

Parameters

p_This (DOM node | string ID) p_Parent (DOM node | string ID)

\$x_RowHighlight(pThis, pColor)

Give an table row DOM element (pThis), this function sets the background of all table cells to a color (pColor). A global variable gCurrentRow is set to pThis.

Return Value

Not applicable.

Parameters

pThis (DOM node | String) pColor(String)

\$x_RowHighlightOff(pThis)

Give an table row Dom node (pThis), this function sets the background of all table cells to NULL.

Return Value

Not applicable.

Parameters

pThis (DOM Element | String)

\$v_Upper(pNd)

Sets the value of a form item (pNd) to uppercase.

Return Value

Not applicable.

Parameters

pNd (DOM Node | String)

\$d_Find(pThis,pString,pTags,pClass)

Hides child nodes of a Dom node (pThis) where the child node's inner HTML matches any instance of pString. To narrow the child nodes searched by specifying a tag name (pTag) or a class name (pClass). Note that the child node will be set to a block level element when set to visible.

Return Value

Not applicable.

Parameters

pThis (DOM node | String) pString (String) pTags (String pClass (String)

returnInput(p_R, p_D)

Sets DOM node in the global variables returnInput (p_R) and returnDisplay (p_D) for use in populating items from popups.

Return Value

Not applicable.

Parameters

p_R (DOM node | String) p_R (DOM node | String)

setReturn(p_R,p_D)

Sets DOM items in the global variables returnInput (p_R) and returnDisplay (p_D) for use in populating items from popups.

Return Value

Not applicable.

Parameters

p_R

p_D

\$f_First_field(pNd)

Places the user focus on the a form item (pNd). If pNd is not found then this function places focus on the first found user editable field.

Return Value

true (if successful)

Parameters

pNd

GetCookie (pName)

Returns the value of cookie name (pName).

Return Value

Not applicable.

Parameters

pName (String)

SetCookie (pName,pValue)

Sets a cookie (pName) to a specified value (pValue).

Return Value

Not applicable.

Parameters

pName (String) pValue (String)

APEX_PLSQL_JOB

You can use APEX_PLSQL_JOB package to run PL/SQL code in the background of your application. This is an effective approach for managing long running operations that do not need to complete for a user to continue working with your application.

Topics in this section include:

- JOBS_ARE_ENABLED Function
- PURGE_PROCESS Procedure
- SUBMIT_PROCESS Function
- TIME_ELAPSED Function
- UPDATE_JOB_STATUS Procedure

JOBS_ARE_ENABLED Function

Call this function to determine whether or not the database is currently in a mode that supports submitting jobs to the APEX_PLSQL_JOB package.

Syntax

```
APEX_PLSQL_JOB.JOBS_ARE_ENABLED
RETURN BOOLEAN;
```

Parameters

None.

Example

The following example shows how to use the JOBS_ARE_ENABLED function. In the example, if the function returns TRUE the message 'Jobs are enabled on this database instance' is displayed, otherwise the message 'Jobs are not enabled on this database instance' is displayed.

```
BEGIN
    IF APEX_PLSQL_JOB.JOBS_ARE_ENABLED THEN
       HTP.P('Jobs are enabled on this database instance.');
    ELSE
       HTP.P('Jobs are not enabled on this database instance.');
   END IF;
END;
```

PURGE_PROCESS Procedure

Call this procedure to clean up submitted jobs. Submitted jobs stay in the APEX_ PLSQL_JOBS view until either Oracle Application Express cleans out those records, or you call PURGE_PROCESS to manually remove them.

Syntax

```
APEX_PLSQL_JOB.PURGE_PROCESS (
   p_job IN NUMBER);
```

Parameters

Table 10–1 describes the parameters available in the PURGE_PROCESS procedure.

Table 10-1 PURGE_PROCESS Parameters

Parameter	Description
p_job	The job number that identifies the submitted job you wish to purge.

Example

The following example shows how to use the PURGE_PROCESS procedure to purge the submitted job identified by a job number of 161. You could also choose to purge all or some of the current submitted jobs by referencing the APEX_PLSQL_JOBS view.

```
BEGIN
    APEX_PLSQL_JOB.PURGE_PROCESS (
        p_job => 161);
END;
```

SUBMIT_PROCESS Function

Use this procedure to submit background PL/SQL. This procedure returns a unique job number. Because you can use this job number as a reference point for other procedures and functions in this package, it may be useful to store it in your own schema.

Syntax

```
APEX_PLSQL_JOB.SUBMIT_PROCESS (
   p_sql IN VARCHAR2,
   p_when IN DATE DEFAULT SYSDATE,
   p_status IN VARCHAR2 DEFAULT 'PENDING')
RETURN NUMBER;
```

Parameters

Table 10–2 describes the parameters available in the SUBMIT_PROCESS function.

Table 10–2 SUBMIT_PROCESS Parameters

Parameter	Description
p_sql	The process you wish to run in your job. This can be any valid anonymous block, for example:
	'BEGIN <your code=""> END;' or 'DECLARE <your declaration=""> BEGIN <your code=""> END;'</your></your></your>
p_when	When you want to run it. The default is SYSDATE which means the job will run as soon as possible. You can also set the job to run in the future, for example:
	sysdate + 1 - The job will run in 1 days time.
	sysdate + $(1/24)$ - The job will run in 1 hours time.
	sysdate + $(10/24/60)$ - The job will run in 10 minutes time.
p_status	Plain text status information for this job.

Example

The following example shows how to use the SUBMIT_PROCESS function to submit a background process that will start as soon as possible.

```
DECLARE
   1_sql VARCHAR2(4000);
   1_job NUMBER;
   1_sql := 'BEGIN MY_PACKAGE.MY_PROCESS; END;';
    l_job := APEX_PLSQL_JOB.SUBMIT_PROCESS(
       p_sql \Rightarrow l_sql
       p_status => 'Background process submitted');
    --store l_job for later reference
END;
```

TIME_ELAPSED Function

Use this function to determine how much time has elapsed since the job was submitted.

Syntax

```
APEX_PLSQL_JOB.TIME_ELAPSED(
   p_job IN NUMBER)
RETURN NUMBER;
```

Parameters

Table 10–3 describes the parameters available in the ${\tt TIME_ELAPSED}$ function.

Table 10–3 TIME_ELAPSED Parameters

Parameter	Description
p_job	The job ID for the job you wish to see how long since it was submitted.

Example

The following example shows how to use the TIME_ELAPSED function to get the time elapsed for the submitted job identified by the job number 161.

```
DECLARE
   1_time NUMBER;
   1_time := APEX_PLSQL_JOB.TIME_ELAPSED(p_job => 161);
END;
```

UPDATE_JOB_STATUS Procedure

Call this procedure to update the status of the currently running job. This procedure is most effective when called from the submitted PL/SQL.

Syntax

```
APEX_PLSQL_JOB.UPDATE_JOB_STATUS (
   p_job IN NUMBER,
   p_status IN VARCHAR2);
```

Parameters

Table 10–4 describes the parameters available in the UPDATE_JOB_STATUS procedure.

Table 10-4 UPDATE_JOB_STATUS Parameters

Parameter	Description
p_job	Passed the reserved word JOB. When this code is executed it will have visibility to the job number via the reserved word JOB.
p_status	Plain text that you want associated with
	JOB: p_job.

Example

The following example shows how to use the UPDATE_JOB_STATUS procedure. In this example, note that:

- Lines 002 to 010 run a loop that inserts 100 records into the emp table.
- APP_JOB is referenced as a bind variable inside the VALUES clause of the INSERT, and specified as the p_job parameter value in the call to UPDATE_JOB_STATUS.
- APP_JOB represents the job number which will be assigned to this process as it is submitted to APEX_PLSQL_JOB. By specifying this reserved item inside your process code, it will be replaced for you at execution time with the actual job number.
- Note that this example calls to UPDATE_JOB_STATUS every ten records, inside the block of code. Normally, Oracle transaction rules dictate updates made inside code blocks will not be seen until the entire transaction is committed. The APEX_ PLSQL_JOB.UPDATE_JOB_STATUS procedure, however, has been implemented in such a way that the update will happen regardless of whether or not the job succeeds or fails. This last point is important for two reasons:
 - Even if your status shows "100 rows inserted", it does not mean the entire operation was successful. If an error occurred at the time the block of code tried to commit, the user_status column of APEX_PLSQL_JOBS would not be affected because status updates are committed separately.
 - 2. Updates are performed autonomously. You can view the job status before the job has completed. This gives you the ability to display status text about ongoing operations in the background as they are happening.

```
BEGIN
    FOR i IN 1 .. 100 LOOP
        INSERT INTO emp(a,b) VALUES (:APP_JOB,i);
```

```
IF MOD(i,10) = 0 THEN
          APEX_PLSQL_JOB.UPDATE_JOB_STATUS(
             P_JOB => :APP_JOB,
             P_STATUS => i || ' rows inserted');
       END IF;
       APEX_UTIL.PAUSE(2);
   END LOOP;
END;
```

11

APEX_LANG

You can use ${\tt APEX_LANG}$ API to translate messages.

Topics in this section include:

- LANG Function
- MESSAGE Function

LANG Function

This function is used to return a translated text string for translations defined in dynamic translations.

Syntax

```
APEX_LANG.LANG (
   p_primary_text_string IN VARCHAR2 DEFAULT NULL,
   p0 IN VARCHAR2 DEFAULT NULL,
   p1 IN VARCHAR2 DEFAULT NULL,
   p2 IN VARCHAR2 DEFAULT NULL,
   p9 IN VARCHAR2 DEFAULT NULL,
   p_primary_language IN VARCHAR2 DEFAULT NULL)
RETURN VARCHAR2;
```

Parameters

Table 11–1 describes the parameters available in the APEX_LANG.LANG function.

Table 11-1 LANG Parameters

Parameter	Description
p_primary_text_string	Text string of the primary language. This will be the value of the Translate From Text in the dynamic translation.
p_p0 through p_p9	Dynamic substitution value: p0 corresponds to 0% in the translation string; p1 corresponds to 1% in the translation string; p2 corresponds to 2% in the translation string, and so on.
p_primary_language	Language code for the message to be retrieved. If not specified, Oracle Application Express uses the current language for the user as defined in the Application Language Derived From attribute.
	See also: Specifying the Primary Language for an Application in the <i>Oracle Application Express Application Builder User's Guide</i> .

Example

Suppose you have a table that defines all primary colors. You could define a dynamic message for each color and then apply the LANG function to the defined values in a query. For example:

```
SELECT APEX_LANG.LANG(color)
FROM my_colors
```

If you were running the application in German, RED was a value for the color column in the my_colors table, and you defined the German word for red, the previous example would return ROT.

MESSAGE Function

Use this function to translate text strings (or messages) generated from PL/SQL stored procedures, functions, triggers, packaged procedures, and functions.

Syntax

```
APEX_LANG.MESSAGE (
    p_name IN VARCHAR2 DEFAULT NULL,
    p0 IN VARCHAR2 DEFAULT NULL,
    p1 IN VARCHAR2 DEFAULT NULL,
    p2 IN VARCHAR2 DEFAULT NULL,
    ...
    p9 IN VARCHAR2 DEFAULT NULL,
    p_lang IN VARCHAR2 DEFAULT NULL)

RETURN VARCHAR2;
```

Parameters

Table 11–2 describes the parameters available in the APEX_LANG.MESSAGE function.

Table 11-2 MESSAGE Parameters

Parameter	Description
p_name	Name of the message as defined in Shared Components > Text Messages of your application in Oracle Application Express.
p_p0 through p_p9	Dynamic substitution value: p0 corresponds to 0% in the translation string; p1 corresponds to 1% in the translation string; p2 corresponds to 2% in the translation string, and so on.
p_lang	Language code for the message to be retrieved. If not specified, Oracle Application Express uses the current language for the user as defined in the Application Language Derived From attribute.
	See also: Specifying the Primary Language for an Application in the <i>Oracle Application Express Application Builder User's Guide</i> .

Example

The following example assumes you have defined a message called GREETING_MSG in your application in English as Good morning%0 and in German as Guten Tag%1. The following example demonstrates how you could invoke this message from PL/SQL:

```
BEGIN
--- Print the greeting
--
APEX_LANG.MESSAGE('GREETING_MSG', V('APP_USER'));
END;
```

How the p_lang attribute is defined depends on how the Application Express engine derives the Application Primary Language. For example, if you are running the application in German and the previous call is made to the APEX_LANG.MESSAGE API, the Application Express engine first looks for a message called GREETING_MSG with a LANG_CODE of de. If it does not find anything, then it will revert to the Application Primary Language attribute. If it still does not find anything, the Application Express engine looks for a message by this name with a language code of en-us.

See also: Specifying the Primary Language for an Application in the Oracle Application Express Application Builder User's Guide.
